

IUTAM Symposium on Human Body Dynamics 2011

Procedia IUTAM Volume 2

**Waterloo, Ontario, Canada
5-8 June 2011**

Editors:

**John McPhee
Jozsef Kovecses**

**ISBN: 978-1-62748-498-5
ISSN: 2210-9838**

Contents

Foreword	
John J. McPhee and József Kövecses	1
Multibody biomechanical models of the upper limb	
Jorge Ambrósio, Carlos Quental, Bartłomiej Pilarczyk, João Folgado and Jacinto Monteiro	4
Challenges in modeling total knee arthroplasty and total hip replacement	
Farid Amirouche and Giovanni F. Solitro.	18
A force-based approach for joint efforts estimation during the double support phase of gait	
Javier Cuadrado, Rosa Pamies-Vila, Urbano Ligrís and F. Javier Alonso.	26
Simulation of fatigue-initiated subacromial impingement: clarifying mechanisms	
Clark R. Dickerson, Jaclyn N. Chopp and Stephanie P. Borgs.	35
Compliant contact force approach for forward dynamic modeling and analysis of biomechanical systems	
Paulo Flores	58
Simulation and design of an active orthosis for an incomplete spinal cord injured subject	
Josep M. Font-Llagunes, Rosa Pamies-Vilà, Javier Alonso and Urbano Ligrís	68
The intertwining pathways in biology and biomechanics in femoro-acetabular impingement (FAI) patients	
Marcus Jäger, Bernd Bittersohl, Dietmar Rosenthal, Harald Hefter, Bettina Westhoff, Rüdiger Krauspe and Christoph Zilkens	82
Integrating efficient kinematics in biomechanics of human motions	
Andres Kecskemethy	86
The use of the flexible multibody approach for lower body skeletal loading analysis	
Adam Kładowski, Timo Rantalainen, Ari Heinonen, Harri Sievänen and Aki Mikkola	93
Foot impact in different modes of running: mechanisms and energy transfer	
József Kövecses and László L. Kovács	101
Subject-oriented overground walking pattern generation on a rehabilitation robot based on foot and pelvic trajectories	
K. H. Low	109
What I have learned from the great athletes	
Stuart McGill	128
An EMG-driven model to evaluate quadriceps strengthening after an isokinetic training	
Luciano L. Menegaldo and Liliam F. Oliveira	131
Forward dynamic human gait simulation using a SLIP target model	
Matthew Millard, Eric Kubica and John McPhee.	142
Dynamics of biomechanisms: musculotendon mass, constraints, and architecture	
Dinesh K. Pai, Shinjiro Sueda and David I. W. Levin	158
Joint morphology and its relation to function in elite sprinters	
Stephen J. Piazza, Josh R. Baxter and Huseyin Celik	168
Challenges in human body mechanics simulation	
John Rasmussen	176
Simulation of human movement: applications using OpenSim	
Jeffrey A. Reinbolt, Ajay Seth and Scott L. Delp	186
Walking dynamics from mechanism models to parameter optimization	
Werner Schiehlen and Daniel García-Vallejo	199
OpenSim: a musculoskeletal modeling and simulation framework for in silico investigations and exchange	
Ajay Seth, Michael Sherman, Jeffrey A. Reinbolt and Scott L. Delp.	212
Integration of finite element and multibody system algorithms for the analysis of human body motion	
Ahmed A. Shabana, Florentina M. Gantoi and Michael A. Brown	233
Simbody: multibody dynamics for biomedical research	
Michael A. Sherman, Ajay Seth and Scott L. Delp.	241

An efficient muscle fatigue model for forward and inverse dynamic analysis of human movements Miguel T. Silva, André F. Pereira and Jorge M. Martins	262
Modeling and synthesis of human motion within the collaborative research center 588 Christian Simonidis, Günther Stelzner, Wolfgang Seemann and Fabian Bauer	275
Measurement and simulation of joint motion induced via biarticular muscles during human walking Darryl G. Thelen, Amy Lenz and Antonio Hernandez	290
Implicit methods for efficient musculoskeletal simulation and optimal control Antonie J. van den Bogert, Dimitra Blana and Dieter Heinrich	297
Modelling muscle forces: from scaled fibres to physiological task-groups. James M. Wakeling and Sabrina S.M. Lee	317
