

PROCEEDINGS OF SPIE

MIPPR 2019: Automatic Target Recognition and Navigation

Jianguo Liu
Hanyu Hong
Xia Hua
Editors

2–3 November 2019
Wuhan, China

Organized by
Huazhong University of Science and Technology (China)
National Key Laboratory of Science and Technology on Multi-spectral Information Processing
(China)
Wuhan Institute of Technology (China)

Sponsored by
National Key Laboratory of Science and Technology on Multi-spectral Information Processing
(China)
Huazhong University of Science and Technology (China)
Wuhan Institute of Technology (China)
Automation Association of Hubei (China)

Volume 11429

Proceedings of SPIE 0277-786X, V. 11429

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *MIPPR 2019: Automatic Target Recognition and Navigation*, edited by Jianguo Liu, Hanyu Hong, Xia Hua, Proceedings of SPIE Vol. 11429 (SPIE, Bellingham, WA, 2020) Seven-digit Article CID Number.

Paper Numbering: Proceedings of SPIE follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

xiii	<i>Introduction</i>

AUTOMATIC TARGET RECOGNITION AND NAVIGATION

11429 02	Reference image generation for space target recognition on ground-based observation [11429-2]
11429 03	The maritime infrared target detection based on mixture Gaussian background modeling in the Fourier domain [11429-3]
11429 04	A new robust image feature point detector [11429-4]
11429 05	A medical image segmentation method based on SOM and wavelet transforms [11429-5]
11429 08	Ultra-close non-cooperative target measurement method for aircraft in-orbit maintenance mission [11429-9]
11429 09	Inshore ship detection based on improved faster R-CNN [11429-10]
11429 0B	Non-contact pantograph detection and location algorithm for monocular infrared images [11429-13]
11429 0C	A small dim targets detection method with dark-spots interference based on infrared images [11429-14]
11429 0D	Air target tracking method based on spectral unmixing [11429-15]
11429 0F	Center extraction for non-uniform line structured light stripe with wide view field [11429-17]
11429 0G	Semantic image segmentation network based on deep learning [11429-18]
11429 0H	A semantic segmentation method for satellite image change detection [11429-19]
11429 0I	Scale adaptive infrared small target detection with patch contrast measure [11429-20]
11429 0J	Maneuvering dim target detection based on space-time salient graph [11429-21]

- 11429 0K A real-time location algorithm for critical points based on TMS320C6678 [11429-22]
- 11429 0M Combined infrared simulation and pix2pix model for underground target detection [11429-24]
- 11429 0N Realization of real-time detection algorithms for key parts of unmanned aerial vehicle based on support vector machine [11429-25]
- 11429 0P Object detection based on hierarchical visual perception mechanism [11429-28]
- 11429 0Q Location recognition based on image local feature matching [11429-29]
- 11429 0R The research of image segmentation methods for interested area extraction in image matching guidance [11429-30]
- 11429 0S Feature enhanced faster R-CNN for object detection [11429-31]
- 11429 0T A method for centroid extraction based on Faster-RCNN [11429-33]
- 11429 0U An improved detection and tracking method for small dim moving target based on particle filter [11429-34]
- 11429 0W Aircraft detection in remote sensing imagery with lightweight feature pyramid network [11429-36]
- 11429 0X Research on aerial object tracking algorithm based on multi-tracker relay [11429-37]
- 11429 0Y A fast multi-target detection method based on improved YOLO [11429-39]
- 11429 0Z A CNN-based method for adaptive landmark selection in remote sensing image [11429-40]
- 11429 10 Adding identity numbers to deep neural networks [11429-41]
- 11429 12 A general fine-tune method for catastrophic forgetting [11429-43]
- 11429 13 Anti-occlusion target tracking algorithm based on template filtering [11429-44]
- 11429 16 Tiny object detection using multi-feature fusion [11429-51]
- 11429 17 A scale-estimation method based on multi-scale multi-level filter for object detection and tracking [11429-52]
- 11429 18 A tracking method to stabilize a target in the region of inherent noise in an image [11429-53]
- 11429 19 Infrared ship target detection based on the combination of Bayesian theory and SVM [11429-54]

- 11429 1A Joint modeling of operational rules and motion-radiation characteristics of targets recognition [11429-55]
- 11429 1B Image registration and change detection method based on wavelet transform and SURF algorithm [11429-56]
