

PROCEEDINGS OF SPIE

Nonimaging Optics: Efficient Design for Illumination and Solar Concentration XV

**Roland Winston
Eli Yablonovitch**
Editors

**19–20 August 2018
San Diego, California, United States**

Sponsored and Published by
SPIE

Volume 10758

Proceedings of SPIE 0277-786X, V. 10758

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIEDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Nonimaging Optics: Efficient Design for Illumination and Solar Concentration XV*, edited by Roland Winston, Eli Yablonovitch, Proceedings of SPIE Vol. 10758 (SPIE, Bellingham, WA, 2018) Seven-digit Article CID Number.

Copying of material in this book for internal or personal use, or for the internal or personal use of specific clients, beyond the fair use provisions granted by the U.S. Copyright Law is authorized by SPIE subject to payment of copying fees. The Transactional Reporting Service base fee for this volume is \$18.00 per article (or portion thereof), which should be paid directly to the Copyright Clearance Center (CCC), 222 Rosewood Drive, Danvers, MA 01923. Payment may also be made electronically through CCC Online at copyright.com. Other copying for republication, resale, advertising or promotion, or any form of systematic or multiple reproduction of any material in this book is prohibited except with permission in writing from the publisher. The CCC fee code is 0277-786X/18/\$18.00.

Printed in the United States of America

Publication of record for individual papers is online in the SPIE Digital Library.

SPIE. DIGITAL LIBRARY

SPIEDigitalLibrary.org

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v *Authors*
vii *Conference Committee*

SOLAR APPLICATIONS I

- 10758 04 **Efficient geometry of flexible solar panels optimized for the latitude of New York City** [10758-3]
10758 05 **Solar tracking using beam-steering lens arrays** [10758-4]
10758 06 **Two-stage 50X hybrid spectrum splitting CSP/CPV collector with InGaP/GaAs solar cells**
[10758-5]

SOLAR APPLICATIONS II

- 10758 07 **Feasibility study on a novel daylighting system with embedded micro compound parabolic concentrators (CPCs)** [10758-6]
10758 08 **Ray tracing and heat transfer simulation of novel glass-covered XCPC collector** [10758-7]
10758 09 **Increased power collection efficiency of conventional silicon photovoltaic modules with holographic light management techniques** [10758-8]

ILLUMINATION

- 10758 0A **High power modular LED-based illumination system for lithography applications** [10758-11]
10758 0B **Nonimaging optics applications in theater lighting** [10758-14]

ADVANCED TOPIC I

- 10758 0E **Diffusive light scattering and collection for advanced device applications** [10758-17]
10758 0F **Optical simulation-based on flowline method** [10758-27]

10758 OG **A plano-freeform lens pair for shaping laser beams (Invited Paper)** [10758-30]

THERMODYNAMIC APPLICATION

10758 OH **Ultra-high luminescence efficiency as a technology enabler: solar cells, thermophotovoltaics, and optoelectronic refrigerators (Invited Paper)** [10758-18]

10758 OI **Spectral selectivity or nonimaging optics: Which to use for radiative cooling?** [10758-19]

10758 OJ **Prospects for broadband spectrum Raman optical refrigeration** [10758-20]

10758 OK **Flowline analysis of étendue transfer of a wide-angle solar concentrator** [10758-21]

10758 OL **Computational optimization for nonimaging solar concentrators using generalized pattern search** [10758-28]

ADVANCED TOPIC II

10758 ON **Vis-NIR spectral flatness improvement for Laser-Driven Light Sources (LDLS)** [10758-24]

10758 OP **Holographic cap collectors for enhanced mid-day energy production of vertically mounted bifacial photovoltaic modules** [10758-26]
