SPIE

Volume 11278

Proceedings of SPIE 0277-786X, V. 11278

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Ultrafast Phenomena and Nanophotonics XXIV*, edited by Markus Betz, Abdulhakem Y. Elezzabi, Proceedings of SPIE Vol. 11278 (SPIE, Bellingham, WA, 2020) Seven-digit Article CID Number.

Copying of material in this book for internal or personal use, or for the internal or personal use of specific clients, beyond the fair use provisions granted by the U.S. Copyright Law is authorized by SPIE subject to payment of copying fees. The Transactional Reporting Service base fee for this volume is \$18.00 per article (or portion thereof), which should be paid directly to the Copyright Clearance Center (CCC), 222 Rosewood Drive, Danvers, MA 01923. Payment may also be made electronically through CCC Online at copyright.com. Other copying for republication, resale, advertising or promotion, or any form of systematic or multiple reproduction of any material in this book is prohibited except with permission in writing from the publisher. The CCC fee code is 0277-786X/20/\$18.00.

Printed in the United States of America

Publication of record for individual papers is online in the SPIE Digital Library.

SPIE. DIGITAL LIBRARY

SPIDigitalLibrary.org

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v	<i>Authors</i>
vii	<i>Conference Committee</i>

2D MATERIALS I

11278 05	Biexcitons do not form in MoS₂ monolayers from optical pumping at 6 K [11278-4]
----------	---

PHOTOVOLTAIC MATERIALS

11278 0A	Ultrafast transient absorption spectroscopic studies of new dumbbell-shaped platinum (Pt) systems composed of "weight" and "bar" chromophores (Invited Paper) [11278-9]
----------	--

THz SPECTROSCOPY I

11278 0F	Terahertz lightwave control of non-equilibrium phases and collective modes in multi-band superconductors (Invited Paper) [11278-14]
11278 0H	Transient photoconductivity and photo-excited carrier dynamics in (Bi_{1-x}In_x)₂Se₃ thin films [11278-16]
11278 0I	Zero-valent Au, Cu, and Sn intercalation into GeS nanoribbons: tailoring ultrafast photoconductive response [11278-17]

CARRIER DYNAMICS IN SEMICONDUCTORS AND NANOSTRUCTURES I

11278 0P	Oxygen vacancy effect on ultra-fast carrier dynamics of perovskite oxide La_{0.7}Sr_{0.3}MnO₃ thin films (Invited Paper) [11278-24]
11278 0R	Pump-probe study of ultrafast response of GaAs photocathodes grown by MOCVD and MBE [11278-26]
11278 0S	k•p-based multiband simulations of non-degenerate two-photon absorption in bulk GaAs [11278-27]

CARRIER DYNAMICS IN SEMICONDUCTORS AND NANOSTRUCTURES II

- 11278 0T **Polarization-dependent absolute-phase-corrected multidimensional coherent spectra of exciton-polaritons** [11278-28]
- 11278 10 **Time-resolved inline digital holography for measurement of optical nonlinear properties of quantum dots on substrates** [11278-35]

PLASMONICS

- 11278 15 **Resonance-enhanced transmission of surface plasmon polariton wave-packets through metal-insulator-metal nanocavities** [11278-40]

ULTRAFAST OPTICAL TECHNIQUES

- 11278 1A **Femtosecond OPCPAs from UV to short-wave IR wavelengths for ultrafast dynamics experiments from condensed matter to atoms, molecules, and clusters** [11278-45]

2D MATERIALS II

- 11278 1C **Coherent dynamics of resonantly excited excitons in monolayers of transition metal dichalcogenides (Invited Paper)** [11278-47]

POSTER SESSION

- 11278 1M **Temperature dependence of interface-state-phonon-assisted carrier relaxation in CdSe quantum dots** [11278-56]
