**Volume 11489**

Proceedings of SPIE 0277-786X, V. 11489

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at [SPIDigitalLibrary.org](http://SPIDigitalLibrary.org).

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Systems Contamination: Prediction, Control, and Performance 2020*, edited by Carlos E. Soares, Eve M. Wooldridge, Bruce A. Matheson, Proceedings of SPIE Vol. 11489 (SPIE, Bellingham, WA, 2020) Seven-digit Article CID Number.

Copying of material in this book for internal or personal use, or for the internal or personal use of specific clients, beyond the fair use provisions granted by the U.S. Copyright Law is authorized by SPIE subject to payment of copying fees. The Transactional Reporting Service base fee for this volume is \$21.00 per article (or portion thereof), which should be paid directly to the Copyright Clearance Center (CCC), 222 Rosewood Drive, Danvers, MA 01923. Payment may also be made electronically through CCC Online at [copyright.com](http://copyright.com). Other copying for republication, resale, advertising or promotion, or any form of systematic or multiple reproduction of any material in this book is prohibited except with permission in writing from the publisher. The CCC fee code is 0277-786X/20/\$21.00.

Printed in the United States of America by Curran Associates, Inc., under license from SPIE.

Publication of record for individual papers is online in the SPIE Digital Library.

---

**Paper Numbering:** *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

# Contents

---

## CONTAMINATION CONTROL AND PLANETARY PROTECTION FOR SPACE MISSIONS I

---

- 11489 03 **Mars 2020: mission, science objectives and build (Invited Paper)** [11489-1]
- 11489 04 **Predicting terrestrial contamination of the Mars 2020 sample caching system with novel multispecies outgassing and transport models** [11489-2]
- 11489 07 **The role of purged bakeout method in achieving the required cleanliness for the polarimetric and helioseismic imager on the Solar Orbiter mission** [11489-5]

---

## CONTAMINATION CONTROL AND PLANETARY PROTECTION FOR SPACE MISSIONS II

---

- 11489 0A **Developments on the instrument performance predictions and contamination modelling: the practical approach of ESA's Sentinel-4 mission** [11489-8]
- 11489 0B **NASA's planetary protection policies revised in response to changes in space exploration** [11489-9]

---

## SPACE SYSTEMS CONTAMINATION ANALYSIS AND MODELING I

---

- 11489 0C **CFD and DSMC methods for tracking gases and droplets behaviors within the plume** [11489-10]
- 11489 0D **Space launch vehicle transient particle redistribution modeling and implications for optically sensitive payloads** [11489-11]
- 11489 0E **A new dynamic outgassing procedure to predict reemission and deposition values of contaminants** [11489-12]
- 11489 0F **Desorption, diffusion, reflections, and reemission: the outgassing molecules elusive behaviors** [11489-13]
- 11489 0G **Species separation of molecular contamination from space materials by QTGA/MS** [11489-14]

---

## SPACE SYSTEMS CONTAMINATION ANALYSIS AND MODELING II

---

- 11489 0H **Optimization, development, and validation of the contamination transport simulation code** [11489-15]

11489 OK **Particulate and molecular contamination control in EUV-induced H<sub>2</sub>-plasma in EUV lithographic scanner** [11489-18]

---

**CONTAMINATION CONTROL PRACTICES AND APPLICATIONS TO SPACE SYSTEMS I**

---

11489 OM **In-situ measurement technique of contamination morphology under vacuum and low temperature condition** [11489-20]

11489 ON **Evaluation of protection films for optics in space industry** [11489-21]

11489 OO **Micro Raman spectroscopy for characterizing molecular contamination on space flight hardware** [11489-22]

11489 OQ **Particle deposition rate application in system contamination control** [11489-24]

---

**CONTAMINATION CONTROL PRACTICES AND APPLICATIONS TO SPACE SYSTEMS II**

---

11489 OS **Mass decrease in contaminants by photocatalytic decomposition of TiO<sub>2</sub> in vacuum** [11489-26]

---

**NEW SUBMISSIONS**

---

11489 OT **Preparing for Mars 2020 and future space missions: technology advancements driving contamination control requirements and cleanroom protocols** [11489-27]
