

PROCEEDINGS OF SPIE

Physics, Simulation, and Photonic Engineering of Photovoltaic Devices VII

**Alexandre Freundlich
Laurent Lombez
Masakazu Sugiyama**
Editors

**31 January–1 February 2018
San Francisco, California, United States**

Sponsored and Published by
SPIE

Volume 10527

Proceedings of SPIE 0277-786X, V. 10527

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Physics, Simulation, and Photonic Engineering of Photovoltaic Devices VII*, edited by Alexandre Freundlich, Laurent Lombez, Masakazu Sugiyama, Proceedings of SPIE Vol. 10527 (SPIE, Bellingham, WA, 2018) Seven-digit Article CID Number.

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v	Authors
vii	Conference Committee

SESSION 1	PEROVSKITES-BASED SOLAR CELLS
10527 02	Photophysics of organic-inorganic hybrid perovskite solar cells (Invited Paper) [10527-16]
10527 04	Determination of transport properties in optoelectronic devices by time-resolved fluorescence imaging [10527-18]
SESSION 2	LOW DIMENSION AND HIGH-EFFICIENCY CONCEPT
10527 07	Locally grown Cu(In,Ga)Se₂ micro islands for concentrator solar cells [10527-7]
SESSION 3	ADVANCES IN MULTI-JUNCTION DEVICES
10527 0A	AllInAsSb for GaSb-based multi-junction solar cells [10527-10]
10527 0C	Design of wide bandgap (1.7 eV-1.9 eV) III-V dilute nitride quantum-engineered solar cells for tandem application with silicon [10527-12]
10527 0D	Type-II GaAsSb/GaAsN superlattice solar cells [10527-13]
10527 0E	Characterization of InGaAs/GaAsN multiple quantum well with flat conduction band for improving carrier transport in multijunction solar cell [10527-14]
SESSION 4	EMERGING AND NON-CONVENTIONAL DEVICES
10527 0G	Two-step photon up-conversion solar cell: propose and demonstration (Invited Paper) [10527-1]
10527 0I	A smart solar energy collecting device [10527-3]
SESSION 5	LIGHT MANAGEMENT
10527 0K	Scattering directionality of high refractive index dielectric particles: a note for solar energy harvesting [10527-20]
10527 0L	Random textured silicon oxide nanocones for high-performance thin silicon solar cells [10527-21]

10527 ON **Mathematical simulation of efficiency of various shapes of solar panels for NASA geostationary satellites** [10527-23]

10527 OO **A linear solar cell array for prolonged and high-value light capture** [10527-24]

SESSION 6 ADVANCES IN INTERMEDIATE-BAND SOLAR CELLS

10527 OP **Improved photovoltaic properties of ZnTeO-based intermediate band solar cells (Invited Paper)** [10527-25]

10527 OR **Non-ideal nanostructured intermediate band solar cells with an electronic ratchet** [10527-27]

10527 OS **Quantitative analysis of InAs quantum dot solar cells by photoluminescence spectroscopy** [10527-28]

POSTER SESSION

10527 OV **Simple scalable fabrication method of wide-angle black silicon surface for energy-harvesting applications** [10527-33]

10527 OX **The role of silanized and capped with TiO₂ gold nanorods of different aspect ratios in co-sensitized DSSCs for transparent windows applications** [10527-35]

10527 10 **Complex epsilon-near-zero metamaterials for broadband light harvesting systems** [10527-38]

10527 13 **Examining the performance of ZrN plasmonic nanostructures in organic solar cells** [10527-41]

10527 14 **Investigation of carrier escape and recombination dynamics in GaAsN/GaAs superlattice and resonantly coupled quantum well solar cells** [10527-42]

10527 15 **Comprehensive study of various light trapping techniques used for sandwiched thin film solar cell structures** [10527-43]

10527 16 **Silicon periodic nanostructures for high efficiency absorption in thin film solar cells** [10527-44]
