SPIE

Volume 11740

Proceedings of SPIE 0277-786X, V. 11740

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Infrared Imaging Systems: Design, Analysis, Modeling, and Testing XXXII*, edited by Gerald C. Holst, David P. Haefner, Proc. of SPIE 11740, Seven-digit Article CID Number (DD/MM/YYYY): (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

INTRODUCTION

11740 04 High throughput thermal camera characterization (Invited Paper) [11740-3]

SYSTEMS

11740 05 High performance cooled LWIR imager optics for optronics mast systems [11740-4]

11740 06 Digital readout integrated circuit for high dynamic range infrared imaging [11740-5]

TESTING

11740 0A Performance characterization of low light level color imaging sensors [11740-9]

MODELING

11740 0E Fast signature preserving LWIR detail uncovering and image enhancement with dedicated color tables [11740-13]

11740 0F Analytical solution for Gaussian pulse in RC circuit [11740-14]

11740 0G Deep echo state neural network model for light propagation through strong atmospheric turbulence [11740-15]

11740 0H Analyzing the impact of vibration on YOLO algorithm performance [11740-16]

11740 0I Enhanced computational imaging with encoding masks optimized by deep neural networks [11740-17]

11740 0J Ground-level temperature-emissivity-based contrast enhancement with uncooled multiband LWIR cameras [11740-18]

11740 0K Evaluation of augmented training datasets [11740-19]

11740 0N A machine learning approach to improving quality of atmospheric turbulence simulation [11740-22]

- 11740 0P Towards development of improved metrics for quantifying turbulence imposed degradation of long-range video [11740-24]
- 11740 0T The representation of complex image processing functions in EO/IR sensor system models and simulations [11740-35]

WINDOWS AND DOMES

- 11740 0W Performance verification of sun blocking filter for satellite based laser communication terminals [11740-29]
- 11740 0Y Temperature dependent spectral line shifts in crystalline and polycrystalline materials [11740-31]
- 11740 0Z Development of near-net dome shaped ZnS window for the infrared region using Spark Plasma Sintering technique [11740-32]
- 11740 10 Thermal shock resistance test on ZnS domes [11740-33]
