Volume 11732

Proceedings of SPIE 0277-786X, V. 11732

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Dimensional Optical Metrology and Inspection for Practical Applications X*, edited by Kevin G. Harding, Song Zhang, Beiwen Li, Proc. of SPIE 11732, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

3D METHODS

- 11732 03 **High-resolution structured light 3D vision for fine-scale characterization to assist robotic assembly [11732-1]**
- 11732 04 **Mid-wave infrared 3D sensor based on sequential thermal fringe projection for fast and accurate shape measurement of transparent objects [11732-2]**
- 11732 05 **Low latency real time 3D sensor utilizing optimized aperiodic fringe patterns [11732-3]**
- 11732 06 **3D scene capture using passive IR and focus diversity [11732-4]**
- 11732 07 **Fringe pattern denoising based on robust principal component analysis [11732-5]**
- 11732 08 **A data fusion approach to improving moving object measurement using phase-shifting profilometry [11732-6]**

OPTICAL INSPECTION METHODS AND APPLICATIONS

- 11732 09 **Performance evaluation of line confocal imaging for surface roughness measurement application (Invited Paper) [11732-7]**
- 11732 0A **Standard-compliant detection of fillet weld surface imperfections for MAG-welding using a 3D-line scanner [11732-8]**
- 11732 0B **A new approach for controlling of curved cutting edges of toroid-shaped end-milling cutter [11732-9]**
- 11732 0C **Detection and tracking of laser damage on LMJ vacuum windows by digital image correlation [11732-10]**

POSTER SESSION

- 11732 0D **Algorithm for the automated determination of heating areas during metal processing with numerically controlled machines [11732-11]**
- 11732 0E **Algorithm for fusing data obtained by thermal, 3D, and the visible range cameras [11732-12]**
