SPIE

Volume 11200

Proceedings of SPIE 0277-786X, V. 11200

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *AOS Australian Conference on Optical Fibre Technology (ACOFT) and Australian Conference on Optics, Lasers, and Spectroscopy (ACOLS) 2019*, edited by Arnan Mitchell, Halina Rubinsztein-Dunlop, *Proceedings of SPIE Vol. 11200* (SPIE, Bellingham, WA, 2019) Seven-digit Article CID Number.

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

xi	<i>Authors</i>
xv	<i>Conference Committee</i>

METASURFACES

11200 07	Second-harmonic spectroscopy with structured beams and the observation of quasi-BIC modes in all-dielectric nanoresonators [11200-2]
11200 08	Tuning the asymmetric response of metasurfaces for optical spatial filtering [11200-3]
11200 0A	Beam shaping in nonlinear volume holograms via optically engineered ferroelectric domain patterns [11200-310]

ATOM OPTICS AND TRAPPING

11200 0C	Trapping ultracold atoms in submicron period magnetic lattices [11200-5]
11200 0D	Flat band modes and compact localised states using Bose-Einstein condensates with spin-orbit coupling in a 2D lattice [11200-6]
11200 0E	Creating big time crystals with ultracold atoms [11200-7]
11200 0F	Towards an Australian Atom-Trap Trace Analysis (ATTA) facility [11200-8]

NANOPHOTONICS AND PLASMONICS

11200 0H	Tailoring directional scattering of second-harmonic generation from (111)-GaAs nanoantennas [11200-10]
11200 0I	Direct plasmonic photodetection of optical angular momentum [11200-11]
11200 0J	Switchable unidirectional second-harmonic emission through GaAs nanoantennas [11200-12]

OPTICAL SENSING I

- 11200 0M A high-bandwidth atomic magnetometer [11200-14]
- 11200 0N Microdiamond-doped lead-silicate glass optical fibre for remote magnetometry [11200-15]
- 11200 0O Gamma irradiation response in photonic crystal and standard optical fiber Bragg grating sensors for radiation dosimetry [11200-16]
- 11200 0P Excimer KrF laser grating imprinting for DFB FL underwater sensing using fibre stepping algorithm [11200-17]

NOVEL MATERIALS

- 11200 0R Orb web spider silks: how their optics affects potential visibility [11200-19]
- 11200 0S Ultra-high-resolution fluorescence images in thin phosphor films [11200-20]
- 11200 0T Towards the next generation of brain/machine interface [11200-21]

OPTICAL SENSING II

- 11200 0W Chalcogenide fibers for infrared sensing [11200-23]
- 11200 0X Multi-point optical fiber pressure sensor [11200-24]
- 11200 0Y Micron scale thermometry using lanthanide doped tellurite glass [11200-25]

QUANTUM I

- 11200 11 Inline multiphoton quantum state tomography [11200-28]
- 11200 12 Squeezing in lithium niobate waveguides [11200-29]
- 11200 13 Two-photon correlations in nonlinear optical systems [11200-30]

FIBRE LASERS

- 11200 16 Mode-locked Holmium fibre laser [11200-33]

- 11200 17 GaN laser diode pumped dysprosium doped ZBLAN fibre laser for yellow emission [11200-34]
- 11200 18 Single frequency thulium fibre distributed Bragg reflector laser [11200-35]
- 11200 19 Hysteresis and bi-stability in an all-fibre laser with saturable absorber [11200-36]

QUANTUM II

- 11200 1C Testing the reality of Wigner's friend's experience [11200-39]
- 11200 1D Quantum random number generation using a solid state single photon source [11200-40]
- 11200 1E Towards long-distance quantum communication using trapped ions and frequency qubits [11200-41]

GLASS LASERS

- 11200 1F Mode-locked chip-lasers with multiple waveguides (Invited Paper) [11200-42]
- 11200 1G High-power single-frequency 620 nm diamond laser [11200-43]
- 11200 1H Passive mode-locked Yb fluorozirconate glass waveguide laser [11200-44]
- 11200 1I Broadly tunable light sources using four-wave mixing in magnesium fluoride microresonators [11200-45]

