**Volume 10099**

Proceedings of SPIE 0277-786X, V. 10099

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at [SPIDigitalLibrary.org](http://SPIDigitalLibrary.org).

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Physics, Simulation, and Photonic Engineering of Photovoltaic Devices VI*, edited by Alexandre Freundlich, Laurent Lombez, Masakazu Sugiyama, Proceedings of SPIE Vol. 10099 (SPIE, Bellingham, WA, 2017) seven-digit Article CID Number.

Copying of material in this book for internal or personal use, or for the internal or personal use of specific clients, beyond the fair use provisions granted by the U.S. Copyright Law is authorized by SPIE subject to payment of copying fees. The Transactional Reporting Service base fee for this volume is \$18.00 per article (or portion thereof), which should be paid directly to the Copyright Clearance Center (CCC), 222 Rosewood Drive, Danvers, MA 01923. Payment may also be made electronically through CCC Online at [copyright.com](http://copyright.com). Other copying for republication, resale, advertising or promotion, or any form of systematic or multiple reproduction of any material in this book is prohibited except with permission in writing from the publisher. The CCC fee code is 0277-786X/17/\$18.00.

Printed in the United States of America

Publication of record for individual papers is online in the SPIE Digital Library.

---

**Paper Numbering:** *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

# Contents

v	<i>Authors</i>
vii	<i>Conference Committee</i>

---

## EMERGING AND NON-CONVENTIONAL DEVICES

---

10099 0A	<b>Spectral and angular-selective thermal emission from gallium-doped zinc oxide thin film structures</b> [10099-9]
----------	---

---

## ADVANCES IN MATERIALS FOR PV

---

10099 0B	<b>Device physics of Cu(In,Ga)Se<sub>2</sub> solar cells for long-term operation (Invited Paper)</b> [10099-10]
10099 0D	<b>(110) cubic and (100) rhombohedral Ge crystal formation on glass using Al-induced crystallization</b> [10099-12]

---

## INTERMEDIATE BAND SOLAR CELLS

---

10099 0H	<b>Influence of Si doping on InAs/GaAs quantum dot solar cells with AlAs cap layers</b> [10099-16]
10099 0I	<b>Multiband modification of III-V dilute nitrides for IBSC application</b> [10099-17]

---

## HOT CARRIER SOLAR CELLS

---

10099 0K	<b>Hot carrier cooling mechanisms in multiple quantum wells</b> [10099-19]
10099 0L	<b>Electrical characteristics and hot carrier effects in quantum well solar cells</b> [10099-20]
10099 0N	<b>Modeling and characterization of double resonant tunneling diodes for application as energy selective contacts in hot carrier solar cells</b> [10099-22]

---

## LIGHT MANAGEMENT I

---

10099 0S	<b>Comparative study of absorption efficiency of inclined and vertical InP nanowires</b> [10099-27]
10099 0U	<b>Plasmonic quantum dot solar concentrator</b> [10099-29]

---

## ADVANCES IN MODELING AND CHARACTERIZATION II

---

- 10099 0X **Minibands modeling in strain balanced InGaAs/GaAs/GaAsP cells** [10099-32]
- 10099 0Z **Characterisation of multi-junction solar cells by mapping of the carrier transport efficiency using luminescence emission** [10099-34]
- 10099 10 **Optoelectronic engineering of colloidal quantum-dot solar cells beyond the efficiency black hole: a modeling approach** [10099-35]

---

## LIGHT MANAGEMENT II

---

- 10099 12 **Broadband absorption enhancement in amorphous Si solar cells using metal gratings and surface texturing** [10099-37]
- 10099 15 **Effects of intermediate plasmonic structures on the performance of ultra-thin-film tandem solar cells** [10099-40]

---

## POSTER SESSION

---

- 10099 17 **Selective optical contacting for solar spectrum management** [10099-42]
- 10099 18 **Multifunctional TiN nanowires for wide band absorption in organic solar cells** [10099-43]
- 10099 1A **Application of concentrating plasmonic luminescent down-shifting layers for photovoltaic devices** [10099-45]
- 10099 1C **MIMIM photodetectors using plasmonically enhanced MIM absorbers** [10099-47]
- 10099 1D **Optical analysis of Si-tapered nanowires/low band gap polymer hybrid solar cells** [10099-48]
- 10099 1F **Temperature dependence of quantum-wire intermediate-band solar cells** [10099-50]
- 10099 1G **Impact of natural photosensitizer extraction solvent upon light absorbance in dye-sensitized solar cells** [10099-51]
- 10099 1H **Temperature effect of natural organic extraction upon light absorbance in dye-sensitized solar cells** [10099-52]
