ISBN: 978-1-60423-143-4

Some format issues inherent in the e-media version may also appear in this print version.

American Nuclear Society

Joint International Topical Meeting on Mathematics & Computations
and Supercomputing in Nuclear Applications
2007

TABLE OF CONTENTS

VOLUME 1

PLENARY SESSION 1: Global Nuclear Energy Partnership & High Performance Simulation

The Global Nuclear Energy Partnership ..... N/A
Dennis Spurgeon

Europe Back in HPC World 1
Jean Gonnord

Recent Progress of Supercomputing Research in Nuclear Science in Japan ..... N/A
Hideo Kaburaki, Tashiki Tajima

PARALLEL ORAL SESSION 1A: Computational Reactor Physics and Particle Transport: Monte Carlo I

A Novel Source Convergence Acceleration Scheme for Monte Carlo Criticality Calculations, Part I: Theory 8
David P. Griesheimer, Bryan E. Toth

Wielandt Acceleration for MCNP5 Monte Carlo Eigenvalue Calculations 29
Forrest Brown

Reactor Simulation with Coupled Monte Carlo and Computational Fluid Dynamics 36
Volkan Seker, Justin W. Thomas, Thomas J. Downar

Information Criteria and Higher Eigenmode Estimation in Monte Carlo Calculations 47
Brian R. Nease, Taro Ueki

Converting Boundary-Representation Solid Models to Half-Space Representation Models for Monte Carlo Analysis 57
J.E. Davis, M.J. Eddy, T.M. Sutton, T.J. Altomari

PARALLEL ORAL SESSION 1B: Computational Medical Applications

A New Electron Energy-Loss Straggling Algorithm in MCNP 71
Lee T. Harding, Anil K. Prinja, H. Grady Hughes

Monte Carlo Modeling of the Elekta Precise Linear Accelerator: Validation of Dose Distribution in a Heterogeneous Water Phantom 84
B. Juste, M.E. Mota, R. Miró, S. Gallardo, G. Verdú

The Use of Monte Carlo Simulation in Improving Reconstruction Quality in Single Photon Emission Computed Tomography 92
Mingshan Sun, Jasmina L. Vujic, Bruce H. Hasegawa

A Computational Dosimetric Comparison Between MCNPX and ATTILA of the Mammosite Radiation Therapy System 101
J.J. Bergman, T.S. Palmer

Impact of Importance Quality in Coupled Electron-Photon-Positron Simulation Using Splitting/Rouletting VR Techniques 114
Benoit Dionne, Alireza Haghighat

PARALLEL ORAL SESSION 1C: High Performance Computing

Experiences Applying Unicore Grid Middleware for Nuclear Simulation Tools Like the 3D Reactor Core Model QUABOX/CUBBOX 127
A. Geiger, J. Luther, G. Ohme, S. Langenbuch, K. Velkov

Unstructured 3D Core Calculations with the Descartes System: Application to the JHR Research Reactor 139
Anne-Marie Baudron, Christoph Döderlein, Pierre Guérin, Jean-Jacques Lautard, Frederic Moreau

Computational Physics of Photon Science 149
Mitsuru Yamagiwa, Sergei Bulanov, Timur Esirkepov, James Koga, Tomohito Otobe, Toshiki Tajima

A Methodology of Structural Analysis for Nuclear Power Plant Size of Assembly Structure 159
M. Tani, N. Nakajima, A. Nishida, Y. Suzuki, H. Matsubara, F. Araya, N. Kushida, O. Hazama, K. Kawasaki

Wave Propagation Algorithms and Adaptive Mesh Refinement for CFD Simulations of Potential Hydrogen Explosions in Nuclear Containment Structures 171
D. Calhoun, H. Paillere

PARALLEL ORAL SESSION 2A: Computational Materials Science: Dislocation Modeling

The Motion of Dislocations in Irradiated Materials 184
Ming Wen, Akiyuki Takahashi, Nasr M. Ghoniem

Atomic-Scale Modeling of Dislocation Dynamics in Environment of Radiation Defects ..... N/A
Yu. N. Osetsky, R.E. Stoller, David J. Bacon

Molecular Dynamics and Quasi-Two Dimensional Dislocation Dynamics Simulations on the Orowan Pinning Mechanism of a Mixed Dislocation in FCC Metals ..... N/A
Mitsuo Itakura, Tomoko Kadoyoshi, Hideo Kaburaki

Discrete Dislocation Dynamics Study and Experimental Validation of the Dislocation – Dispersoids Interactions in PM2000 ..... N/A
B. Bako, D. Weygand, M. Samaras, J.-C. Chen, M. Pouchon, W. Hoffelner, P. Gumbsch

Brownian Motion of Mesoscopic Dislocation Loops ..... N/A
S.L. Dudarev

PARALLEL ORAL SESSION 2B: Computational Thermal Hydraulics

Large Eddy Simulation of Wire Wrapped Fuel Pins I: Hydrodynamics in a Periodic Array 196
Paul Fischer, James Lottes, Andrew Siegel, Giuseppe Palmiotti

A One and Two Dimensional PCICE Based Multiphysics Algorithm for Use in Reactor Core Calculations 204
Lander Ibarra, Brian Lockwood, Cassiano R.E. de Oliveira

Coupled BWR Calculations with the Numerical Nuclear Reactor Software System 222
T. Sofu, J.W. Thomas, D.P. Weber, W.D. Pointer, T.J. Downar

