Volume 11739

Proceedings of SPIE 0277-786X, V. 11739

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Fiber Optic Sensors and Applications XVII*, edited by Robert A. Lieberman, Glen A. Sanders, Ingrid U. Scheel, Proc. of SPIE 11739, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

SESSION 1 EXOTIC GUIDED-WAVE STRUCTURE FOR SENSING

- 11739 03 Fabrication and application of single crystal fiber via laser heated pedestal growth system [11739-2]
- 11739 04 Guideless optical sensing using space-time surface plasmon polaritons [11739-3]

SESSION 2 FIBER OPTIC SENSORS AND APPLICATIONS

- 11739 08 Distributed dynamical temperature measurement of the rotor of small rotating machines using Fiber Bragg Gratings (FBGs) sensors [11739-7]
- 11739 0B Atomic layer deposited TiO₂ on optical fiber for pH sensing at 80 °C [11739-10]
- 11739 0C Performance improvement of phase-optical time domain reflectometry (Φ -OTDR) based on wavelength diversity technique [11739-11]
- 11739 0D Development of femtosecond random gratings for fiber laser and sensor applications (Invited Paper) [11739-12]

SESSION 3 HARSH ENVIRONMENT SENSORS FOR ENERGY APPLICATIONS

- 11739 0E Metallic coating enabled optical fiber sensor for distributed corrosion monitoring [11739-13]
- 11739 0F Low-cost optical fiber based temperature sensor for real-time health monitoring of power transformers [11739-14]
- 11739 0H Multi-parameter fiber optic sensing for harsh nuclear environments [11739-16]
- 11739 0I Optical-fiber based hydrogen sensing at high temperature using ALD coated oxide sensing layers [11739-17]

POSTER SESSION

- 11739 0J Redirecting sunlight for indoor illumination [11739-18]
