Volume 11751

Proceedings of SPIE 0277-786X, V. 11751

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIEDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Disruptive Technologies in Information Sciences V*, edited by Misty Blowers, Russell D. Hall, Venkateswara R. Dasari, Proc. of SPIE 11751, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

ADVANCED COMPUTING ARCHITECTURE

11751 09 **Implications of the quantum DNA model for information sciences** [11751-6]

ADVANCEMENTS IN ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING

11751 0B **Deep learning to predict the modulation schemes of real OFDM signals** [11751-8]

11751 0C **Aspects of hyperdimensional computing for robotics: transfer learning, cloning, extraneous sensors, and network topology** [11751-9]

11751 0D **Towards adaptive and curious artificial agents: learning, perception, and planning in dynamic uncertain environments (Invited Paper)** [11751-10]

ARTIFICIAL INTELLIGENCE IN TACTICAL OPERATIONS

11751 0E **Deep neural network model optimizations for resource constrained tactical edge computing platforms (Invited Paper)** [11751-11]

11751 0F **Efficient normalization techniques to optimize AI models for deployment in tactical edge (Invited Paper)** [11751-12]

RESILENCY AND TRUST IN ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING

11751 0G **Adversarial robustness of machine learning-based indoor positioning systems** [11751-13]

11751 0I **Automating defense against adversarial attacks: discovery of vulnerabilities and application of multi-INT imagery to protect deployed models** [11751-15]

ADVANCES IN COMPUTER AND NETWORK SECURITY

11751 0J **Holistic defenses against microarchitectural attacks** [11751-17]

11751 0K **Zigbee as a candidate standard for use in anomaly detection in IoT LANs** [11751-18]

11751 0L **Attribable multi-agent learning (Invited Paper)** [11751-19]

11751 0N **Risk management applications for disruptive technologies (Invited Paper)** [11751-21]

11751 0O **Comparison of elliptical unwrapping and frontal projection for off-angle iris normalization**
[11751-22]
