

PROCEEDINGS OF SPIE

Laser Resonators, Microresonators, and Beam Control XXII

Alexis V. Kudryashov
Alan H. Paxton
Vladimir S. Ilchenko
Andrea M. Armani
Editors

3–6 February 2020
San Francisco, California, United States

Sponsored and Published by
SPIE

Volume 11266

Proceedings of SPIE 0277-786X, V. 11266

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Laser Resonators, Microresonators, and Beam Control XXII*, edited by Alexis V. Kudryashov, Alan H. Paxton, Vladimir S. Ilchenko, Andrea M. Armani, Proceedings of SPIE Vol. 11266 (SPIE, Bellingham, WA, 2020) Seven-digit Article CID Number.

Publication of record for individual papers is online in the SPIE Digital Library.

SPIE. DIGITAL LIBRARY

SPIDigitalLibrary.org

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

ix	<i>Conference Committee</i>

CRYSTALLINE WGM MICRORESONATORS AND APPLICATIONS I

11266 06	Electro-optic based adiabatic frequency conversion in a non-centrosymmetric microresonator [11266-4]
11266 07	High-precision measurement of a propagation loss of low-loss single-mode optical waveguides on lithium niobate on insulator [11266-5]
11266 09	Juggling with light: powerful second-order nonlinear optical effects in whispering gallery resonators (Invited Paper) [11266-7]
11266 0A	Ultra-low loss lithium niobate photonics (Invited Paper) [11266-8]

KERR OPTICAL FREQUENCY MICROCOMBS WITH WGM

11266 0F	Silicon oxynitride microresonators for Kerr frequency combs [11266-13]
11266 0G	Frequency comb generation in non-centrosymmetric optical microresonators [11266-14]
11266 0I	Ultra-high-Q whispering-gallery mode resonators in the pulsed-pump regime [11266-16]

CONFIGURABLE WGM AND EXCITATION

11266 0J	All-optically triggerable organic/inorganic photonic devices (Invited Paper) [11266-17]
11266 0M	Optically tunable on-chip microresonator [11266-20]
11266 0N	Exciting Whispering Gallery Modes in liquid microdrops using sub-micron size tapered fibers [11266-21]

LASERS WITH WGM RESONATORS

11266 0O	780 nm narrow-linewidth self-injection-locked WGM lasers (Invited Paper) [11266-23]
----------	--

- 11266 0P **On-chip Brillouin lasers based on 10 million-Q chalcogenide resonators without direct etch process** [11266-24]
- 11266 0Q **Tunable single-frequency lasing in whispering gallery resonators** [11266-25]

BEAM SHAPING I

- 11266 0Z **Generation of Bessel type beams via phase shifted axicons encoded in geometrical phase elements** [11266-35]

BEAM SHAPING II

- 11266 12 **Dynamic coherent beam combining based on a setup of microlens arrays** [11266-38]

LASER MODE CONTROL

- 11266 13 **Multiline oscillation of Q-switched cavity-dumped CO₂ laser with intracavity diffraction grating** [11266-39]
- 11266 14 **Three-level Nd:YLF Raman laser directly pumped by a beam shaped diode bar** [11266-40]
- 11266 15 **Design of an external cavity semiconductor laser for intra-cavity beam combining** [11266-41]
- 11266 16 **Thermal and population induced lensing in Alexandrite lasers** [11266-42]
- 11266 17 **Dynamically stable lasers from commercial Nd:YAG modules with high beam quality and single-frequency: The correct choice of the fundamental waist size at the rod** [11266-43]
- 11266 18 **Multi-kilowatt fibre laser with azimuthal mode output beam for advanced material processing** [11266-44]

ADAPTIVE OPTICS, LASER DIAGNOSTICS, NONLINEAR PROPAGATION

- 11266 19 **Applicability of small size wavefront correctors to compensate for wavefront distortions in laser systems** [11266-45]
- 11266 1A **M-squared laser measurement as simple as measuring laser power** [11266-46]
- 11266 1B **Focusing laser beam through pinhole using stacked-actuator deformable mirror** [11266-47]

POSTER SESSION

- 11266 1D **Extra-cavity laser beam shaping using an Nd: YAG amplifier [11266-49]**
- 11266 1E **Versatile bio-organism detection using microspheres for future biodegradation and bioremediation studies [11266-50]**
- 11266 1F **Microresonators for compact optical sensors (μ RCOS) for gas detection [11266-51]**
- 11266 1G **A stretched-pulse mode-locked laser source at a central wavelength of 1275 nm [11266-52]**
- 11266 1H **Micro-bottle resonator as sensors using whispering gallery modes [11266-53]**
- 11266 1J **Design of efficient Gauss to top-hat converters using geometrical phase elements inscribed in the glass by femtosecond laser pulses [11266-55]**
- 11266 1L **Miniature bimorph deformable mirror for laser beam shaping [11266-57]**
- 11266 1M **Iron: zinc selenide laser, pumping with pulse width that is shorter than or comparable to the population-inversion lifetime [11266-58]**
