KN1: Keynote Speech: AI in Cyber Security

Abstract: Recent developments of artificial intelligence (AI) have already had a strong impact on cyber-security technologies. In security products today there is certainly no lack of examples of AI systems capable of extracting key elements from the information flows coming from the network and automatically channeling them to local and remote decision points. These systems are based on the idea of the "telescope", in which a periphery of passive sensors acquires all the information that it can find, and an intelligent system customizes and packages them for local reactions as well as that of remote decision center. A first generation of AI systems following the telescope approach has already demonstrated its potential in various security applications. However, attackers today have learnt to decouple malware infiltration, operation and exfiltration. "Sleeper modules" randomizing hostile activity along time make telescope-based detection more problematic. The second generation of AI systems for cybersecurity is still in a preliminary stage, but it is already leading to a radical change. AI makes it possible to conceive a "cyber-battlefield" composed of geo-space (the physical world), space (satellite and airborne detectors) and cyberspace where (i) humans may not be involved in tactical decisions, and (ii) the information proactively gathered by actions in a part of the environment is used to make automatic decisions (i.e., without going back up a chain of command) in another area. The talk provides an overview of the two generations of AI techniques for cybersecurity and points to some key aspects of the field's evolution.

Bio: Prof. Ernesto Damiani is the Senior Director of Artificial Intelligence and Intelligent Systems Institute, Khalifa University, leader of the Big Data area at Etisalat British Telecom Innovation Center, and Full Professor at Università degli Studi di Milano, where he leads the SESAR Lab. Ernesto Damiani's work has more than 15,500 citations on Google Scholar and more than 6,100 citations on Scopus, with an h-index of 34. His areas of interest include Artificial Intelligence, Machine Learning, Big Data Analytics, Edge/Cloud security and performance, and cyber-physical systems. Ernesto has been a recipient of the Stephen Yau Award from the Service Society, of the Outstanding contributions Award from IFIP TC2, of the Chester-Sall Award from IEEE IES, and of a doctorate honoris causa from INSA - Lyon (France) for his contribution to Big Data teaching and research.

CB: Coffee Break

KN2: Keynote Speech: Advanced Image Processing Techniques for Satellite Remote Sensing

Abstract: There are now many rich sources of satellite data producing high resolution images derived from several modalities and updated at increasing frequency. These include high resolution RGB, SAR, LIDAR as well as multi and hyperspectral imaging. Applications vary widely and include environmental monitoring, agritech and surveillance. Environmental monitoring can include anything from measurement of ice floes, volcanic eruptions and changes to the oceans as well as rapidly evolving urban environments. Agritech applications are being developed to ensure that food production is maximised whilst controlling unnecessary water, fertilizer and energy use. Many applications require information from two different modalities to drive data fusion resulting in informed decision making. The complexity of the decision making combined with the volume, variety and velocity of data requires advanced signal and image processing techniques. These involve data reduction approaches, feature extraction, statistical classifiers, compressive sensing and more recently deep learning approaches to extract the appropriate information from the images. This talk will provide an overview of techniques and applications emerging in this area.

Bio: Prof. Stephen Marshall was born in Sunderland, England in 1958. He received a first class honours degree in Electrical and Electronic Engineering from the University of Nottingham in 1979 and a PhD in Image Processing from University of Strathclyde in 1989. From 1979-81 he worked at Plessey Office Systems, Nottingham as an Electronics Engineer. From 1981-1986 he worked as a lecturer in Paisley College of Technology and he had an exchange visit to University of Rhode Island in 1984. He has been employed at University of Strathclyde since 1986. His research activities have been focussed in the area of Non Linear Image Processing. In this time, he has pioneered new design techniques for morphological filters based on a class of iterative search techniques known as genetic algorithms. The resulting filters have been applied as four-dimensional operators to successfully restore old film archive material. In recent years he has established the Hyperspectral Imaging Centre at the University of Strathclyde. The aims to provide solutions to industrial problems through applied research and Knowledge Exchange. He has published over 200 conference and journal papers on these topics including IET, IEEE, SPIE, SIAM, ICASSP, VIE and EUSIPCO. He has also been a reviewer for these and other journals and conferences. He is a Fellow of the Institution of Engineering and Technology (IET) and a Senior member of the IEEE. He has also been successful in obtaining research funding from National, International and Industrial sources. These sources include EPSRC, EU, BBSRC, NERC and Innovate UK. Stephen Marshall is also the lead academic for the Vertically Integrated Project Program.

