SPIE

Volume 11802

Proceedings of SPIE 0277-786X, V. 11802

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Nanoengineering: Fabrication, Properties, Optics, Thin Films, and Devices XVIII*, edited by Balaji Panchapakesan, André-Jean Attias, Wounjhang Park, Proc. of SPIE 11802, Seven-digit Article CID Number (DD/MM/YYYY): (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

NANOSTRUCTURED THIN FILMS

- 11802 02 Morphological effects on the excitation of surface waves in the grating-coupled configuration [11802-18]
- 11802 05 Fabrication of plasmonic nanoslit aperture platform for biomolecule analysis [11802-15]
- 11802 06 Introducing 'low cost large scale' hydrophobic SERS substrate [11802-16]

NANO- AND MICRO-OPTICS

- 11802 0B Characterization of the optical performance and scatter of an infrared dielectric metasurface lens [11802-27]
- 11802 0C A method to improve the optical coupling into the bioinspired peptide micro-waveguides using aberrated objective [11802-24]
- 11802 0D High-uniformity dielectric U-shaped surface relief grating coupler for AR headsets [11802-25]
- 11802 0E Self-stabilisation of a resonance of microresonator based on optical fibre with active core [11802-26]

POSTER SESSION

- 11802 0L The polymer nanocomposites embedded particles size and agglomeration effect on the effective refractive index tuning [11802-55]
- 11802 0N A silicon integrated photonic sensor using Bragg gratings and signal post-processing [11802-35]
- 11802 0O A small footprint Y-branch power splitter based on simplified coherent coupling on Silicon Nitride [11802-36]
- 11802 0P Modelling of thermophysical phenomena at cutting tools with thin self-organising coatings [11802-37]
- 11802 0Q Extraordinary enhancement of the transverse magneto-optical Kerr effect with high-refractive-index nanostructures [11802-38]
- 11802 0R Electrically conductive nanocomposite films deposition and electrical discharge machining of ceramic surfaces to generate functional microtextures [11802-39]

- 11802 0T Effect of PACVD deposition of nitride and Si-containing amorphous hydrogenated carbon films on the tribological characteristics of SiAlON ceramics [11802-41]
- 11802 0U Single-tunable and dual-wavelength operation of a passive Q-switch double-Clad Er-Yb fiber laser based on the use of a titanium-oxynitride-coated fiber ball lens [11802-43]
- 11802 0V Combined processing of optical parts through surface polishing with a beam of fast argon atoms and deposition of nanostructured protective films by magnetron target sputtering [11802-44]
- 11802 0W Validation of the effects of growth parameter variations on the optical characteristics of InAs QD through Nextnano simulations [11802-45]
- 11802 0X On the reconfigurable phase change medium-based hyperbolic metamaterials [11802-46]
- 11802 0Y Graphene-strontium titanate-based metamaterial for optical sensing [11802-47]
- 11802 0Z Polarization effects analysis in tilted subwavelength periodical waveguides [11802-49]
- 11802 10 Gray wolf optimization of photonics crossing waveguides [11802-50]
- 11802 11 Polarization-insensitive optical modulators based on single ENZ-graphene layers [11802-51]
- 11802 12 Thermal effects in hybrid optical photonic organic devices [11802-52]
- 11802 13 Flexible and optically transparent radio frequency antennas enabled by metallic meshes [11802-53]
- 11802 14 Green synthesis of silver nanoparticles by pulsed laser ablation using citrus limetta juice extract for clad-modified fiber optic gas sensing application [11802-54]
