Volume 11654

Proceedings of SPIE, 1605-7422, V. 11654

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *High-Speed Biomedical Imaging and Spectroscopy VI*, edited by Kevin K. Tsia, Keisuke Goda, Proceedings of SPIE Vol. 11654 (SPIE, Bellingham, WA, 2021) Seven-digit Article CID Number.

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

HIGH-SPEED PHOTOACOUSTIC IMAGING

- 11654 09 High speed super-resolution localization photoacoustic microscopy [11654-28]

HIGH-SPEED MULTIPHOTON IMAGING II

- 11654 0D Fast, sensitive dual-comb CARS spectroscopy with a quasi-dual-comb laser [11654-23]

EMERGING TECHNOLOGIES I

- 11654 0J Single-shot compressed ultrafast photography in the ultraviolet spectral range [11654-9]
- 11654 0L Single-shot real-time optical imaging using compressed optical-streaking ultra-high-speed photography [11654-11]

EMERGING TECHNOLOGIES II

- 11654 0V High-speed tracking of single biomolecules with angstrom localization precision and multicolor imaging capability (Invited Paper) [11654-13]

POSTER SESSION

- 11654 17 Development of a real-time spectral imaging system using in-site micro-LED-based illumination and high-speed micro-camera for endoscopic applications [11654-40]
- 11654 19 Non-invasive high-speed isotopic Raman spectroscopy for biomedical applications [11654-42]
