SPIE

Volume 11819

Proceedings of SPIE 0277-786X, V. 11819

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *UV/Optical/IR Space Telescopes and Instruments: Innovative Technologies and Concepts X*, edited by Allison A. Barto, James B. Breckinridge, H. Philip Stahl, Proc. of SPIE 11819, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

MISSION CONCEPTS I - CUBESATS & SMALL-SATS

- 11819 03 **Aspera: the UV SmallSat telescope to detect and map the warm-hot gas phase in nearby galaxy halos** [11819-2]
- 11819 04 **The versatile CubeSat Telescope: going to large apertures in small spacecraft** [11819-1]
- 11819 05 **ORCAS – Orbiting Configurable Artificial Star Mission Architecture** [11819-3]
- 11819 06 **The Photo-z Infrared Telescope (PIRT) – a space instrument for rapid follow up of high-redshift gamma-ray bursts and electromagnetic counterparts to gravitational wave events** [11819-24]

MISSION CONCEPTS II - MIDEX & SOLICITATIONS

- 11819 07 **Measurements: the nexus between astronomical data and information** [11819-7]
- 11819 08 **The Polstar high resolution spectropolarimetry MIDEX mission** [11819-5]

MISSION CONCEPTS III - LARGE TELESCOPES

- 11819 09 **The role of standardization in the development of next generation large space telescopes** [11819-8]
- 11819 0A **Efficient thermal architecture for large space telescopes** [11819-25]
- 11819 0B **Extreme dimensional stability thermal control test** [11819-9]
- 11819 0C **Size advantages of starship cargo vessel for Giant Magellan Telescope Observatory (GMTO) type space telescope launch** [11819-10]

INSTRUMENT & MISSION PROGRESS

- 11819 0E **Updated simulation tools for Roman coronagraph PSFs** [11819-13]
- 11819 0F **Sensor characterization for the ULTRASAT space telescope** [11819-14]

INNOVATIVE TECHNOLOGIES I

- 11819 OG **Influence of evaporation rate and chamber pressure on the FUV reflectance and physical characteristics of aluminum films** [11819-18]
- 11819 OH **The Ultraviolet Micromirror Imaging Spectrograph: a multi-object spectrograph for far UV astronomy** [11819-15]
- 11819 OI **An on-chip astrophotonic spectrograph with a resolving power of 12,000** [11819-17]
- 11819 OJ **3D printed silicon carbide scalable to meter-class segments for Origins Space Telescope** [11819-19]

POSTER SESSION

- 11819 OL **Far-ultraviolet optical fibers for instrumentation in the sub-200 nm regime** [11819-22]
- 11819 OM **Star-Planet Activity Research CubeSat (SPARCS) test tank thermal methods** [11819-20]
- 11819 ON **Black-silicon as a wideband infrared absorber for the space instruments: fabrication, modeling, and characterization** [11819-16]
