Volume 10956

Proceedings of SPIE, 1605-7422, V. 10956

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Medical Imaging 2019: Digital Pathology*, edited by John E. Tomaszewski, Aaron D. Ward, Proceedings of SPIE Vol. 10956 (SPIE, Bellingham, WA, 2019) Seven-digit Article CID Number.

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

vii	<i>Authors</i>
ix	<i>Conference Committee</i>
xi	<i>Awards</i>

KEYNOTE AND MICROSCOPY

10956 04	Automatic microscopic cell counting by use of unsupervised adversarial domain adaptation and supervised density regression [10956-2]
10956 05	Skeleton-based image registration of serial electron microscopy sections [10956-3]

DIAGNOSIS, PROGNOSIS, PREDICTIVE ANALYSIS

10956 06	Scale embedding shared neural networks for multiscale histological analysis of prostate cancer [10956-4]
10956 08	Examining structural patterns and causality in diabetic nephropathy using inter-glomerular distance and Bayesian graphical models [10956-6]
10956 09	A deep learning framework for context-aware mitotic activity estimation in whole slide images [10956-7]
10956 0A	High resolution whole prostate biopsy classification using streaming stochastic gradient descent [10956-8]

PRECISION MEDICINE AND GRADING

10956 0C	Computer aided antibody screening for IHC assay development [10956-10]
10956 0D	Automatic high-grade cancer detection on prostatectomy histopathology images [10956-11]
10956 0E	Automatic detection of small areas of Gleason grade 5 in prostate tissue using CNN [10956-12]

- 10956 0F **Two-tier classifier for identifying small objects in histological tissue classification: experiments with colon cancer tissue mapping** [10956-13]
- 10956 0G **Persistent homology for the automatic classification of prostate cancer aggressiveness in histopathology images** [10956-14]

MACHINE LEARNING TRENDS

- 10956 0H **From patch-level to ROI-level deep feature representations for breast histopathology classification** [10956-15]
- 10956 0I **Cancer detection in mass spectrometry imaging data by dilated convolutional neural networks** [10956-16]
- 10956 0J **Automated multi-class ground-truth labeling of H&E images for deep learning using multiplexed fluorescence microscopy** [10956-17]
- 10956 0K **Detection of squamous cell carcinoma in digitized histological images from the head and neck using convolutional neural networks** [10956-18]
- 10956 0L **Automatic microscopic cell counting by use of deeply-supervised density regression model** [10956-19]

SEGMENTATION AND FEATURE EXTRACTION

- 10956 0M **Joint region and nucleus segmentation for characterization of tumor infiltrating lymphocytes in breast cancer** [10956-20]
- 10956 0N **Adversarial U-net with spectral normalization for histopathology image segmentation using synthetic data** [10956-21]
- 10956 0O **3D profiling of amyloid plaque-associated microglia and neuronal damage on confocal fluorescence images to aid drug discovery in Alzheimer's disease** [10956-22]
- 10956 0P **Machine learning-based approach for fully automated segmentation of muscularis propria from histopathology images of intestinal specimens** [10956-23]
- 10956 0Q **Detection of acini in histopathology slides: towards automated prediction of breast cancer risk** [10956-24]
- 10956 0R **Segmentation of follicles from CD8-stained slides of follicular lymphoma using deep learning** [10956-25]

POSTER SESSION

- 10956 OS **Hyperspectral imaging for intraoperative diagnosis of colon cancer metastasis in a liver**
10956-26]
- 10956 OT **Deep detection and classification of mitotic figures** [10956-27]
- 10956 OU **An investigation of aggregated transfer learning for classification in digital pathology**
[10956-28]
- 10956 OV **Can ImageNet feature maps be applied to small histopathological datasets for the**
classification of breast cancer metastatic tissue in whole slide images? [10956-29]
- 10956 OX **Digital pathology with hyperspectral imaging for colon and ovarian cancer** [10956-32]
- 10956 OZ **Generalization of tumor identification algorithms** [10956-34]
- 10956 11 **A system for one-shot learning of cervical cancer cell classification in histopathology images**
[10956-36]
- 10956 13 **Fragile neural networks: the importance of image standardization for deep learning in digital**
pathology [10956-38]
- 10956 14 **Colorectal tumor identification by transferring knowledge from pan-cytokeratin to H&E** [10956-
39]
- 10956 16 **Cell nuclei segmentation in divergent images using deep learning and stochastic processing**
[10956-41]
- 10956 17 **Computational analysis of cerebrovascular structures imaged using two-photon microscopy**
[10956-42]