The Need for All-Speed Flow Models for Density Driven Flows in Reactor Safety Simulation ..... N/A
D.A. Knoll, R.A. Berry, R.C. Martineau, V.A. Mousseau

A Demonstration of Conjugate Heat Transfer and Neutron Transport Coupling for an Axisymmetric Gas-Cooled Reactor ..... N/A
Richard Martineau, Glen Hansen, HyeongKae Park, Cassiano de Oliveira

PARALLEL ORAL SESSION 2C: High Performance Computing

P_NFE Component of the UNIC Code 237
M.A. Smith, G. Palmiotti, C. Rabiti, D. Kaushik, A. Siegel, B. Smith, E.E. Lewis

Some Experiments Using Preconditioning Techniques and Second-Order Iterative Methods for the Resolution of the 3D Transient Neutron Diffusion Equation 250
O. Flores, V. Vidal, G. Verdu, R. Miro

Study on the Acceleration of the Neutronics Calculation Based on GPGPU 262
Yasunori Ohoka, Masahiro Tatsumi

High Accuracy Large Scale Monte Carlo and Deterministic Transport Calculations for Critical Systems 270
S. Langenbuch, A. Seubert, W. Zwermann

Comparison of Linear and Quadratic Discontinuous Spatial Finite Element Methods for Parallel SN Transport on Triangles 278
Jae H. Chang, James S. Warsa

PARALLEL ORAL SESSION 3A: Computational Reactor Physics and Particle Transport: Discrete Ordinates

A Quantitative Theory of Angular Truncation Errors in 3-D Discrete Ordinates Calculations 287
Edward W. Larsen, Allan B. Wollaber

Krylov Iterative Methods and Synthetic Acceleration for Transport in Binary Statistical Media 304
Erin D. Fichtl, James S. Warsa, Anil K. Prinja

Coarse Mesh Rebalance Acceleration Revisited: Krylov Preconditioning 314
Han Jong Yoo, Nam Zin Cho

Subcell SN Sweeping for Meshes with Reentrant Cells 325
Frederick N. Gleicher, James S. Warsa, Jim E. Morel, Anil K. Prinja

Solution Algorithms for a PN-1-Equivalent SN Angular Discretization of the Transport Equation in One-Dimensional Spherical Coordinates 332
James S. Warsa, Jim E. Morel

Nonlinear Weighted Flux Methods for Particle Transport Problems in 2D Cartesian Geometry 338
Loren Roberts, Dmitriy Y. Anistratov

PARALLEL ORAL SESSION 3B: Computational Thermal Hydraulics

Eulerian Two-Phase Computational Fluid Dynamics for Boiling Water Reactor Core Analysis 351
W. David Pointer, Adrian Tentner, Tanju Sofu, David Weber, Simon Lo, Andrew Splawski

Extension of the PCICE-FEM Method to Homogeneous, Equilibrium Two-Phase Flow ..... N/A
Ray A. Berry, Richard C. Martineau

Direct Numerical Simulation of Boiling Multiphase Flows: State of the Art Modeling, Algorithmic and Computer Needs 362
R. Nourgaliev, D. Knoll, V. Mousseau, R. Berry

A Parallel Interface Capture Method for Compressible Flows with the TRITON Code ..... N/A
Samuel Kokh

Simulation of Chaotic ABC Flow Using Parallel Modified Nodal Integral Method 375
Suneet Singh, Rizwan Uddin

Numerical Simulation of Sidewall Effects on the Acoustic Field of Transonic Cavity Flow ..... N/A
Zhisong Li, Debashis Basu, Awatef Hamed

PARALLEL ORAL SESSION 3C: Computational Reactor Physics and Particle Transport: Monte Carlo II

Improved Implicit Monte Carlo Schemes Based on the Difference Formulation 385
Richard P. Smedley-Stevenson

A Fokker-Planck Method for Modeling Compton Scattering in Implicit Monte Carlo Simulations 399
Jeffery D. Densmore, James S. Warsa, Jim E. Morel

Transition and Collision Biasing in a Variance Reduction Scheme for Criticality Calculations 409
Stavros Christoforou, J. Eduard Hoogenboom

General Tally Support and Post Processing in a Modern Monte Carlo Transport Code 419
M. Scott McKinley

Particle Population Diagnostics in Iterated-Source Monte Carlo Methods 425
Taro Ueki

The MC21 Monte Carlo Transport Code 436
T.M. Sutton, T.J. Donovan, T.H. Trumbull, P.S. Dobreff, E. Caro, D.P. Griesheimer, L.J. Tyburski, D.C. Carpenter, H. Joo

PLENARY SESSION 2: Nuclear Energy Across the Globe

On the Role of Validated Simulations Within the European Nuclear Fission Technology Platform 441
Dan Gabriel Cacuci

Status of Nuclear Power Program in Far-Eastern Asian Countries ..... N/A
Chang Hyo Kim

Advances in Monte Carlo Methods for Global Reactor Analysis ..... N/A
William Martin

PARALLEL ORAL SESSION 4A: Computational Reactor Physics and Particle Transport: Diffusion Theory

Calculation of the Eigenfunctions and Corresponding Eigenvalues of the Two-Group Diffusion Equation in Heterogeneous Systems 453
C. Demazière, C. Sunde

