Volume 11545

Proceedings of SPIE 0277-786X, V. 11545

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Semiconductor Lasers and Applications X*, edited by Ning Hua Zhu, Werner H. Hofmann, Jian-Jun He, Proceedings of SPIE Vol. 11545 (SPIE, Bellingham, WA, 2020) Seven-digit Article CID Number.

Publication of record for individual papers is online in the SPIE Digital Library.

SPIE. DIGITAL LIBRARY

SPIDigitalLibrary.org

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

SEMICONDUCTOR LASERS AND APPLICATIONS I

- 11545 02 **Kilowatt line beam from a 905nm pulsed diode laser module for LiDAR applications (Invited Paper)** [11545-1]
- 11545 03 **Design of GaN surface emitting laser based on angular-symmetry-breaking concentric-ring surface grating** [11545-2]
- 11545 04 **Measurement of the threshold ion number in the formation of an ultracold plasma** [11545-3]
- 11545 05 **Wideband physical random optical chaos generation using semiconductor lasers** [11545-4]
- 11545 07 **Linear frequency-swept DFB laser array used in sensing system** [11545-6]

SEMICONDUCTOR LASERS AND APPLICATIONS II

- 11545 08 **Fast wavelength-switching DFB laser array with 16 channels based on the REC technology (Invited Paper)** [11545-7]
- 11545 09 **Tunable V-cavity laser based on half-wave multimode interference reflector in O-band** [11545-8]
- 11545 0A **Digital back-propagation in optical fiber communication systems considering equalization enhanced phase noise** [11545-9]
- 11545 0B **Numerical investigation on the frequency-modulated continuous-wave generation based on an optically injected semiconductor laser with optical feedback stabilization** [11545-10]
- 11545 0C **Fast physical random bit generation based on an optoelectronic delay loop pumped by a semiconductor laser under a modulated optical feedback** [11545-11]
- 11545 0D **Unpredictability-enhanced broadband chaotic signal generation based on vertical-cavity surface-emitting lasers subject to dual chaotic optical injection** [11545-12]
- 11545 0E **Quasi-continuous wavelength tuning of single-mode interband cascade lasers based on V-coupled cavity** [11545-13]

POSTER SESSION

- 11545 0H **Research on linewidth broadening technology of semiconductor laser based on OptiSystem [11545-16]**
- 11545 0I **Numerical analysis of the back-coupling efficiency of the grating feedback external-cavity diode laser [11545-17]**
- 11545 0J **A high-performance annularly stacked laser diode pump for a solid state laser [11545-18]**
- 11545 0N **Vertical external cavity surface emitting lasers with emitting wavelength of 1040-1200 nm grown by metal organic chemical vapor deposition [11545-22]**
- 11545 0O **Multiwavelength cooling-free pump array [11545-23]**
