Volume 10489

Proceedings of SPIE, 1605-7422, V. 10489

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at [SPIDigitalLibrary.org](http://SPIDigitalLibrary.org).

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Optical Biopsy XVI: Toward Real-Time Spectroscopic Imaging and Diagnosis*, edited by Robert R. Alfano, Stavros G. Demos, Proceedings of SPIE Vol. 10489 (SPIE, Bellingham, WA, 2018) Seven-digit Article CID Number.

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

# Contents

vii	<i>Authors</i>
ix	<i>Conference Committee</i>

---

## SESSION 1 TOWARDS MID-INFRARED OPTICAL BIOPSY I

---

10489 05	Mid-infrared fiber-coupled supercontinuum spectroscopic imaging using a tapered chalcogenide photonic crystal fiber (Invited Paper) [10489-4]
----------	---

---

## SESSION 2 TOWARDS MID-INFRARED OPTICAL BIOPSY II

---

10489 0A	Automated pre-processing and multivariate vibrational spectra analysis software for rapid results in clinical settings [10489-9]
----------	--

---

## SESSION 3 SPECTROSCOPIC INSTRUMENTATION AND DESIGNS

---

10489 0B	In vivo, noncontact, real-time, optical and spectroscopic assessment of the immediate local physiological response to spinal cord injury in a rat model [10489-10]
10489 0C	Multi-color autofluorescence and scattering spectroscopy provides rapid assessment of kidney function following ischemic injury (Invited Paper) [10489-11]
10489 0D	Calibration-free technique for the measurement of oxygen saturation changes in muscles of marine mammals and its proof of concept [10489-12]
10489 0E	In-vivo fluorescence detection of breast cancer growth factor receptors by fiber-optic probe [10489-13]
10489 0F	In vivo measurements of optical properties of human muscles with visible and near infrared reflectance spectroscopy [10489-14]

---

## SESSION 4 IMAGING INSTRUMENTATION AND DESIGNS

---

10489 0J	Novel fiber optic-based needle redox imager for cancer diagnosis [10489-18]
10489 0K	Colorectal cancer detection by hyperspectral imaging using fluorescence excitation scanning [10489-19]
10489 0M	A colinear backscattering Mueller matrix microscope for reflection Muller matrix imaging [10489-21]

10489 0N Noninvasive optical monitoring multiple physiological parameters response to cytokine storm [10489-22]

---

SESSION 5 APPLICATIONS OF OPTICAL BIOPSY I

---

10489 0O Towards real-time non contact spatial resolved oxygenation monitoring using a multi spectral filter array camera in various light conditions [10489-23]

---

SESSION 6 APPLICATIONS OF OPTICAL BIOPSY II

---

10489 0T Statistical analysis and machine learning algorithms for optical biopsy [10489-28]

---

SESSION 7 SPECTROSCOPIC METHODS I

---

10489 0X Characterization and discrimination of human breast cancer and normal breast tissues using resonance Raman spectroscopy (Invited Paper) [10489-32]

---

SESSION 8 SPECTROSCOPIC METHODS II

---

10489 14 Near infrared spectroscopy of human muscles [10489-39]

10489 15 Developing visible and near-infrared reflectance spectroscopy to detect changes of the dermal collagen concentration [10489-40]

10489 16 Application of wavelet based MFDFA on Mueller matrix images for cervical pre-cancer detection [10489-41]

10489 17 Stokes shift spectroscopy for the early diagnosis of epithelial precancers in DMBA treated mouse skin carcinogenesis [10489-42]

10489 18 Fermat single pixel camera for characterizing optical properties of biological tissues over the visible to SWIR spectral range [10489-43]

---

POSTER SESSION

---

10489 19 A pilot study for distinguishing chromophobe renal cell carcinoma and oncocytoma using second harmonic generation imaging and convolutional neural network analysis of collagen fibrillar structure [10489-44]

10489 1B Fluorescence spectroscopy for throat cancer detection using human saliva [10489-46]

10489 1C Resonance Raman imaging for detecting and monitoring molecular pathological changes in human brain tumors related to Warburg effect [10489-47]

- 10489 1E Alzheimer's disease evaluation using label-free, stainless, fluorescence to measure tryptophan metabolism along the kynurenine pathway [10489-49]
- 10489 1F Thermographic analysis of photodynamic therapy with intense pulsed light and needle-free injection photosensitizer delivery: an animal study [10489-50]
- 10489 1G Intrinsic fluorescence based in-vivo detection of cervical precancer with hand held prototype device [10489-51]
