Volume 11228

Proceedings of SPIE, 1605-7422, V. 11228

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Optical Coherence Tomography and Coherence Domain Optical Methods in Biomedicine XXIV*, edited by Joseph A. Izatt, James G. Fujimoto, Proceedings of SPIE Vol. 11228 (SPIE, Bellingham, WA, 2020) Seven-digit Article CID Number.

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

vii	<i>Authors</i>
ix	<i>Conference Committee</i>

NOVEL LIGHT SOURCES AND THEIR APPLICATIONS

11228 0D	Master-slave principle applied to an electrically-tunable swept source-OCT system [11228-12]
----------	---

BRAIN AND NEURAL IMAGING

11228 0Q	Quantifying changes in murine fetal brain vasculature due to prenatal exposure to teratogens with in utero optical coherence tomography [11228-25]
11228 0S	In vivo imaging of human peripheral nerves using optical coherence tomography compared to histopathology slices [11228-91]

AO AND MICROSCOPIC OCT

11228 0X	In vivo Mirau-type optical coherence microscopy with symmetrical illumination [11228-32]
----------	---

CLINICAL APPLICATIONS

11228 15	Optical coherence tomography for complex diagnosis of vulvar diseases [11228-40]
----------	---

OCT NEW TECHNOLOGY

11228 16	Switchable vertical/horizontal section imaging with line-field confocal optical coherence tomography [11228-41]
11228 19	From master-slave to down-conversion optical coherence tomography [11228-44]

SIGNAL/IMAGE PROCESSING

11228 1G	Virtual multi-directional optical coherence tomography [11228-51]
----------	--

11228 1H **Achieving the ideal point spread in swept source OCT** [11228-52]

FULL FIELD OCT

11228 1Q **Multifrequency-swept optical coherence microscopy for full-field in-vivo intracochlear vibration measurement** [11228-61]

MACHINE LEARNING

11228 20 **Comparison of classification methods of Barret's and dysplasia in the esophagus from in vivo optical coherence tomography images** [11228-71]

NOVEL CONTRAST MECHANISMS

11228 26 **A spectral de-mixing model for triplex in vivo imaging of optical coherence tomography contrast agents** [11228-77]

11228 2C **Quantification of ex vivo tissue activity by short and long time-course analysis of multifunctional OCT signals** [11228-83]

POSTER SESSION

11228 2F **Multimodal optical coherence tomography for quantitative diagnosis of breast cancer subtypes** [11228-86]

11228 2L **840-nm broadband SLED-SOA MOPA source integrated in 14-pin butterfly module with 100+ mW free-space output power** [11228-93]

11228 2M **Application of over-sampling nano-sensitive optical coherence tomography for monitoring corneal internal structural changes in corneal cross-linking** [11228-94]

11228 2N **Combined-SLED source for UHR-OCT and SLO integrated in 14-pin butterfly module** [11228-95]

11228 2O **Segmented OCT data set for depth resolved brain tumor detection validated by histological analysis** [11228-96]

11228 2P **Achromatic phase-shifting method for isolated tissue imaging with video-rate FF-OCT** [11228-97]

11228 2T **Superluminescent diodes of spectral range 730 – 790 nm based on strained SQW heterostructure** [11228-102]

11228 2U **High power low coherent light sources based on superluminescent diodes** [11228-103]

- 11228 2V **Numerical method for axial motion correction in optical coherence tomography** [11228-104]
- 11228 2Z **Transparent media thickness measurement employing low-coherence interferometry and a multi-element array** [11228-108]
- 11228 30 **Development of HR-SD-OCT system using supercontinuum light source and its application in detecting nanoscale changes** [11228-109]
