

# Ultrafast Optics XII

Igor Jovanovic  
Bojan Resan  
Károly Osvay  
Giacomo Coslovich  
Editors

6–11 October 2019  
Bol, Croatia

*Published by*  
SPIE

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at [SPIDigitalLibrary.org](http://SPIDigitalLibrary.org).

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Ultrafast Optics 2019*, edited by Igor Jovanovic, Bojan Resan, Károly Osvay, Giacomo Coslovich, Proceedings of SPIE Vol. 11370 (SPIE, Bellingham, WA, 2019) Seven-digit Article CID Number.

---

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

# Table of Contents

## Oral Presentations

Ultrahigh Peak-Power Laser Systems and Related Technologies ..... 1137001-**17**

G. Mourou, *Passion for Extreme Light*

L. Ranc et al., *Optimisation of a Petawatt class compressor alignment based on spectrally resolved wave front analysis*

N. Smijesh et al., *Contrast improvement of few-cycle laser pulses using nonlinear ellipse rotation*

F. Lureau, *10 petawatt lasers for extreme light applications*

Z. Li et al., *A possible chance and a potential challenge for 3-fs 100-petawatt lasers*

J. H. Sung et al., *Ultraintense Ti:sapphire laser with an intensity of  $5.5 \times 10^{22}$  W/cm<sup>2</sup>*

P.A.Carpeggiani al., *Generation of 0.3-TW few-cycle driver pulses via efficient cascaded Raman frequency down conversion*

Generation of Ultrashort Optical Pulses ..... 1137001-**35**

A. S. Kowligy et al., *Mid-infrared frequency combs in the time-domain: single-cycle waveforms and quantum noise limited measurement*

E. Escoto, G. Steinmeyer, *Demystifying Self-Modelocking*

B. E. Schmidt et al., *TW-Peak-Power Post-Compression of 70-mJ pulses from an Yb Amplifier*

G. Fan et al., *1-D energy scaling of multi-plate pulse compression to 6 mJ in a compact setup*

F. Belli et al., *Strong and weak seeded four-wave mixing in stretched gas-filled hollow capillary fibers*

M. Hanna et al., *Nonlinear pulse compression using multi-pass cells*

G. Barbiero et al., *Sub-10 fs, 45 W, 3  $\mu$ J pulses from a Yb:YAG thin-disk oscillator*

T. F. Grigorova et al., *Dispersion tuning of nonlinear dynamics in gas-filled capillary fibres*

X. Ding et al., *Adiabatic four-wave mixing for ultrafast sources in optical fibers*

J. Liu, *Generation and single-shot characterization of femtosecond pulses with high temporal contrast*

I. Jovanovic et al., *Zettawatt-Equivalent Ultrashort Pulse Laser System (ZEUS) at the University of Michigan*

Science and Technology of Ultrashort Pulse Amplification..... 1137001-**65**

- C. R. Phillips et al., *Optical parametric chirped pulse amplification with PPLN: high average power sub-two-cycle 2.5  $\mu\text{m}$  pulses*  
N. Flemens et al., *Near-fully efficient, back-conversion suppressed optical parametric amplification via a secondary nonlinear wave-mixing channel*  
M. K. R. Windeler et al., *High power, 100 kHz repetition rate OPCPA operating at 800 nm and 1.5 - 2.0  $\mu\text{m}$*   
Sz. Toth et al., *Conceptual study of a 1 kHz 10 mJ-class mid-IR OPCPA system with thermal aspects*  
Sz. Toth et al., *Design study of two-cycle bandwidth, single-color pumped OPCPA chain*

High Harmonic and Attosecond Pulse Technology and Science ..... 1137001-**84**

- F. Krausz, *Attosecond Science: From Tracing Electrons to Cancer Detection* p75  
D. A. Zimin et al., *Gating of optical waveforms by attosecond charge control in solids*  
J. P. Duris, *100 gigawatt-class attosecond X-ray laser pulse production and measurement*  
V. A. Antonov et al., *Formation of attosecond pulses in the water window range via optically dressed H-/He-like plasma-based X-ray lasers*  
G. Porat et al., *Phase-matched extreme-ultraviolet frequency-comb generation*  
C. Valentin et al., *Optics-free focusing and spectral filtering of XUV harmonic beams*  
L. Lavenu et al., *Efficient ultrafast, high energy sub-2 cycle driver at 150 kHz*  
A. Cartella et al., *A beamline combining attosecond-XUV and sub-2-fs deep-UV pulses*  
G. Ma et al., *Waveform-dependent relativistic high-order harmonics and field-driven plasma surface dynamics*

