Sponsored and Published by
SPIE

Volume 10650

Proceedings of SPIE 0277-786X, V. 10650

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIEDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:
Author(s), "Title of Paper," in *Long-Range Imaging III*, edited by Eric J. Kelmelis, Proceedings of SPIE Vol. 10650 (SPIE, Bellingham, WA, 2018) Seven-digit Article CID Number.

Copying of material in this book for internal or personal use, or for the internal or personal use of specific clients, beyond the fair use provisions granted by the U.S. Copyright Law is authorized by SPIE subject to payment of copying fees. The Transactional Reporting Service base fee for this volume is $18.00 per article (or portion thereof), which should be paid directly to the Copyright Clearance Center (CCC), 222 Rosewood Drive, Danvers, MA 01923. Payment may also be made electronically through CCC Online at copyright.com. Other copying for republication, resale, advertising or promotion, or any form of systematic or multiple reproduction of any material in this book is prohibited except with permission in writing from the publisher. The CCC fee code is 0277-786X/18/$18.00.

Printed in the United States of America by Curran Associates, Inc., under license from SPIE.

Publication of record for individual papers is online in the SPIE Digital Library.

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

SYSTEMS AND APPLICATIONS

10650 03 Electro-optical tracking considerations III [10650-2]

10650 04 Efficiency measurements for a digital-holography system [10650-3]

10650 05 Exploring mitigation of image blur due to atmospheric turbulence by utilizing multiple sensors to achieve optical path diversity [10650-4]

ATMOSPHERIC EFFECTS

10650 08 Signal-to-noise models for digital-holographic detection [10650-7]

10650 09 Accounting for optical refractivity and turbulence effects in optical wave propagation over long distances [10650-8]

10650 0A Characterizing atmospheric turbulence over long paths using time-lapse imagery [10650-9]

TURBULENCE MITIGATION

10650 0B Optically coherent image reconstruction in the presence of phase errors using advanced-prior models [10650-10]

10650 0C ATACAMA: high performance atmospheric distortion correction using a Xilinx UltraScale+ [10650-11]

10650 0D Variable aperture lucky look approach to imaging through deep turbulence [10650-12]

10650 0E Mitigation of image intensity distortion using chaos-modulated image propagation through gamma-gamma atmospheric turbulence [10650-13]

MODELING, METRICS, AND TOOLS: JOINT SESSION WITH CONFERENCES 10625 AND 10650

10650 0H Super-resolution in the presence of atmospheric optical turbulence [10650-16]

10650 0J Estimating uncertainty in limiting resolution of full motion video [10650-18]

10650 0K Validating pyBSM: a Python package for modeling imaging systems [10650-19]

10650 0L Statistical evaluation of motion-based MTF for full-motion video using the Python-based PyBSM image quality analysis toolbox [10650-20]