Performance of the Diffusion and Simplified PN Theories for BWR Pin-by-Pin Fine Mesh Core Analyses 466
Akio Yamamoto, Kenichi Tada, Yasunori Kitamra, Yoshihiro Yamane, Masato Watanabe, Hiroshi Noda

Goal-Oriented hp-Mesh Adaptation for 1-D Multigroup Diffusion Equations 476
Yaqi Wang, Jean Ragusa

Flux-Limited Diffusion Coefficients in Reactor Physics Applications 485
Justin Pounders, Farzad Rahnema, Ronaldo Szilard

3D Whole Core Fine Mesh Multigroup Diffusion Calculations by Domain Decomposition Through Alternate Dissections 495
José-Javier Herrero, Carol Ahnert, Jose-Maria Aragones

PARALLEL ORAL SESSION 4B: Nuclear Reactor Analysis

Modeling and Simulation Needs for Future Generation Reactors 508
H.S. Khalil

High-Fidelity Lattice Physics Capabilities of the SCALE Code System Using TRITON 523
Mark D. DeHart, Ian C. Gauld, Mark L. Williams

New Modelling of LWR Assemblies Using the Apollo2 Code Package 537
J.F. Vidal, O. Litaize, D. Bernard, A. Santamarina, C. Vaglio-Gaudard, R. Tran

VOLUME 2

The ARTEMIS Core Simulator: A Central Component in AREVA NP's Code Convergence Project 553
Andreas Pautz, Hans-Wilhelm Bolloni, Karl-Albert Breith, Rene van Geemert, Jochen Heinecke, Greg Hobson, Stephan Merk, Baptiste Pothet, Florin Curca-Tivig

Experience in Simulation of Startup Measurements in the VVER-440 Reactor Using the KIKO3D Code 573
Gy. Hegyi, A. Keresztúri, Cs. Maráczy

PARALLEL ORAL SESSION 4C: Computational Materials Science: Radiation Damage & Fe-Cr Alloys

Modeling of Irradiation Damage Effects on the Ductility of Metals ..... N/A
A. Arsenlis, B.D. Wirth, W.G. Wolfer

Simulations of Radiation Collision Cascades in Dense Nuclear Materials ..... N/A
K. Nordlund, C. Björkas, N. Juslin, K. Vörtler, L. Malerba, D. Terentyev

Bridging Molecular Dynamics and Kinetic Monte Carlo in Modelling Nuclear Materials ..... N/A
Naoki Soneda, Akiyoshi Nomoto, Akiyuki Takahashi

Thermodynamic Properties of FeCr Potentials and Simulation of Radiation Damage in FeCr ..... N/A
Carolina Björkas

Heterogeneous Precipitation in FeCr Alloys ..... N/A
M. Caro, A. Caro

PARALLEL ORAL SESSION 5A: Computational Reactor Physics and Particle Transport: Kinetics and Time-Dependence

Asymptotic Analysis of Time-Dependent Neutron Transport Coupled with Isotopic Depletion and Radioactive Decay 587
Patrick S. Brantley

A Multi-Scale Approach for the Neutronic Kinetics Equations Using the Mixed Dual Solver MINOS 595
S. Chauvet, A. Nachaoui, A.M. Baudron, J.J. Lautard

Investigation of the Validity of the Point-Kinetic Approximation and of the Break-Frequency Method in 2-D Subcritical Systems 603
C. Sunde, C. Demaziere, I. Pázsit

High Resolution Time Integration for the Spherical Harmonics Equations 614
Ryan G. McClarren, James Paul Holloway

Treatments of Time-Derivatives of Neutron Kinetics Equation for Sub-Critical System with Neutron Source and Monte Carlo Calculation 623
Hiroshi Sekimoto, Kohei Iwanaga, Takamasa Mori

Analytical Benchmarks for the Kinetics of Accelerator-Driven Systems 628
S. Dulla, P. Ravetto, P. Picca, D. Tomatis, J.R. Maiorino, T. Carluccio, A. Antunes, A. Santos, F. de Oliveira , R.S. Santos

PARALLEL ORAL SESSION 5B: Nuclear Reactor Analysis

UNIC: Ultimate Neutronic Investigation Code 640
G. Palmiotti, M. Smith, C. Rabiti, M. Leclere, D. Kaushik, A. Siegel, B. Smith, E.E. Lewis

Use of the APOLLO2 Code for BWR Assembly Analysis 651
Laure Mondelain, Igor Zmijarevic, Jean Michel Do, Veronique Bellanger

The Doppler Defect Benchmark: Overview and Summary of Results 661
Russell D. Mosteller

Simplification of Multi-Group Cross-Section Processing for Large Depletion Calculations in TRITON 674
Mark D. DeHart

TRITON/NEWT Calculation of the CORAIL Assembly for Plutonium Recycling in PWR 683
Francesco Ganda, Miodrag Milosevic, Ehud Greenspan, Temitope Taiwo

Full MOX ABWR Neutron Characterization with Void Increase: The FUBILA Program 711
P. Blaise, N. Thiollay, N. Huot, P. Fougeras, V. Laval, A. Roche

PARALLEL ORAL SESSION 5C: High Performance Computing

Dynamic Load Balancing of Parallel Monte Carlo Transport Calculations Via Spatial Redecomposition ..... N/A
Matthew J. O'Brien

Load Balancing Strategy for Radiation Transport Code EVENT 724
Aliva Pattnaik, Cassiano R. E. de Oliveira

