SPIE

Volume 9952

Proceedings of SPIE 0277-786X, V. 9952

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIEDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Systems Contamination: Prediction, Control, and Performance 2016*, edited by Joanne Egges, Carlos E. Soares, Eve M. Wooldridge, Proceedings of SPIE Vol. 9952 (SPIE, Bellingham, WA, 2016) Six-digit Article CID Number.

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a six-digit CID article numbering system structured as follows:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

- v *Authors*
- vii *Conference Committee*
- ix *The advanced LIGO detectors in the era of first discoveries (Plenary Paper) [9960-200]*

SESSION 1 CONTAMINATION CONTROL ANALYSIS AND MODELING I

- 9952 03 Outgassing study of spacecraft materials and contaminant transport simulations [9952-3]
- 9952 05 Percent area coverage through image analysis [9952-5]
- 9952 06 Materials outgassing rate decay in vacuum at isothermal conditions [9952-6]

SESSION 2 CONTAMINATION CONTROL ANALYSIS AND MODELING II

- 9952 07 UV photofixation of molecular contamination: simulation of in-flight data [9952-7]
- 9952 08 Optical calculations and in-situ measurement of transmittance spectra of contaminant thin films [9952-8]
- 9952 09 Need for a tool for the preliminary analysis of bipropellant plume impingement effects on contamination sensitive surfaces [9952-9]
- 9952 0A A partial least squares model for non-volatile residue quantification using diffuse reflectance infrared reflectance spectroscopy [9952-10]
- 9952 0B Thermal vacuum chamber repressurization with instrument purging [9952-15]

SESSION 3 SPACE MISSION CONTAMINATION: TECHNOLOGY APPLICATION, TESTING AND FLIGHT MEASUREMENTS

- 9952 0C The use of the Molecular Adsorber Coating technology to mitigate vacuum chamber contamination during Pathfinder testing for the James Webb Space Telescope [9952-11]
- 9952 0D Application of the Molecular Adsorber Coating technology on the Ionospheric Connection Explorer program [9952-12]
- 9952 0E Mass spectrometric characterization of the Rosetta Spacecraft contamination with ROSINA [9952-13]
- 9952 0F LAVA subsystem integration and testing for the RESOLVE payload of the Resource Prospector mission: mass spectrometers and gas chromatography [9952-14]

SESSION 4 CONTAMINATION CONTROL METHODS AND MEASUREMENTS I

9952 0H Establishing and monitoring an aseptic workspace for building the MOMA mass spectrometer [9952-18]

SESSION 5 CONTAMINATION CONTROL METHODS AND MEASUREMENTS II

9952 0J Hyperspectral instrumentation to image and characterize the fluorescence of materials [9952-19]

9952 0K A new experimental procedure of outgassing rate measurement to obtain more precise deposition properties of materials [9952-20]

9952 0L Real time obscuration monitoring [9952-21]

POSTER SESSION

9952 0M Influence of the contaminant size on the thermal damage of optical mirrors used in high energy laser system [9952-22]

9952 0N Laser-induced contamination of space borne laser systems: impact of organic contamination and mitigation by oxygen [9952-23]

9952 0O Decomposition of dioctyl phthalate (DOP) using titanium dioxide photocatalyst in a vacuum [9952-24]
