Volume 10560

Proceedings of SPIE 0277-786X, V. 10560

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Metro and Data Center Optical Networks and Short-Reach Links*, edited by Atul K. Srivastava, Madeleine Glick, Youichi Akasaka, Proceedings of SPIE Vol. 10560 (SPIE, Bellingham, WA, 2018) Seven-digit Article CID Number.

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v *Authors*
vii *Conference Committee*

SESSION 1 SHORT REACH TRANSMISSION TECHNIQUES

- 10560 02 **The best modulation format for 100G short-reach and metro networks: DMT, PAM-4, CAP, or duobinary? (Invited Paper)** [10560-1]
- 10560 03 **Real-time system based on FPGA for optical communication system (Invited Paper)** [10560-2]
- 10560 04 **DSP technologies in the Stokes vector receivers for short-reach optical transmission systems (Invited Paper)** [10560-3]
- 10560 06 **Experimental investigation of auxiliary management and control channel superimposition for mobile fronthaul in DWDM-PON system (Invited Paper)** [10560-5]

SESSION 2 SHORT REACH NETWORKS I

- 10560 07 **Design and optimization of photonic devices and optical fibers for space-division multiplexing (Invited Paper)** [10560-6]
- 10560 08 **An SOA-integrated EADFB laser for enhancement of modulated light output power and extension of transmission distances (Invited Paper)** [10560-7]
- 10560 09 **Network topology and node connectivity in OPS/OBS photonic switched optical networks** [10560-8]
- 10560 0A **Impact of number of channels on signal transmission in elastic optical network** [10560-9]

SESSION 3 SCALING DATACENTER OPTICAL INTERCONNECTS

- 10560 0B **Scaling optical interconnects to meet the bandwidth density crunch (Invited Paper)** [10560-10]
- 10560 0C **Photonic switching platform for datacenters enabling rapid network reconfiguration (Invited Paper)** [10560-11]
- 10560 0D **Scalable highly flexible WDM switch for ONoC architectures** [10560-12]
- 10560 0E **High-bandwidth density optically interconnected terabit/s boards (Invited Paper)** [10560-13]

10560 OF **Consolidated optical flow switching in cloud data centers (Invited Paper)** [10560-14]

SESSION 4 SHORT REACH NETWORKS II

10560 OG **Large-scale optical node architecture enabling spectral-efficiency maximization in ultra-dense WDM networks** [10560-15]

10560 OH **System and device technologies for coherent optical communications (Invited Paper)** [10560-16]

10560 OI **Using system simulation to evaluate design choices for automotive ethernet over plastic optical fiber** [10560-17]

10560 OJ **DMT visible light communication using commercial RGBA LEDs** [10560-18]

SESSION 5 OPTICAL TRANSCEIVERS AND NOVEL TECHNIQUES I

10560 OK **Optical signal processing using coherent optical frequency combs (Invited Paper)** [10560-19]

10560 ON **Dynamic optical networks based on digital subcarrier multiplexing (Invited Paper)** [10560-22]

SESSION 6 OPTICAL TRANSCEIVERS AND NOVEL TECHNIQUES II

10560 OO **Latest standardization trends for client and networking optical transceivers and its future directions (Invited Paper)** [10560-23]

10560 OP **Demonstration of 153.6-Tbps throughput from 1,536×1,536 optical switch with uniform-loss and cyclic-frequency AWGs (Best Technical Paper Award)** [10560-24]

POSTER SESSION

10560 OT **SDN based in-band adaptive coding by distributed pseudonoise preamble detection in optical networks** [10560-28]

10560 OU **Automated design of add/drop equipment and effective wavelength assignment in complex DWDM networks** [10560-29]

10560 OV **Design and fabrication of restricted mode launching device for high-speed multimode fiber link** [10560-30]

10560 OX **Uplink LTE cascaded priority-based scheduler in IoT and smart grid applications: performance and comparison** [10560-32]