Computer Simulation of Bubble Formation 731
Z. Insepov, T. Bazhirov, G. Norman, V. Stegailov

Domain Decomposition Methods for Core Calculations Using the MINOS Solver 756
Pierre Guerin, Anne-Marie Baudron, Jean-Jacques Lautard

Improved Parallelization of the Modular Ray Tracing in the Method of Characteristics Code DeCart 766
B. Kochunas, T.J. Downar, Mohamed Sayeed, J.W. Thomas

Osiris: A Modern, High-Performance, Coupled, Multi-Physics Code For Nuclear Reactor Core Analysis 778
Richard Procassini, Kyle Chand, Christopher Clouse, Robert Ferencz, Jeffrey Grandy, William Henshaw, Kevin Kramer, Dennis Parsons

POSTER SESSION I: Computational Materials Science

Characteristics of Self-Point Defects and Their Anisotropy Migration in Elastic Stress Fields of Dislocations in FCC Pu 786
N.A. Dubasova, V.M. Chernov, A.B. Sivak

Energetic, Kinetic and Crystallographic Characteristics of Self-Point Defects in Vanadium and Iron Crystals 795
A.B. Sivak, V.M. Chernov, V.A. Romanov

First Principles Calculations on the Grain Boundary Decohesion of Iron and Nickel by Oxygen 807
Masatake Yamaguchi, Hideo Kaburaki

Materials in Extreme Conditions the Critical Phenomena and Phase Transfer in the Dynamic Destruction 817
A.Ya Uchaev, V.T. Punin, N.I. Selchenkova, E.V. Kosheleva

Mechanical Stresses in Fuel Particles and Graphite of High Temperature Reactors 825
B. Boer, A.M. Ougouag, G.K. Miller, J.L. Kloosterman

Molecular Dynamics Simulations of Local Environment Dependence of Self-Interstitial Atom Diffusion in BCC Fe-Cr Alloys ..... N/A
Chao Jiang, S.G. Srivilliputhur, A. Caro, M. Caro, S. Maloy

Self-Point Defects Characteristics and Their Dependence on <1120> {0001} Dislocation Stress Field in Alpha-Zr 841
D.A. Chulkin, V.M. Chernov, A.B. Sivak

Stability of Uncommon Interstitials in Fe 852
D. Terentyev, L. Malerba, P. Klaver, F. Willaime

The Universal Properties of Metals Behavior in the Dynamic Destruction Phenomenon in a Wide Range of Longevity Under the Influence of High-Power Pulses of Radiation 857
V.T. Punin, A.Ya. Uchaev, N.I. Selchenkova, L.A. Platonova, E.V. Kosheleva

Heterogeneous Precipitation in Fe-Cu Alloys ..... N/A
P. Erhart, M. Caro, A. Caro

Computational Analysis of Neutron-Absorbing Structural-Amorphous Metal (SAM) Coatings for Spent Nuclear Fuel (SNF) Container to Enhance Criticality Safety Controls ..... N/A
Jor-Shan Choi, Chuck Lee, Dan Day, Mark Wall, Cheng Saw, Joe Farmer, Moe Boussoufi, Ben Liu, Hal Egbert

POSTER SESSION I: Nuclear Reactor Analysis

Computational Benchmark of the Doppler Reactivity Defect 863
Jeremy L. Conlin

ENDF/B-V, ENDF/B-VI, and ENDF/B-VII.0 Results for the Doppler-Defect Benchmark 870
Russell D. Mosteller

DRAGON Evaluation of the Benchmark for the Doppler Reactivity Defect 878
J. Le Mer, G. Marleau

Application of SUHAM-U Code for Calculation of the Computational Benchmarks for the Doppler Reactivity Defect 890
V.F. Boyarinov, N.V. Sultanov

Analysis of Doppler Reactivity Benchmark ..... N/A
Suhail Ahmad Khan, R. Karthikeyan, V. Jagannathan

Doppler Coefficient of Reactivity - Benchmark Calculations for Different Enrichments of UO2 901
L. Thilagam, C. Sunil Sunny, K.V. Subbaiah, K. Devan, Young-Seok Lee, V. Jagannathan

KENO Continuous Energy Calculations for a Suite of Computational Benchmarks for the Doppler Reactivity Defect 911
Mark D. DeHart, Sedat Goluoglu, Michael E. Dunn

POSTER SESSION I: Computational Reactor Physics and Particle Transport

Optimal Perturbation Size for Matrix Free Newton/Krylov Methods 918
Yunlin Xu, Thomas J. Downar

Earthquakes and Pebble Bed Reactors: Time-Dependent Densification 932
Abderrafi M. Ougouag, Joshua J. Cogliati

Analysis of the Quasidiffusion Method on Two-Dimensional Problems with Spatially Periodic Media 941
Adrian Constantinescu, Dmitriy Y. Anistratov

Reconstruction of the Local Neutron-Physical Functionals in Surface Harmonics Method 952
V.F. Boyarinov, V.A. Nevinitsa

High Power Gamma Ray Source by Radiation Damping 964
James Koga, Mitsuru Yamagiwa

Automatic Differentiation with Code Coupling and Applications to SCALE Modules 974
Bradley T. Rearden, James E. Horwedel

Using Homogenized Macroscopic Group Cross Sections in Continuous-Energy Monte Carlo Neutron Transport Calculations with MCNP 984
J.C. Kuijper, S.C. van der Marcj, A. Hogenbirk