Free Electron Laser Technology and Applications..... 1137001-**111**

- H.-S. Kang, *Realization of Ultra-stable Hard X-ray Free Electron Laser*  
M.-E. Couprie, *Towards Free Electron Laser based on Laser Plasma Accelerators*  
S. Droste et al., *High-sensitivity Femtosecond X-ray Optical Cross-Correlator for Next Generation Free-Electron Lasers*  
T. Togashi et al., *Timing stabilization of synchronized femtosecond laser system for pump-probe experiments in SACLA*  
A. Weeks, *Turning on the Lights: Transitioning from Construction to Operations at the Extreme Light Infrastructure (ELI)*

Coherent Beam Combining and Pulse Synthesis ..... 1137001-**123**

W. Liu, *4D-programmable Ultrafast Laser Architectures and their Applications in Accelerator and FEL Physics*

H. Stark et al., *High-power temporal and spatial coherent pulse combination of ultrafast fiber lasers*

R. E. Mainz et al., *Fully Stabilized and Controlled Sub-Cycle Optical Pulses from Parallel Parametric Waveform Synthesis*

Y. Yang et al., *A parametric waveform synthesizer for attosecond science*

T. Buberl, *Broadband interferometric subtraction of ultrashort pulses*

Few-Cycle Pulses, Comb Generation, and Carrier-Envelope Phase Control ..... 1137001-**142**

A. S. Mayer et al., *Leveraging novel nonlinear devices for gigahertz frequency combs*

N. Thire et al., *High-average-power mid-infrared source for spectroscopy and strong-field physics at 100 kHz*

M. Ouille et al., *Relativistic-intensity waveform-controlled near-single-cycle pulses from a stretched hollow fiber compressor*

A. Chambinaud et al., *Sub-50 fs fs efficient nonlinear compression of a 100 W amplifier*

Y.-C. Lin et al., *Sub-optical-cycle shortwave infrared pulses generation in a cascaded degenerate optical parametric amplifier*

S. Alisauskas et al., *Highly Flexible Pump-Probe Laser for the Soft-X-Ray Free Electron Laser FLASH*

High Average Power Ultrafast Lasers from IR to FEL ..... 1137001-**161**

A. Pugžlys et al., *Amplified programmable frequency-tunable fs pulse bursts: from THz synthesis to strong-field molecular applications*

C. Y. Teisset et al., *High-Power Ultrafast Industrial Thin-Disk Lasers*

M. Gebhardt et al., *Performance scaling of ultrafast two micron fiber CPA systems and highpower nonlinear pulse compression to the sub-2 cycle regime*

T. Stanislauskas et al., *Performance test results of ELI-ALPS SYLOS lasers*

J. Buldt et al., *Broadband THz radiation with 50 mW average power p173*

C. Gollner et al., *Broadband intense THz pulses generated with a mid-infrared OPCPA pump source*

S. Breitkopf et al., *Yb-doped fiber laser system with 1kW, 10mJ and <300fs pulse for the generation of TW class few-cycle pulses*

U. Elu et al., *Table-top high energy 7 $\mu$ m OPCPA for strong field physics*

E. Shestaeu et al., *100  $\mu$ J, 100 kHz, CEP-stable high-power few-cycle fiber laser*

N. Modsching et al., *Frontiers in high power ultrafast thin-disk lasers operating in the sub-100-fs regime*

K. L. Vodopyanov et al., *Frequency divide-and-conquer approach to producing few-cycle mid-IR transients and multi-octave combs*

Novel Methods for Shaping and Measuring Ultrashort Pulses ..... 1137001-204

P. Lassonde, *Frequency domain nonlinear optics: concept and applications*

Z. Zahedpour et al., *Spatio-temporal optical vortices*

V. E. Leshchenko et al., *Relativistic harmonics D-scan for on-target temporal characterization of intense optical pulse*

C. Dorrer, S.-W. Bahk, *Characterization of spatiotemporal coupling with multispectral imaging*

A. Leblanc et al., *Phase-matching-free pulse retrieval based on transient absorption in solids*

R. Liao et al., *Active f-to-2f interferometer for carrier-envelope phase locking*

**Scientific and Industrial Applications** ..... 1137001-219

B. Wedel, S. Eilzer, *Ultrafast Laser Fiber Beam Delivery Systems – Status Quo and Future Challenges*

J. Qiao, *Ultrafast Lasers Based Optical and Photonic Fabrication*
