Volume 11226

Proceedings of SPIE, 1605-7422, V. 11226

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Neural Imaging and Sensing 2020*, edited by Qingming Luo, Jun Ding, Ling Fu, Proceedings of SPIE Vol. 11226 (SPIE, Bellingham, WA, 2020) Seven-digit Article CID Number.

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v	<i>Authors</i>
vii	<i>Conference Committee</i>

MICROSCOPY I

11226 04	Two-photon high-speed light-sheet volumetric imaging of brain activity during sleep in zebrafish larvae [11226-3]
11226 06	Adaptive optics two-photon microendoscopy for high-resolution and deep-brain imaging in vivo [11226-5]

HUMAN BRAIN

11226 0B	Fast volumetric mapping of human brain slices (Invited Paper) [11226-10]
11226 0C	Using fNIRS to study the brain activation and networks associated with Chinese character recognition [11226-11]

AWAKE ANIMALS

11226 0G	Miniaturized device for whole cortex mesoscale imaging in freely behaving mice [11226-15]
11226 0I	Mesoscale imaging of neuronal activity coupled with light-evoked motor mapping reveal movement-specific spatiotemporal patterns of cortical activation in awake mice [11226-17]

BRAIN ACTIVITIES I

11226 0V	Optical imaging of prefrontal deficits induced by cocaine: neurons vs dopamine D2-receptor expressing neurons [11226-29]
----------	---

NOVEL TECHNIQUES I

11226 14	Evaluation of skull optical clearing process for longitudinal non-invasive optical imaging [11226-37]
11226 15	Wireless data transfer through biological tissues using near-infrared light: testing skull and skin phantoms [11226-38]

BRAIN ACTIVITIES II

- 11226 17 **Imaging neuronal and astrocytic Ca²⁺ transients and hemodynamic responses evoked by single stimulation in rodent cortex** [11226-40]

DISEASES

- 11226 1F **Label-free sorting of iPS cells during neuronal differentiation using FLIM and multiphoton fluorescence microscopy** [11226-48]

POSTER SESSION

- 11226 1K **In vivo rat brain imaging using a short multimode fiber probe** [11226-53]
- 11226 1Q **Wireless high definition neuroimaging system for fNIRS using a single photosensor** [11226-59]