Feasibility of Using a Universal Point Wise Energy Grid or a Very Fine Multi-Group Energy Grid in MORET5 Criticality Calculations 996
Joachim Miss, Olivier Jacquet, Benoit Forestier, Wim Haeck, Bernard Verboomen

An Easy Way to Carry Out 3D Uncertainty Analyses 1007
Alfred Hogenbirk

Analytical Solution of a Simplified Transport Problem with Continuous Energy for Testing Monte Carlo Procedures 1016
J. Eduard Hoogenboom

VHTR Numerical Benchmark Based on the Compact Nuclear Power Source Experiments 1024
Hyung-Kook Joo, Temitope A. Taiwo, Won Sik Yang

A P1 Benchmark for Time Dependent Thermal Radiative Transfer 1036
Ryan G. McClarren, James Paul Holloway, Thomas A. Brunner

PARALLEL ORAL SESSION 6A: Computational Reactor Physics and Particle Transport: Characteristics, Diffusion, Transport, and Hybrid Methods

A Hybrid Monte Carlo-Diffusion Method for Radiation Transport on Adaptive Mesh Refinement-Type Meshes 1045
Jeffery D. Densmore, Thomas M. Evans, Michael W. Buksas

A Hybrid Block-Oriented Discrete Ordinates and Characteristics Method Algorithm for Solving Linear Boltzmann Equation 1057
Ce Yi, Alireza Haghighat

A New Paradigm for Whole Core Neutron Transport Without Homogenization 1079
E.E. Lewis, M.A. Smith, G. Palmiotti

Singular Characteristic Tracking Algorithm for Improved Solution Accuracy of the Discrete Ordinates Method with Isotropic Scattering 1090
Jose I. Duo, Yousry Y. Azmy

VOLUME 3

The Analytical Solution to the Multigroup Diffusion Equation in One-Dimensional Plane, Cylindrical and Spherical Geometries 1101
B.D Ganapol

PARALLEL ORAL SESSION 6B: Nuclear Reactor Analysis

Application of Nodal Equivalence Parameters for Prismatic VHTR Core Analysis 1119
C.H. Lee, Z. Zhong, T.A. Taiwo, W.S. Yang, H.K. Joo

Neutronics Assessment of Stringer Fuel Assembly Designs for the Liquid-Salt-Cooled Very High Temperature Reactor (LS-VHTR) 1130
F.J. Szakaly, T.K. Kim, T.A. Taiwo

Monte Carlo Equilibrium Cycle Analysis of a Deep-Burn MHR Core Charged with Kernel-Based TRISO Fuel 1143
Yonghee Kim, Francesco Venneri

Determination of the Equilibrium Composition of Cores with Continuous Fuel Feed and Removal Using MOCUP 1156
Massimiliano Fratoni, Ehud Greenspan

Sensitivity Analysis of the Kinetic Behaviour of a Gas Cooled Fast Reactor to Variations of the Delayed Neutron Parameters 1168
W.F.G. van Rooijen, D. Lathouwers

PARALLEL ORAL SESSION 6C: Computational Materials Science

Radiation Interaction Analysis for BWR Channel Shadow Corrosion 1183
Ren-Tai Chiang, Aylin Yilmazbayhan

Experimental Benchmarking of Pu Electronic Structure 1192
J.G. Tobin

A Numerical Investigation of the LLNL/AWE/CEA Fragmentation Experiments on HELEN 1212
C.S. Debonnel, J.L. Vierne, F. Bonneau, P. Combis

A Three-Dimensional Meso-Scale Modeling for Helium Bubble Growth in Metals 1218
Tomoaki Suzudo, Hideo Kaburaki, Eiichi Wakai

Synthesis and Performance of Fe-Based Amorphous Alloys for Nuclear Repository Applications ..... N/A
Larry Kaufman, J.H. Perepezko, K Hildal

PARALLEL ORAL SESSION 7A: Computational Reactor Physics and Particle Transport: Cross Sections and Uncertainties

Generation of Multi-Group Cross Sections and Scattering Matrices with the Monte Carlo Code MCNP5 1228
J. Eduard Hoogenboom, Vladimir A. Khotylev, John M. Tholammakkil

Generation of Subgroup Weights Employing Shielded Cross Section Conservation Principle for Representative Pin Cells 1236
Leonid Pogosbekyan, Han Gyu Joo, Chang Hyo Kim, Kang Seog Kim

Evaluation of BWR Core Attributes Uncertainties due to Multigroup Cross Section Uncertainties 1254
Matthew A. Jessee, Hany S. Abdel-Khalik, Paul J. Turinsky

ENDF/B-VII.0, ENDF/B-VI, JEFF-3.1, and JENDL-3.3 Results for Unreflected Plutonium Solutions and MOX Lattices 1269
Russell D. Mosteller

Effects of Uncertainties in Lead Cross Section Data in Monte Carlo Analysis of Lead Cooled and Reflected Reactors 1277
Miodrag Milosevic, Ehud Greenspan, Jasmina Vujic

PARALLEL ORAL SESSION 7B: Nuclear Reactor Analysis

Investigations on the Migration Mode Method (MMM) for Reactor Calculations 1284
Aldo Dall'Osso, Augusto Gandini, Rossella Rotella

A PWR Assembly Computational Scheme Based on the DRAGON v4 Lattice Code 1296
R. Le Tellier, A. Hebert

