## VOLUME 1

### GENERAL SUBMISSIONS

|                                                                                                                                                |     |
|------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Learning the Sequence Determinants of Exon Definition from Millions of Random Synthetic Sequences .....</b>                                 | 1   |
| <i>Alexander B. Rosenberg, Rupali P. Patwardhan, Jay Shendure, Georg Seelig</i>                                                                |     |
| <b>Scalable System-Wide Design of TF- and dCas9-Based Genetic Circuits .....</b>                                                               | 20  |
| <i>Howard M. Salis</i>                                                                                                                         |     |
| <b>Quantifying Host-Circuit Interactions with a Mechanistic Chassis Model .....</b>                                                            | 40  |
| <i>Andrea Weibe</i>                                                                                                                            |     |
| <b>Biological Insights from a Genetically-Structured Deterministic Chemical Kinetic Simulation of the Life Cycle of Bacteriophage M13.....</b> | 50  |
| <i>Nick Fisk</i>                                                                                                                               |     |
| <b>Spatial and Quantitative Optimization of Engineered Multi-Element Therapeutic Proteins .....</b>                                            | 62  |
| <i>Jeffrey C. Way, Devin R. Burrill, Avi Robinson-Mosher, James J. Collins, Pamela A. Silver</i>                                               |     |
| <b>Toward Rational Engineering of Phage to Combat Multidrug-Resistant Pathogens.....</b>                                                       | 64  |
| <i>Kyle Cady</i>                                                                                                                               |     |
| <b>Engineering Smarter and Stronger T Cells for Cancer Immunotherapy .....</b>                                                                 | 76  |
| <i>Yvonne Chen</i>                                                                                                                             |     |
| <b>μsynth: A Versatile Microfluidic Device for Automating the Synthetic Biology .....</b>                                                      | 77  |
| <i>Steve C. C. Shih</i>                                                                                                                        |     |
| <b>Use of an Enzyme-coupled Biosensor to Engineer a BIA Fermentation Pathway in Yeast .....</b>                                                | 106 |
| <i>John Dueber</i>                                                                                                                             |     |
| <b>CRISPR Genetic Circuits for Genome Control and Interfacing .....</b>                                                                        | 120 |
| <i>Stanley L. Qi</i>                                                                                                                           |     |
| <b>Toward Computation with Multicellular Systems.....</b>                                                                                      | 135 |
| <i>Eric Klavins</i>                                                                                                                            |     |
| <b>Synthetic Approaches to Studying Cis-Regulation .....</b>                                                                                   | 150 |
| <i>Sriram Kosuri</i>                                                                                                                           |     |
| <b>Designing Biology for a Healthy World .....</b>                                                                                             | 165 |
| <i>Pamela A. Silver</i>                                                                                                                        |     |
| <b>The Development of Platform-based Technologies for the Optimization of Sustainably Produced Chemicals.....</b>                              | 202 |
| <i>Stephanie Culler</i>                                                                                                                        |     |
| <b>Metabolite Valves: Dynamic Control of Metabolic Flux for Pathway Engineering .....</b>                                                      | 203 |
| <i>Kristala L.J. Prather</i>                                                                                                                   |     |
| <b>Gene Circuits for Self-Tuning Metabolic Pathways .....</b>                                                                                  | 204 |
| <i>Diego Oyarzún</i>                                                                                                                           |     |
| <b>Protecting Groups for Improved Control of Indigo Biosynthesis.....</b>                                                                      | 213 |
| <i>Tammy M. Hsu</i>                                                                                                                            |     |
| <b>What do Soybeans Have to do with Sustainable use of our Oceans? .....</b>                                                                   | 228 |
| <i>Virginia Ursin, Jeff Hass, Byron Froman, Henry Valentín</i>                                                                                 |     |
| <b>Engineering Robust Hosts to Improve Microbial Biofuel Production .....</b>                                                                  | 229 |
| <i>Mary Dunlop</i>                                                                                                                             |     |
| <b>Targeted Integration of Genes into the Maize Genome Facilitated By Cas9-gRNA System .....</b>                                               | 238 |
| <i>Huirong Gao</i>                                                                                                                             |     |
| <b>Living Foundries: Differentiated U.S. Technology Base .....</b>                                                                             | 249 |
| <i>Alicia Jackson</i>                                                                                                                          |     |
| <b>Broadband DNA Synthesis .....</b>                                                                                                           | 255 |