NONLINEAR

- 11200 1K Polarized spatio-spectral mapping of supercontinua generated in microstructured optical fibre (Invited Paper) [11200-48]
- 11200 1L Pure-quartic solitons from a fibre laser with intracavity pulse-shaper (Invited Paper) [11200-49]
- 11200 1M Enhanced Kerr optical nonlinearity of integrated waveguides incorporating layered GO films [11200-50]

LIDAR

- 11200 1N LiDAR eyes for autonomous vehicles (Invited Paper) [11200-51]
- 11200 1O Fast beam steering and agile wavefront control with an optical phased array [11200-52]
- 11200 1P Discrete electro-optic beam steering for LIDAR [11200-53]
- 11200 1Q Continuous-wave light detection and ranging (LiDAR) using image-reject homodyne detection and PRBS modulation [11200-54]
- 11200 1R Time reversal of optical waves [11200-314]

PHOTONIC CHIPS I

- 11200 1T CMOS-compatible, plasma beam assisted reactive magnetron sputtered silicon nitride films for photonic integrated circuits [11200-56]
- 11200 1U Direct quantum error detection in multiplexed photonic transmission channels [11200-57]
- 11200 1V Advanced multi-functional photonic filters based on integrated cascaded Sagnac loop reflectors [11200-58]
- 11200 1W Vertical directional coupler network using a-Si slope waveguides [11200-59]

MICROSCOPY AND FLUORESCENCE

- 11200 1Y High-resolution molecular spectroscopy and biological applications [11200-61]
- 11200 1Z Tomography of quantum dots in a non-hermitian photonic chip [11200-62]
- 11200 20 Multiple-pass configuration for improved reflection mode confocal system [11200-63]

PHOTONIC CHIPS II

- 11200 23 Sensing and signal processing based on microwave photonics (Invited Paper) [11200-65]
- 11200 24 Novel designs of optoacoustic waveguides [11200-66]
- 11200 25 Graphene oxide waveguide and micro-ring resonator polarizers [11200-67]

LASERS

- 11200 27 Intra-cavity semiconductor laser tuning using a frequency compensating acousto-optic tunable filter pair [11200-68]
- 11200 28 Femtosecond laser inscribed waveguide and micro-**chip laser operation at 1.07 μ m in Yb³⁺** doped germanate glass [11200-69]
- 11200 29 Compact design of Q-switched laser systems based on liquid crystal transducers [11200-70]
- 11200 2A **Ultrafast π -pulses** for strong coherent excitation of a ¹⁷¹Yb⁺ ion [11200-71]

MID-IR

- 11200 2B Mode-locked mid-IR fibre laser based on 2D nanomaterials [11200-73]
- 11200 2C Mid-IR laser for wavefront correction in gravitational wave detectors [11200-74]
- 11200 2D Mid-infrared supercontinuum generation in hybrid chalcogenide/silicon-germanium waveguides (Invited Paper) [11200-75]
- 11200 2E Cascaded mid-IR supercontinuum generation in chalcogenide microstructured optical fibers **from 2 to 10 μ m (Invited Paper)** [11200-76]

ADVANCED TECHNOLOGIES

- 11200 2G Integrated color centers in arrays of silicon carbide micropillars [11200-311]
- 11200 2H Precision measurement of weak transitions from excited states in helium by counting ultracold atoms [11200-317]

APPLICATIONS OF COMBS

- 11200 2K Reconfigurable microwave signal processor for fractional and regular Hilbert transform based on a microcomb [11200-78]
- 11200 2L Continuously tunable orthogonally polarized RF optical single sideband generator based on cascaded micro-ring resonators [11200-79]
- 11200 2M Broadband photonic RF channelization based on an integrated optical micro-comb source [11200-80]
- 11200 2N Photonic wideband RF mixer based on an integrated microcomb source [11200-81]

