Volume 11645

Proceedings of SPIE, 1605-7422, V. 11645

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at [SPIDigitalLibrary.org](http://SPIDigitalLibrary.org).

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Optical Elastography and Tissue Biomechanics VIII*, edited by Kirill V. Larin, Giuliano Scarcelli, Proceedings of SPIE Vol. 11645 (SPIE, Bellingham, WA, 2021) Seven-digit Article CID Number.

---

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

# Contents

---

## KEYNOTE

---

- 11645 06 MLL4 protein tunes chromatin compaction and regulates nuclear mechanical stress (Keynote Paper) [11645-4]

---

## OCE II

---

- 11645 0K Characterizing mechanical properties of human blood clots using optical coherence elastography [11645-28]

---

## BRILLOUIN ELASTOGRAPHY

---

- 11645 0Q High-resolution line-scanning Brillouin microscopy for fast and low phototoxicity live-imaging of mechanical properties in biology [11645-8]

---

## TISSUE MECHANICS

---

- 11645 0X Optical coherence elastography to determine the high- and low-grade colon adenocarcinoma [11645-39]

---

## POSTER SESSION

---

- 11645 19 Four-dimensional (4D) phase velocity optical coherence elastography [11645-43]
- 11645 1A Impulsive stimulated Brillouin spectroscopy for assessing viscoelastic properties of biologically relevant aqueous solutions [11645-44]
- 11645 1D Characterizing mechanical properties of soft tissues using non-contact displacement measurements: how should we assess the uncertainty? [11645-47]