## VOLUME 2

|                                                                                                               |     |
|---------------------------------------------------------------------------------------------------------------|-----|
| <b>Enabling Selection in Directed Evolution of Enzymes Via Cellular Engineering .....</b>                     | 540 |
| <i>Neda Hassanpour, Ehsan Ullah, Mona Yousofshahi, Nikhil U. Nair, Soha Hassoun</i>                           |     |
| <b>Quantifying and Modeling Compositional Context Effects on Synthetic Biocircuits in <i>E. coli</i>.....</b> | 552 |
| <i>Enoch Yeung</i>                                                                                            |     |
| <b>Prosthetic Gene Networks for Biomedical Applications .....</b>                                             | 567 |
| <i>Martin Fussenegger</i>                                                                                     |     |
| <b>Controlling Organisms Electrically with Synthetic Biology .....</b>                                        | 568 |
| <i>Caroline Ajo-Franklin</i>                                                                                  |     |
| <b>Towards the High-Throughput Construction of Fluorescent Biosensors .....</b>                               | 585 |
| <i>Stacy-Anne Morgan</i>                                                                                      |     |
| <b>A System for Unprecedented Ribosome Engineering in Living <i>E. coli</i> .....</b>                         | 604 |
| <i>Erik D. Carlson</i>                                                                                        |     |
| <b>Solving the Nitrogen Problem in Food Production.....</b>                                                   | 632 |
| <i>Giles E. D. Oldroyd</i>                                                                                    |     |
| <b>Insights from a Global View of Secondary Metabolism: Small Molecules from the Human Microbiota .....</b>   | 649 |
| <i>Michael Fischbach</i>                                                                                      |     |
| <b>Synthetic Biology Engineering of Biofilms As Nanomaterials Factories.....</b>                              | 675 |
| <i>Peter Nguyen</i>                                                                                           |     |

## POSTER SESSION

|                                                                                                                                                                                                |     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Evaluation of TALE- and Crispr/Cas9-Based Synthetic Transcription Factors for Heterologous Gene Expression in <i>Saccharomyces Cerevisiae</i>.....</b>                                      | 705 |
| <i>Fabian Machens, Lena Hochrein, Bernd Mueller-Roeber, Katrin Messerschmidt</i>                                                                                                               |     |
| <b>Modular Design of Transcriptional Regulatory Parts .....</b>                                                                                                                                | 706 |
| <i>Chunbo Lou, Yeqing Zong, Haoqian Zhang, Xiangyu Ji, Qi Quyang</i>                                                                                                                           |     |
| <b>Development of Modular, Self-Assembling Synthetic Protein Complexes As Screening Platforms for Enhanced Enzyme Discovery .....</b>                                                          | 707 |
| <i>Ian Haydon, Johnnie Hahn, Elizabeth Znameroski, Fang Liu, Tia Heu, Sumati Hasani, Michael Lamsa, Aubrey Jones, William Widner, Paul Harris, Ronald Mullikin, Sarah A. Teter, Janine Lin</i> |     |
| <b>Bridging the Gap: A Roadmap to Breaking the Biological Design Barrier.....</b>                                                                                                              | 708 |
| <i>Jacob Beal</i>                                                                                                                                                                              |     |
| <b>High-Throughput Picodroplet-Based Analysis of Biosynthetic Libraries .....</b>                                                                                                              | 709 |
| <i>Carlos Bricio, Xin Liu, Xin Li, Marian Rehak, Tom Ellis, Clive Smith</i>                                                                                                                    |     |
| <b>Synthetic Biology in a Chip: A Digital Microfluidic Platform for Cell Transformation, Culture and Expression .....</b>                                                                      | 711 |
