Volume 11375

Proceedings of SPIE 0277-786X, V. 11375

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Electroactive Polymer Actuators and Devices (EAPAD) XXII*, edited by Yoseph Bar-Cohen, Iain A. Anderson, Herbert R. Shea, Proceedings of SPIE Vol. 11375 (SPIE, Bellingham, WA, 2020) Seven-digit Article CID Number.

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

EAP AS EMERGING ACTUATORS

- 11375 02 EAP from 1999 to 2020: highlights from chairing the EAPAD conference for 22 years (Keynote Paper) [11375-1]
- 11375 05 Synthetic Muscle electroactive polymer (EAP) shape-morphing and pressure sensing for robotic (11375-4)

EAP ROBOTICS FOR EARTH AND SPACE

- 11375 06 The challenge of controlling a small Mars exploration plane [11375-5]
- 11375 07 Sticky space snakes: hyper-redundant DEA robots with electro-adhesive feet [11375-6]
- 11375 09 Development of a locomotion robot using deformable dielectric elastomer actuator without pre-stretch [11375-8]
- 11375 0A Applying IPMC to soft robots (Invited Paper) [11375-9]

LIQUID TECH FOR SOFT DEVICES AND EAP

- 11375 0Q Enhancing the permittivity of dielectric elastomers with liquid metal (Invited Paper) [11375-15]
- 11375 0R Novel silicone-ionic liquid composite with keratin utilized as pressure sensor [11375-16]

IONIC AND GEL ACTUATORS

- 11375 11 Electromechanical modeling of plasticized PVC gel actuators and the improvement in their performances with the additions of ionic liquids (Invited Paper) [11375-27]

EAP MATERIALS I

- 11375 17 Soft silicone elastomers with no chemical cross-linking and unprecedented softness and stability [11375-33]
- 11375 18 Utilizing slide-ring cross-linkers in polysiloxane networks for softer dielectric elastomer actuators [11375-34]

IONIC POLYMER METAL COMPOSITES

- 11375 19 Comparison of dynamic characteristics of active sensing methods of Ionic Polymer Metal Composite (IPMC) [11375-35]
- 11375 1B On structural models for ionic polymer metal composites (SPIE Best Student Paper Finalist) [11375-39]

EAP MATERIALS II

- 11375 1C Dielectric elastomer using CNT as an electrode [11375-40]
- 11375 1F Electric-field induced oscillating surface waves with programmable shapes [11375-43]

TWISTED ACTUATION

- 11375 1H On the fluctuation phenomenon of axial thermal stress of a torsional fishing-line artificial muscle (Twisted Polymer Fiber) actuator [11375-45]
- 11375 1I Experimental investigation of the lonely stroke behavior in supercoiled polymer artificial muscles [11375-46]
- 11375 1J Tailoring the tensile stroke of fishing line artificial muscle through prestress: a preliminary study [11375-47]

OPTIMIZED ACTUATION, COMPLIANCE, INSTABILITY, AND SWITCHING

- 11375 1M Optimization of prestretch and actuation stretch of a DEA-based cell stretcher [11375-50]
- 11375 1O Switching of amorphous silicon thin-film actuators for optically functional robotic devices [11375-52]

DIELECTRIC ELASTOMER PRINTING

- 11375 1U Soft and printable electrodes for flexible elastomer actuators [11375-59]
- 11375 1W Accelerated aerosol-jet-printing of stretchable rGO-electrodes for stacked dielectric elastomers by using a new hybrid atomizer [11375-61]
- 11375 1X Advanced 3D-printed EAP actuator applied to high precision large optical-quality surface fabrication: first results [11375-63]

11375 1Y Inkjet printed thin-film electro-adhesive device: manufacturing and characterization [11375-64]

DIELECTRIC ELASTOMER SELF-SENSING AND CONTROL

11375 20 Self-sensing position control of dielectric elastomer transducers [11375-66]

11375 21 Active deformation of dielectric elastomer for detection of biofouling [11375-67]

11375 22 Scaled tremor suppression with folded dielectric elastomer stack actuators [11375-68]

DEEP LEARNING AND GESTURE RECOGNITION, SENSING, AND DE ACTUATION

11375 24 The challenges of hand gesture recognition using dielectric elastomer sensors [11375-70]

11375 25 Force measurement based on dielectric elastomers for an intelligent glove providing worker assessment in the digital production [11375-71]

SENSORS, SENSOR ARRAYS, AND TEXTILES

11375 27 Compressible dielectric elastomer sensor for robotic application [11375-74]

11375 28 Experimental characterization of a smart dielectric elastomer multi-sensor grid [11375-75]

11375 2A 3D-printed and wireless piezoelectric tactile sensors [11375-77]

BIG ACTUATORS AND BIG VOLTS

11375 2C Soft robotic module actuated by silicone-based rolled dielectric elastomer actuators: modeling and simulation [11375-79]

11375 2D Design and fabrication of silicone-based dielectric elastomer rolled actuators for soft robotic applications [11375-80]

11375 2E A method to fabricate monolithic dielectric elastomer actuators [11375-81]

POSTER SESSION

11375 2L Dielectric elastomer based stretchable textile sensor for capturing motion [11375-90]