The Calculation of Resonance Parameters for the DeCART MOC Code 1309
Yunlin Xu, Zhenjia Gao, Thomas Downar

LPPF Prediction in a BWR Fuel Lattice Using Artificial Neural Networks 1326
Jose L. Montes, Juan J. Ortiz, Juan L. François, Cecilia M. Martín-del-Campo

BWR Stability and Bifurcation Analysis Using a Novel Reduced Order Model (Impact of Model Modifications) ..... N/A
C. Lange, D. Hennig, V. Garcia i Llorens

PARALLEL ORAL SESSION 7C: Computational Materials Science

Advances in the Density Functional Calculations of Structures and Dynamics of Defects in Nuclear Materials ..... N/A
C. Domain

Stability and Mobility of Self-Interstitial Atoms and their Clusters in Fe-Cr Alloys: An Atomic-Level Study 1336
D.A. Terentyev, L. Malerba, P. Klaver, P. Olsson

Finite-Temperature Simulation Based on the Lanczos Algorithm for Low-Dimensional Strongly Correlated Electron Systems; High-Temperature Superconducting Cuprates 1342
Toru Sakai

Ab Initio Determination of Cr Interactions with Point Defects in BCC Fe ..... N/A
P. Olsson, C. Domain, J. Wallenius

Parallel Kinetic Monte Carlo ..... N/A
E. Martinez, J. Marian, M. Kalos

PARALLEL ORAL SESSION 8A: Computational Reactor Physics and Particle Transport: Nodal and Characteristic Methods

Advanced Transverse Integration for the Method of Characteristics 1347
Francois Fevotte, Simone Santandrea, Richard Sanchez

A Nodal Expansion Method for Solving the Multigroup SP3-Equations in the Reactor Code DYN3D 1359
C. Beckert, U. Grundmann

Axial Dependence of Homogenized Cross Sections Used for Nodal Analysis of the Boiling Water Reactor 1373
B. Kochunas, M. Hursin, T.J. Downar, C. Glass

Spectral Green's Function Linear-Nodal Method for Monoenergetic X,Y-Geometry External Source Discrete Ordinates Problems 1384
Dany S. Dominguez, Ricardo C. Barros

An Unstructured Characteristics Scheme with a Linear Expansion for Both Fluxes and Cross Sections 1390
Simone Santandrea, Pierre Bellier

A Method of Characteristics Solution to the OECD/NEA 3D Neutron Transport Benchmark Problem 1399
J. Bryce Taylor, Dave Knott, Anthony J. Baratta

PARALLEL ORAL SESSION 8B: Nuclear Reactor Analysis

Benchmarking WIMS/RFSP Against Measurement Data of Wolsong Nuclear Power Plants 1422
Chang Je Park, Hangbok Choi

Optimization Procedure for Radial BWR Fuel Lattice Design Using Genetic Algorithms 1433
C. Martin-del-Campo, R. Carmona, I.P. Oropeza, J.L. François, M.A. Palomera

Comparison of Two-Step Diffusion Solutions and Monte Carlo Solutions to a Doubly Heterogeneous PBMR-400 Problem 1445
Hyun Chul Lee, Kang-Seog Kim, Jae Man Noh

Neutronic Analysis on a Low Enriched Uranium Coupled Reactor Consisting of Pulse Cores and a Laser Module 1454
Hiroki Takezawa, Toru Obara

Degradation Monitoring in IRIS Steam Generators 1461
Bulent Alpay, James Paul Holloway, John C. Lee

Implementation of Component Concept in Silene 2D/3D Pre & Post Processing GUI 1469
Zarko Stankovski

PARALLEL ORAL SESSION 8C: Nuclear Methods for Nonproliferation

Pulse-Shape Discrimination for Identification of Neutron Sources Using the BC-501A Liquid Scintillator 1477
M. Scott Flaska, S.A. Pozzi

A Sequential Least Squares Algorithm for Neutron Spectrum Unfolding from Pulse-Height Distributions Measured with Liquid Scintillators 1488
Yunlin Xu, Marek Flaska, Sara Pozzi, Vladimir Protopopescu, Thomas Downar

Simulation of Cargo Container Interrogation by D-D Neutrons 1500
Tak Pui Lou, Arlyn Antolak

Benchmarking of Monte Carlo Simulations of Thermal Neutron Kinetics and Differential Die-Away Analysis 1511
K.A. Jordan, T. Gozani, J. Vujic

Photonuclear Physics Models, Simulations and Experiments for Nuclear Nonproliferation 1517
Shaun Clarke, Thomas Downar, Sara Pozzi, Marek Flaska, John Mihalczo, Enrico Padovani, Alan Hunt

Monte Carlo Models of Neutron Detection with Organic Scintillators 1527
Sara A. Pozzi, Marek Flaska, Imre Pazsit, Andreas Enqvist

POSTER SESSION II: Computational Medical Applications

Evaluation of a Heterogeneous Coarse Mesh Photon Transport Method Using a Simplified Lung Model 1536
Megan Satterfield, Farzad Rahnema, Dingkang Zhang, Tim Fox

Fast Dose Planning Monte Carlo Simulations in Inhomogeneous Phantoms Submerged in Uniform, Static Magnetic Fields 1544
Ricardo Yanez, James F. Dempsey

Simulation of Electron and Photon Transport Through Tumorous and Surrounding Tissues with 3D Monte Carlo Codes 1550
Y.Z. Kandiev, A.A. Malakhov, S.I. Samarin, E.V. Serova, S.G. Spirina