POSTER SESSION

- 11200 2O Design of CMOS compatible plasmonic color filter for high selectivity [11200-82]
- 11200 2P NIR performance comparison of Bi/Er and Yb/Er co-doped fibres as pumped at 808 nm and 830 nm [11200-83]
- 11200 2Q Distributed fibre optic pressure sensors designed for composite propeller integration [11200-84]
- 11200 2R Nonlinear Fourier transform of second order solitons with closely packed eigenvalues [11200-85]
- 11200 2S Mode matching error signal from radio frequency waist size and position modulation [11200-86]
- 11200 2T A THz Single-Polarization-Single-Mode (SPSM) photonic crystal fiber based on epsilon-near-zero material [11200-87]
- 11200 2U Relationship between threshold gain and Bragg detuning in photonic-crystal surface-emitting lasers [11200-88]
- 11200 2V Fabry-Perot interferometric fibre optic temperature sensor with polyvinylidene fluoride (PVDF) coating [11200-89]
- 11200 2W Eigenvalue analysis of time separated signals using layer-peeling property [11200-90]
- 11200 2X Standardization of FBG sensors in dual-bus fiber networks [11200-91]
- 11200 2Y New approach to find nonlinear Fourier transform of optical signals [11200-92]
- 11200 2Z Control of nonlinear processes in two-photon excited rubidium vapour by resonant laser light [11200-93]
- 11200 30 Toward a new sensing platform based on conducting polymer: thickness measurement and the effect of different oxidant solution on damage threshold [11200-94]
- 11200 31 High precision measurement of optical absorption in low-OH fused silica at 2 micron [11200-95]
- 11200 32 True time delays for phased array antennas based on a microcomb [11200-96]
- 11200 33 Fabrication tolerant planar directional couplers [11200-97]
- 11200 34 Photonic circuits with time delays and quantum feedback using nanofibres and long coupling fibres [11200-98]
- 11200 35 Optomechanical micro-structures for single-crystal diamond [11200-99]
- 11200 36 Parametric design study of monolayer graphene based TeO₂ waveguide saturable absorber [11200-100]

- 11200 37 Unidimensional continuous-variable quantum key distribution with imperfect detector [11200-101]
- 11200 38 Multi-point high temperature optical fiber sensor [11200-102]
- 11200 39 Thermally drawn polycaprolactone fibres with customised cross sections [11200-103]
- 11200 3A High Q RF transversal filter based on an 80-channel integrated microcomb source [11200-104]
- 11200 3B Full-field deformation measurement of a large-rotation object using digital image correlation [11200-105]
- 11200 3C Nanostructured all-silicon photodetector pixels with tailored responsivity spectra [11200-106]
- 11200 3D Distributed fibre optic sensors for the alpine fault of New Zealand [11200-108]
- 11200 3E Parametric design study for waveguide-based graphene MIR photodetectors [11200-109]
- 11200 3F Compact stable fibre-based optical frequency filter [11200-110]
- 11200 3G Injection locking of a pulsed VCSEL [11200-111]
- 11200 3H Single frequency holmium-**doped DBR fibre laser at 2.1 μm** [11200-112]
- 11200 3I Improved location algorithm for high-spatial-resolution in fiber optic line-based sensor [11200-113]
- 11200 3J Design algorithm for compact low-reflection adiabatic photonic mode converters based on constant coupling [11200-114]
- 11200 3K Photoluminescence properties of Er doped AS₂S₃ films deposited using RF co-sputtering and the impact of rapid thermal annealing [11200-115]
- 11200 3M Transmission enhancement in plasmonic nanohole array for colour imaging applications [11200-117]
- 11200 3N The microscope type spectral reflectometry design for large dynamic range thin film thickness measurement in RDL processes [11200-118]
- 11200 3P Feasibility study of THz multiplexer and demultiplexer employing arrayed waveguide gratings [11200-120]
- 11200 3Q Submicron simultaneous IR and Raman microscopy (IR+Raman): breakthrough developments in Optical Photothermal IR (O-PTIR) combined with Raman provide new capabilities [11200-121]
- 11200 3T Optical fiber transmission quality analysis based on FPGA [11200-124]

- 11200 3U Testing QED by measuring a He* tune-out wavelength [11200-315]
- 11200 3V Symmetry breaking: balancing asymmetries [11200-316]
- 11200 3W Highly efficient modulation of upconversion luminescence at a millisecond timescale [11200-324]
