**Volume 11661**

Proceedings of SPIE, 1605-7422, V. 11661

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at [SPIDigitalLibrary.org](http://SPIDigitalLibrary.org).

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Plasmonics in Biology and Medicine XVIII*, edited by Tuan Vo-Dinh, Ho-Pui A. Ho, Krishanu Ray, Proceedings of SPIE Vol. 11661 (SPIE, Bellingham, WA, 2021) Seven-digit Article CID Number.

---

**Paper Numbering:** *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

# Contents

---

## PLASMONICS AND SERS

---

- 11661 03 Translation of SERS sensing to real-world settings through the combination with shifted-excitation Raman difference spectroscopy (SERDS) [11661-18]

---

## PLASMONIC NANOSTRUCTURES AND DETECTION

---

- 11661 0D Low birefringence measurement with focused surface plasmon towards label free detection of dermatoheliosis [11661-8]
- 11661 0E Modelling of plasmon-enhanced fluorescence in a single light-harvesting complex near a gold nanorod [11661-9]
- 11661 0F Optical monitoring the dynamics of plasmonic nanobubbles [11661-10]

---

## PLASMONIC SENSING

---

- 11661 0M Label-free detection of mutations in the HIV genome using a surface plasmon resonance biosensor [11661-13]
- 11661 0O Optical bacteriophage susceptibility testing by SPR (surface plasmon resonance) [11661-15]
- 11661 0P Machine learning improves the way to design meta-plasmonic biosensors [11661-16]