POSTER SESSION II: Computational Reactor Physics and Particle Transport

A Data Analysis Code for MCNP Mesh and Standard Tallies 1570
Kenneth A. Van Riper

Multi-Group Nondiffusion Neutron-Physical Characteristics of the Nuclear Reactor Cell with Axial Symmetry 1580
Tamara Poveschenko

A Novel Source Convergence Acceleration Scheme for Monte Carlo Criticality Calculations, Part II: Implementation and Results 1591
Bryan E. Toth, David P. Griesheimer

Convergence Testing for MCNP5 Monte Carlo Eigenvalue Calculations 1610
Forrest Brown, Brian Nease, Jesse Cheatham

A Monte Carlo Method for Calculating Initiation Probability 1617
Gregory Greenman, Richard Procassini, Christopher Clouse

New Capabilities in Mercury: A Modern Monte Carlo Particle Transport Code 1628
Richard Procassini, Dermott Cullen, Gregory Greenman, Christian Hagmann, Kevin Kramer, Scott McKinley, Matthew O'Brien, Janine Taylor

A k-eff Search Capability in MC21 1636
R.E. Morrow, T.H. Trumbull, T.J. Donovan, T.M. Sutton

VOLUME 4

Interpolation Methods and Splice Options for Three-Dimensional Transport Calculations Using PARTISN 1648
Matthew A. Jessee, Carl E. Yehnert

Fourier Analysis of Parallel Block-Jacobi Splitting with Transport Synthetic Acceleration in Two-Dimensional Geometry 1660
Massimiliano Rosa, James S. Warsa, Jae H. Chang

Treatment of the Central Singularity in the Conformal Mapping Approach to the Analytic Nodal Method in Cylindrical Geometry 1668
Rian H. Prinsloo, Djordje I. Tomasevic

Multi-Dimensional Automatic Mesh Refinement for the Multigroup SPN Equations 1682
Yaqi Wang, Jean Ragusa

Development and Performance of the Analytic Nodal Diffusion Solver "ANDES" in Multigroups for 3D Rectangular Geometry 1690
Juan-Andres Lozano, José M. Aragonés, Nuria García-Herranz

The LTSN Exponential Nodal Method for One-Speed XY-Geometry Discrete Ordinates Problems in Heterogeneous Media 1702
Eliete Biasotto Hauser, Marco Tullio Vilhena, Ricardo C. Barros

Comparison of Different Shielding Materials Used at Proton Accelerators and Cost-Benefit Analysis 1708
Vahagn Nazaryan, Cynthia E. Keppel

Monte Carlo Particle Transport Capability for Inertial Confinement Fusion Applications 1719
Patrick S. Brantley, Linda M. Stuart

Reactor Physics Characterization of Transmutation Targeting Options in a Sodium Fast Reactor 1724
Samuel E. Bays

POSTER SESSION II: Numerical Methods and Software Architecture for Multiphysics Simulations

The Multi-Physics User-Friendly Gas-Dynamics Code Visual Tsunami 2.0 1736
C.S. Debonnel, L. Trubov, C.A. Zeballos, P.F. Peterson

Software Design of SHARP 1741
A. Siegel, T. Tautges, A. Caceres, D. Kaushik, P. Fischer, G. Palmiotti, M. Smith, J. Ragusa

PIC-MCC Simulation of the Electrical Breakdown in a Plasma Focus Device 1754
M. Frignani, G. Grasso, F. Rocchi, M. Sumini

POSTER SESSION II: Nuclear Methods for Nonproliferation

Analytical and Numerical Modelling of the Detection Statistics of Emission from a Fissile Sample with Absorption 1770
Andreas Enqvist, Imre Pazsit, Sara Pozzi

POSTER SESSION II: Nuclear Reactor Analysis

A New Strategy for Optimal Fuel Core Loading Pattern Design in PWR Nuclear Power Reactors 1780
Niloofar Mohseni, Mehrdad Boroushaki, Mohammad B. Ghofrani, Mohammad H. Raji

A Populational Particle Collision Algorithm Applied to a Nuclear Reactor Core Design Optimization 1792
Wagner F. Sacco, Hermes Alves Filho, Cassiano R.E. de Oliveira

An Algorithm for Efficient Computation of Multi-Layer Neutron Reflection and Transmission Conditions 1802
Marcos P. de Abreu

Cross-Section Parameterization Using Quasi-Regression Approach 1813
Pavel M. Bokov, Rian Prinsloo

Program CSA-3 of Reloading Pattern Optimization in Three-Dimensional Module ..... N/A
Bingheng Wang, Zhihong Liu, Gong Shi, Yongming Hu

Reactivity Oscillations in Molten Salt Reactors 1827
S. Dulla, C. Nicolino, P. Ravetto

PLEANARY SESSION 3: National Ignition Facility and Forefront of High-Performance Computing in Nuclear Systems

The National Ignition Facility: Fusion Ignition in the Laboratory and New Frontiers in High Energy Density Science ..... N/A
Ed Moses

Improving Nuclear Power Economics Via Utilization of High Performance Computing ..... N/A
Paul Turinsky

High Performance Computing in Nuclear Systems: Lessons Learned from Some Recent LWR Applications ..... N/A
Thomas Downar

PARALLEL ORAL SESSION 9A: Computational Reactor Physics and Particle Transport: Sensitivity, Perturbations, and Optimization

