Volume 10894

Proceedings of SPIE, 1605-7422, V. 10894

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Plasmonics in Biology and Medicine XVI*, edited by Tuan Vo-Dinh, Ho-Pui A. Ho, Krishanu Ray, Proceedings of SPIE Vol. 10894 (SPIE, Bellingham, WA, 2019) Seven-digit Article CID Number.

Publication of record for individual papers is online in the SPIE Digital Library.

SPIE. DIGITAL LIBRARY

SPIDigitalLibrary.org

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

| | |
|-----|-----------------------------|
| vii | <i>Authors</i> |
| ix | <i>Conference Committee</i> |

BIOPLASMONICS SYSTEMS

| | |
|----------|--|
| 10894 04 | Nano-bio interactions as characterized by SERS: The interaction of liposomes with gold nanostructures is highly dependent on lipid composition and charge (Invited Paper) [10894-3] |
|----------|--|

SURFACE-ENHANCED RAMAN SCATTERING (SERS)

| | |
|----------|--|
| 10894 0B | Trapping and SERS identification of extracellular vesicles using nanohole arrays (Invited Paper) [10894-10] |
| 10894 0C | Application of plasmonic nanoprobe for SERS sensing and imaging of biotargets in plant systems [10894-11] |

SERS-BASED SENSING AND SYSTEMS

| | |
|----------|--|
| 10894 0D | Analysis of microorganisms, chlorinated hydrocarbons and hyaluronic acid gel using Raman based optofluidic techniques and SERS (Invited Paper) [10894-12] |
| 10894 0E | Screening of usage of OCT drugs by means of SERS spectroscopy [10894-13] |
| 10894 0F | Toward development of fiber optic surface enhanced Raman spectroscopy probes using 2-photon polymerization for rapid detection of bacteria [10894-14] |

NANOPLASMONICS AND SURFACE PLASMON RESONANCE (SPR)

| | |
|----------|--|
| 10894 0J | Resolution optimized prism-based SPR imaging for the study of individual bacteria interaction with surface [10894-18] |
| 10894 0L | Protein sensing using ultra-high refractive index hyperbolic metamaterials [10894-20] |

SURFACE PLASMON RESONANCE BIOSENSING

- 10894 OM **Nanostructured plasmonic gold films for enhanced sensitivity of SPR biological sensing and imaging** [10894-21]
- 10894 ON **Real-time biosensing of proteins on a DVD nanoplasmonic grating** [10894-22]
- 10894 OP **Detection of biological analytes using surface plasmon resonance as a biosensing technique for possible development of a point of care diagnostic tool** [10894-24]
- 10894 OR **Surface-enhanced Raman spectroscopy and localized surface plasmon resonance detection of hydrogen peroxide using plasmonic gels** [10894-26]

PLASMONIC PLATFORMS AND OPTICAL SYSTEMS

- 10894 OW **Rapid and adjustable shifted excitation Raman difference spectroscopy at 785 nm** [10894-31]
- 10894 OZ **Imaging and tracking single plasmonic nanoparticles in 3D background-free with four-wave mixing interferometry** [10894-34]
- 10894 10 **Fabrication of plasmonic nano-aperture array with nanoscale double slits for single molecule analysis** [10894-35]

ADVANCED OPTICAL SENSING SYSTEMS

- 10894 11 **Tailored diode lasers: enabling Raman spectroscopy in the presence of disturbing fluorescence and background light** [10894-36]
- 10894 14 **Proposal for a gel-based SERS sensor** [10894-39]
- 10894 16 **DNA based molecular logic devices: a review of some ongoing work with multifluorophore FRET systems** [10894-41]
- 10894 17 **Plasmonic nanopore prepared on MoS₂ membrane-hybrid nanostructures based on site selective deposition** [10894-42]

POSTER SESSION

- 10894 18 **Nanoholes arrays as effective SERS substrates with multiple wavelength SERS response and large electromagnetic SERS enhancement factors** [10894-43]
- 10894 19 **Hot electron based surface plasmon resonance sensor with Au-TiO₂-Ti planar micro-comb structure Schottky diodes** [10894-44]
- 10894 1B **Evaluating hydrogels for implantable probes using SERS** [10894-46]

- 10894 1D **Bioconjugation of gold nanoparticles for surface plasmon resonance sensor** [10894-48]
- 10894 1E **Growth and characterisation of gold thin film layer using an ebeam evaporation system for surface plasmon resonance applications** [10894-49]
- 10894 1H **Spatially switched near field distribution using plasmonic random nanoislands** [10894-52]
- 10894 1J **Implantable "smart tattoo" SERS nanosensors for in vivo detection of nucleic acid biotargets in a large animal model** [10894-54]
- 10894 1L **FRET characterization of hollow plasmonic nanoantennas** [10894-56]