PD: Panel Discussion: Latest Trends in AI for Signal Processing and Information Security

L: Lunch

S1: Session 1

Meteorite Hunting Using Deep Learning and UAVs.....1

Aisha AlOwais and Safa Naseem (Sharjah Academy for Astronomy, Space Sciences and Technology, United Arab Emirates); Takwa M. Dawdi (Sharjah Academy for Astronomy, Space Sciences and Technology & University of Sharjah, United Arab Emirates); Mariam Abdisalam, Anas Adwan, Yusra Elkalyoubi and Khawla Hassan (Sharjah Academy for Astronomy, Space Sciences and Technology, United Arab Emirates); Ilias Fernini (University of Sharjah & Sharjah Center for Astronomy and Space Sciences, United Arab Emirates)

Cost Effective Real Time Vision Interface for the Simulation of FANUC Robots.....5

Bittu Scaria and Nazarudeen Abdul Aziz (Khalifa University, United Arab Emirates); Alavikunhu Panthakkan (University of Dubai, United Arab Emirates)

Spatio-temporal Analysis and Machine Learning for Accidents Severity Prediction.....9

Diena Aldogom and Nour Aburaed (University of Dubai, United Arab Emirates); Mina Ahmed (University of Dubai, United Arab Emirates); Saeed Al Mansoori (Mohammed bin Rashid Space Centre, United Arab Emirates)

CB: Coffee Break

S2: Session 2

Smart Healthcare Systems on Improving the Efficiency of Healthcare Services.....13

Sepideh Poorejbari (Pervasive and Cloud computing Lab, University of Birjand, Iran); Wathiq Mansoor (University of Dubai, United Arab Emirates)

Noninvasive Blood Glucose Estimation Using Pulse Based Cepstral Coefficients.....17

Shraddha K Habbu (Vishwakarma Institute of Information Technology & AISSM's Institute of Information Technology, India); Manisha Dale (Modern Education Society's College of Engineering, India); Rajesh Bhaskar Ghongade (Bharati Vidyapeeth University College of Engineering, India); Shrikant Joshi (Vishwakarma Institute of Information Technology, India)

Analysis of CNN Architectures for Pose Estimation of Noisy 3-D Face Images.....21

Randy Pangestu Kuswana, Akhmad Faqih and Benyamin Kusumoputro (Universitas Indonesia, Indonesia)

D: Dinner

S3: Session 3

PSD-based Phase Spectrum Compensation Procedure for Arabic Speech Enhancement.....25

A. M. Mutawa (Kuwait University, Kuwait)

Identifying Optimal Features for Multi-channel Acoustic Scene Classification.....29

Abigail Copiaco (University of Wollongong in Dubai, United Arab Emirates); Christian H Ritz (University of Wollongong, Australia); Nidhal Abdulaziz (University of Wollongong in Dubai, United Arab Emirates); Stefano Fasciani (University of Oslo, Norway)

Partial Discharge Signal Denoising Based on VMD and Group-Sparse TV Denoising.....33

Ragavesh Dhandapani (National University of Science and Technology, Oman); Imene Mitiche (Glasgow Caledonian University, United Kingdom (Great Britain)); Venkateswara Sharma Mallela (National University of Science and Technology, Oman); Gordon Morison (Glasgow Caledonian University, United Kingdom (Great Britain))

CB: Coffee Break

S4: Session 4

PIN Authentication Using Multi-Model Anomaly Detection in Keystroke Dynamics.....37

Mudhafar M. Al-Jarrah (Middle East University, Jordan); Ghofran Khalaf (Middle East University, Jordan); Saad Amin (Dubai University, United Arab Emirates)

Key-Dependent S-box Scheme for Enhancing the Security of Block Ciphers.....41

Amr Alasaad (King Abdulaziz City for Science and Technology, Saudi Arabia); Abdullah Alghafis (King Abdulaziz city for Science and Technology, Saudi Arabia)

Security and Privacy Challenges of Integrated Disruptive Technologies.....45

Jamal Al-Karaki (Abu Dhabi Polytechnic, United Arab Emirates); Amjad Gawanmeh (University of Dubai, United Arab Emirates)

Emirates)

L: Lunch

S5: Session 5

Image Steganography Using YCbCr Color Space and Matrix Pattern.....49

Moad Y Mowafi, Omar Oudat, Eyad Taqieddin and Omar Banimelhem (Jordan University of Science and Technology, Jordan)

Real-Time Dynamic Security for ProSe in 5G.....53

Filipe Conceição (Telecom SudParis & CEA Saclay, France); Nouha Oualha (CEA, LIST, France); Djamel Zeghlache (Institut Mines-Telecom, Telecom SudParis & UMR 5157 CNRS - Samovar, France)

Time-Domain Color Mapping for Color Vision Deficiency Assistive Technology.....57

Ingmar Besic (University of Sarajevo, Bosnia and Herzegovina); Samir Omanovic (ETF, Bosnia and Herzegovina); Dusanka Boskovic (University of Sarajevo, Bosnia and Herzegovina)

CB: Coffee Break

CS: Closing Session
