Volume 10503

Proceedings of SPIE, 1605-7422, V. 10503

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIEDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:
Author(s), "Title of Paper," in *Quantitative Phase Imaging IV*, edited by Gabriel Popescu, YongKeun Park, Proceedings of SPIE Vol. 10503 (SPIE, Bellingham, WA, 2018) Seven-digit Article CID Number.

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B … 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

vii *Authors*
ix *Conference Committee*

QPI METHODOLOGIES I

10503 02 **Is phase measurement necessary for incoherent holographic 3D imaging? (Invited Paper)** [10503-1]

10503 05 **Longitudinal spatial coherence gated high-resolution tomography and quantitative phase microscopy of biological cells and tissues with uniform illumination** [10503-65]

QPI ALGORITHMS AND IMAGE PROCESSING

10503 0H **Noise reduction in digital holography based on a filtering algorithm** [10503-17]

10503 0J **A robust holographic autofocusing criterion based on edge sparsity: comparison of Gini index and Tamura coefficient for holographic autofocusing based on the edge sparsity of the complex optical wavefront** [10503-19]

ENTREPRENEURIAL SESSION II

10503 0V **The evolution of phase holographic imaging from a research idea to publicly traded company** [10503-30]

QPI OF CELLS AND TISSUES

10503 11 **Safety and efficacy of Regadenoson in myocardial perfusion imaging (MPI) stress tests: A review** [10503-35]

10503 12 **Quantification of mammalian tumor cell state plasticity with digital holographic cytometry** [10503-36]

10503 13 **Multi-spectral digital holographic microscopy for enhanced quantitative phase imaging of living cells** [10503-37]

QPI METHODOLOGIES VI

10503 16 **Surface plasmon holographic microscopy for near-field refractive index detection and thin film mapping** [10503-43]

10503 18 **Shaping the light for the investigation of depth-extended scattering media (Invited Paper)** [10503-15]

10503 19 **Speckle-free inherently-phased synthetic aperture microscopy with coherent illumination** [10503-40]

QPI CLINICAL APPLICATIONS II

10503 1J **Digital holographic microscopy for toxicity testing and cell culture quality control (Invited Paper)** [10503-49]

POSTER SESSION

10503 1N **Quantitative phase imaging of platelets in patients with chronic renal failure treated with hemodialysis** [10503-55]

10503 1O **Quantitative phase imaging characterization of tumor-associated blood vessel formation on a chip** [10503-56]

10503 1Q **Phase from defocus** [10503-58]

10503 1R **Dynamic quantitative analysis of adherent cell cultures by means of lens-free video microscopy** [10503-59]

10503 1T **Imaging complex objects using learning tomography** [10503-61]

10503 1U **Transportable and vibration-free full-field low-coherent quantitative phase microscope** [10503-62]

10503 1V **Speckle-free and halo-free low coherent Mach-Zehnder quantitative-phase-imaging module as a replacement of objective lens in conventional inverted microscopes** [10503-63]

10503 27 **The investigation of corrosion behavior of electrodeposited Co-Fe alloys surface with phase and 3D reconstruction of image using TIE and TPE** [10503-78]

10503 2D **Quantitative phase microscopy using deep neural networks** [10503-84]

10503 2E **Phase shifting white light interferometry using colour CCD for optical metrology and bio-imaging applications** [10503-85]

10503 2F **Large field of view quantitative phase imaging of induced pluripotent stem cells and optical pathlength reference materials** [10503-86]

10503 2G **Applications of quantitative time lapse holographic imaging to the development of complex pharmaceutical nano formulations** [10503-87]

10503 2H **Common-path digital holographic microscopy based on a beam displacer unit** [10503-88]

10503 2I **Automated high resolution full-field spatial coherence tomography for quantitative phase imaging of human red blood cells** [10503-91]

10503 2J **Single-pixel diffraction-phase microscopic imaging combined with photon counting** [10503-92]

10503 2K **Simultaneous fluorescence and quantitative phase microscopy with single-pixel detectors** [10503-93]

10503 2R **Quantitative phase imaging for enhanced assessment of optomechanical cancer cell properties** [10503-101]

10503 2S **Subwavelength resolution Fourier ptychography with hemispherical digital condensers** [10503-102]

10503 2V **A non-iterative twin image elimination method with two in-line digital holograms** [10503-105]

10503 2Y **Quantitative phase imaging using a programmable wavefront sensor** [10503-107]
