SPIE

Volume 11757

Proceedings of SPIE 0277-786X, V. 11757

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Smart Biomedical and Physiological Sensor Technology XVIII*, edited by Brian M. Cullum, Douglas Kiehl, Eric S. McLamore, Proc. of SPIE 11757, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

ISSN: 0277-786X

ISSN: 1996-756X (electronic)

ISBN: 9781510643512

ISBN: 9781510643529 (electronic)

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

WEARABLE SENSORS I

- 11757 02 Deterioration of textile vs. electronic components over time in athletic wearable devices [11757-1]
- 11757 03 Show me the SO₂: real-time LED oximetry display on multimodal wearable devices [11757-2]
- 11757 07 Low-voltage capacitive measurement methodology for dielectric elastomers [11757-6]
- 11757 08 Thin-film nanostructure-based enzymatic alcohol sensor for wearable sensing and monitoring applications [11757-7]

WEARABLE SENSORS II

- 11757 0D Where the silicone meets the wrist: direct over molding of biometric sensors on a wearable band [11757-12]

SMART DEVICES

- 11757 0E Sensing and removal of chromium metal ion from water using spectroscopic and adsorption techniques [11757-13]
- 11757 0F Acoustic steering of audible and ultrasonic waves using Thermally-induced Optical Reflection of Sound (THORS) [11757-14]
- 11757 0G Visualization of photothermal interaction of Bessel beam with gastric tumor based on COMSOL [11757-15]
- 11757 0H Miniaturized, wireless multi-channel potentiostat platform for wearable sensing and monitoring applications [11757-16]
- 11757 0I Sensitivity-enhanced localized surface plasmon resonance biosensing format dedicated for point-of-care testing tools [11757-17]

MEDICAL AND PHYSIOLOGICAL DEVICES

- 11757 0M **Operator state monitoring via pupilometry: measuring mental workload under varying luminance conditions [11757-21]**
- 11757 0Q **Implementation of novel TMS coils for multisite brain stimulations [11757-25]**

MATERIAL DEVELOPMENT AND FUNDAMENTAL STUDIES

- 11757 0S **Design of ZnSe QPM for wide transparency sensing and laser applications [11757-26]**
- 11757 0T **Studies of microstructure, dielectric behavior of mg-doped and undoped BCTO ($\text{Bi}_{2/3}\text{Cu}_3\text{Ti}_4\text{O}_{12}$) ceramics [11757-27]**
- 11757 0X **Surface characteristics of polymer nanocomposites [11757-31]**
