Volume 11300

Proceedings of SPIE 0277-786X, V. 11300

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Vertical-Cavity Surface-Emitting Lasers XXIV*, edited by Luke A. Graham, Chun Lei, Proceedings of SPIE Vol. 11300 (SPIE, Bellingham, WA, 2020) Seven-digit Article CID Number.

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v	<i>Authors</i>
vii	<i>Conference Committee</i>

SESSION 1 COMMERCIAL HIGH-POWER VCSELS

11300 02	Performance, manufacturability, and qualification advances of high-power VCSEL arrays at TriLumina Corporation (Invited Paper) [11300-1]
11300 05	Lasertel VCSEL development progress for automotive lidar [11300-4]
11300 06	Quality control optical characterization of NIR VCSEL based light sources for 3D imaging applications [11300-5]

SESSION 2 SINGLE-MODE APPLICATIONS

11300 09	Zero-order-free 2D beam pattern projecting on-chip lasers (Invited Paper) [11300-7]
11300 0B	Strain-controlled impurity-induced disordered apertures for high-power single-mode VCSELS [11300-9]
11300 0C	76X-nm VCSELS with wide tuning range designed for TDLAS [11300-10]

SESSION 3 HIGH-SPEED VCSELS: COMMERCIAL

11300 0E	20 and 40 Gbps data transmission with small VCSEL arrays [11300-12]
11300 0F	1×4 VCSEL arrays with uniform spectral and noise properties by using rotationally asymmetric oxide aperture for 400 Gbit/s applications [11300-13]
11300 0G	100Gb/s PAM4 oxide VCSEL development progress at Broadcom [11300-14]

SESSION 4 HIGH-SPEED VCSELS: EXPERIMENTAL

11300 0H	Quantum-dot oxide-confined 850-nm VCSELS with extreme temperature stability operating at 25 Gbit/s up to 180°C (Invited Paper) [11300-15]
----------	--

11300 OJ **Comparison of 850 nm VCSEL oxide aperture designs** [11300-17]

11300 OK **Oxidation stress induced birefringence in vertical cavity surface emitting lasers** [11300-18]

SESSION 5 VCSELS IN NOVEL MATERIAL SYSTEMS

11300 OM **Tunable room-temperature continuous-wave mid-infrared VCSELS (Invited Paper)** [11300-20]

SESSION 6 MEMS AND HIGH-CONTRAST GRATING DEVICES

11300 OR **MEMs-HCG VCSELS for emerging sensing and datacoms applications (Invited Paper)** [11300-26]

11300 OS **Widely tunable electrically pumped 1050nm MEMS-VCSELS for optical coherence tomography (Invited Paper)** [11300-27]

POSTER SESSION

11300 OW **894nm high orthogonal polarization suppression ratio vertical cavity surface emitting laser** [11300-30]