New Maximum keff Search Options for "SMORES" 1837
Y. Karni, E. Greenspan

Stochastic Finite-Element Approximation of the Parametric Dependence of Eigenvalue Problem Solution 1851
Mihai Anitescu, Giuseppe Palmiotti, Won-Sik Yang, Monika Neda

Nonlinear Reactor Control Using the Power Derivative in Feedback and Multiple Time-Scale Analysis 1860
James Paul Holloway

Development of Higher-Order Perturbation Approaches Based on Adaptive Euler-Lagrange Fields 1869
Rene van Geemert

Using the Levenberg-Marquardt Method for the Solution of Inverse Transport Problems with Scattering 1898
Keith C. Bledsoe, Jeffrey A. Favorite

PARALLEL ORAL SESSION 9B: Computational Reactor Physics and Particle Transport: Stochastic Considerations in Particle Transport I

A Derivation of Akcasu's "MLP" Equations for 1-D Particle Transport in Stochastic Media 1913
Edward W. Larsen, Anil K. Prinja

A Critique of the Modified Levermore-Pomraning Model 1923
Richard Sanchez

Mean Propagation Kernels for Transport in Correlated Stochastic Media at Unresolved Scales, Illustration with a Problem in Atmospheric Radiation 1941
Anthony Davis

A Generalized Boltzmann Equation for "Non-Classical" Particle Transport 1953
Edward W. Larsen

Stochastic Averaging of Cross Section Uncertainty in Transport 1966
Anil K. Prinja, Erin D. Fichtl

PARALLEL ORAL SESSION 9C: Computational Methods in the Nuclear Fuel Cycle

A Challenge for Computing in the 21st Century: Radwaste Knowledge Management 1982
Hiroyuki Umeki

Radionuclide Transport Calculations from High-Level Long-Lived Radioactive Waste Disposal in Deep Clayed Geologic Formation Toward Adjacent Aquifers 1993
Alain Genty, Christophe Le Potier

High Performance FVFE Multidomain Numerical Method to Perform Radionuclides Transport Calculations 2005
M. Dymitrowska, M. Bourgeois, G. Mathieu

Uncertainty Analysis of Multiple Canister Repository Model by Large-Scale Calculation 2020
Keiichi Tsujimoto, Hiroshi Okuda, Joonhong Ahn

Sensitivity of Repository Thermal-Hydrological-Chemical Simulations to Choice of Numerical Algorithm ..... N/A
S.L. Painter, J. Myers, L. Sabido, A. Sun

PARALLEL ORAL SESSION 10A: Computational Reactor Physics and Particle Transport: Analytical Benchmarks

The Analytical Benchmark Library for Nuclear Engineering Applications (Case Studies in Neutron Transport Theory) ..... N/A
Barry Ganapol

Parallel PENTRAN Solutions of the "TIEL" Steady State Neutron Transport Benchmark Problems 2036
M. Ghita, G.E. Sjoden, G. Ghita

Matrix Albedo for Discrete Ordinates Infinite-Medium Boundary Condition 2047
Kirk Matthews, James Dishaw

Verification of the Coupled Space-Angle Adaptivity Algorithm for the Finite Element-Spherical Harmonics Method Via the Method of Manufactured Solutions 2059
Hyeong Kae Park, Cassiano R. E. de Oliveira

An Embedded Semi-Analytical Benchmark Via Iterative Interpolation for Neutron Transport Methods Verification 2070
B.D. Ganapol, K.T. Clarno, Seth Johnson, Cassiano de Oliveira, Steven Hamilton

PARALLEL ORAL SESSION 10B: Computational Reactor Physics and Particle Transport: Stochastic Considerations in Particle Transport II

Joint Moments of Neutron Number and Medium State in a Time-Varying Multiplying Medium 2081
Yasunori Kitamura, Imre Pazsit, Akio Yamamoto, Yoshihiro Yamane

Calculation of the Pulse Height Distribution Induced by Fast Neutrons in a Scintillation Detector 2093
Andreas Enqvist, Imre Pazsit, Sara Pozzi

Monte Carlo Simulation of VHTR Particle Fuel with Chord Length Sampling 2102
Wei Ji, William R. Martin

Randomly Dispersed Particle Fuel Model in the PSG Monte Carlo Neutron Transport Code 2110
Jaakko Leppanen

Stochastic Geometry in PRIZMA Code 2122
G.N. Malyshkin, E.A. Kashaeva, R.F. Mukhamadiev

PARALLEL ORAL SESSION 10C: Numerical Methods and Software Architecture for Multiphysics Simulations

An Overview of Mesh Generation Technology Applied to Reactor Core Analysis 2136
Glen Hansen

Application of High-Order Implicit Schemes for Nonlinear Multi-Physics Simulations 2154
Vijay Mahadevan, Jean Ragusa

Implicit Monte Carlo Methods for Coupled Three-Temperatures Transport 2164
T.M. Evans, J.D. Densmore

LWR Multi-Physics Developments and Applications Within the Framework of the NURESIM European Project 2178
O. Zerkak, P. Coddington, N. Crouzet, E. Royer, J. Jiminez, D. Cuervo

The PCICE Algorithm Coupled with Implicit Conjugate Heat Transfer for Reactor Simulations ..... N/A
Richard Martineau

Shock Wave Solutions for Radiation Hydrodynamics 2200
Robert B. Lowrie, Jarrod D. Edwards
