

# **IABSE Congress Ghent 2021**

## **Structural Engineering for Future Societal Needs**

Held online

Ghent, Belgium  
22 - 24 September 2021

Volume 1 of 3

### **Editors:**

**H.H. (Bert) Snijder**  
**Bart De Pauw**

**Sander van Alphen**  
**Pierre Mangeot**

ISBN: 978-1-7138-3625-4

**Printed from e-media with permission by:**

## Contents

<b>Message from the President</b>	<b>11</b>
<b>Message from the Organising Committee</b>	<b>12</b>
<b>Organising Committee</b>	<b>13</b>
<b>Message from the Scientific Committee</b>	<b>14</b>
<b>Scientific Committee</b>	<b>15</b>
<b>About IABSE</b>	<b>16</b>
<b>Sponsors</b>	<b>17</b>
<b>Keynote speakers</b>	<b>18</b>
<b>Keynotes</b>	<b>20</b>
The transition to sustainable concrete in the Netherlands through network governance	21
How can the construction industry serve the needs of a society threatened by climate change?	25
Risk intelligence of structural systems: concepts and recent developments	33
Oosterweel – from an underground and even underwater road infrastructure plan to an urban transformation project	35
<b>Structural safety and reliability with respect to climate change</b>	<b>42</b>
Influence of climate change on thermal stresses in concrete box girders	43
Assessment of long-term structural reliability considering climate change effects	52
<b>Circularity, re-use and sustainability of structures</b>	<b>61</b>
Lessons learned from using a donor skeleton in a 3 storey office building	62
Re-use of a 300 m steel arch bridge	70
Modeling of the behaviour of concrete elements containing a self-healing agent	79
Choosing an appropriate housing methodology for holistic societal needs	85
Effective re-use of existing structures towards the sustainable society at East Japan Railway Company	94
Rehabilitation of a 200 m long pedestrian bridge with carbon textile reinforced concrete	101
The assessment, strengthening and widening of Thames Bray Bridge	109
Materials in bridge engineering: creating a more sustainable future	115
Influence of the floor systems on the sustainability of reinforced concrete structures	124
Sustainable and environmentally friendly zinc coatings for protecting steel bridges in Europe	133
Exploring circularity: Europengineers on piano	141
The effects of expansion joint design on bridge life-cycle costs - initial investment versus total cost of ownership	150
Small-scale testing for feasibility of rubblized concrete foundations	159
The relocation of a heritage bridge	166
Steel: friend or foe in the face of the climate emergency?	175
Protection and repair of concrete structures as an important contribution to sustainability	183
Overcoming the limitations of recycled concrete aggregates in Belgium	191
The use of a new slab track system in the renovation of the Vierendeel railway bridges in Mechelen	197
The circular arch viaduct: reduce, re-use & recycle in practice	206
Re-using existing prefabricated prestressed concrete girders	215
<b>Emission free building of structures</b>	<b>223</b>
Crafting a framework of embodied carbon education, tracking, and reduction for US-based structural engineers	224
<b>Enhancing resilience of civil infrastructure to hurricane and thunderstorm hazards under changing climate</b>	<b>232</b>
A numerical approach for the assessment of crosswind effects on barrier-protected trains running on bridges	233
Hurricane risk assessment of offshore wind turbines under changing climate	241

Reliability of bridges considering the effect of local scour	249
Afsluitdijk climate resilient with XblocPlus	256
<b>Structural bearings and anti-seismic devices</b>	<b>265</b>
Investigation of seismic response of rocking column with a novel mechanical connection device	266
An energy-robust nonlinear energy sink with inerter	275
Quantifying damage in the steel shims of seismic isolation rubber bearings due to support rotation	284
Dynamic properties of the isolators used in the Green Museum Library (Taiwan)	293
Bearing systems for light rail bridges	299
Condition assessment of in situ elastomeric bearings	305
<b>Towards extending the service life of existing concrete infrastructure through advanced assessment methods</b>	<b>312</b>
Capacity of prestressed concrete bridge decks under fatigue loading	313
Nonlinear finite element analysis of tests of reinforced concrete slabs	322
Measuring heavy traffic with WIM-ROAD and WIM-BRIDGE systems in an urban environment	331
Performance assessment on degrading concrete structures including considerations on the time variant alteration	341
Prolonging the lifetime of existing reinforced concrete infrastructures with thermal sprayed zinc coating anodes	349
Automated structural assessment of existing reinforced concrete underpasses	356
<b>Structural health monitoring</b>	<b>365</b>
A finite element model updated by artificial neural networks to explain the behaviour of the Z24 Swiss bridge in different temperature states.	366
Study on temperature field effects on RC high-pier bridge	376
A fiber optics enriched Digital Twin for assessment of reinforced concrete structures	382
Benchmark model updating for cable stayed bridges	391
Long-term vibration monitoring on railway bridge KW51 in Leuven, Belgium	398
Modelling the non-linear behaviour of the pot bearings of railway bridge KW51	404
Characterization of operational vibrations of highway bridges Via Lidar	412
Condition assessment of several bridges in Sofia based on visual inspection and as-built drawings	418
Predicting strains in embedded reinforcement based on surface deformation obtained by digital image correlation technique	425
Bridge weigh-in-motion using bridge influence surface and computer vision: an experimental study	435
Evaluation of the effect of operational modal analysis algorithms on identified modal parameters of railway bridges	441
Application of close range photogrammetry in structural health monitoring by processing generated point cloud datasets	450
A camera calibration method for bridge live load identification using plane marks on the pavement	459
A 3-D detection method of moving traffic loads based on the stereo vision	467
Bayesian model updating of a large-span steel tied arch bridge: an experimental study	475
Using an ambient vibration test to identify damage in a sculpture	481
The use of SHM to monitor and evaluate bridge movements – absolute and accumulated – at the structure’s bearings and expansion joints	489
Comparison on outlier detection methods using measured data from a long span tied-arch bridge	497
Denosing of structural health monitoring data: method and coding	504
An integrated solution for tension monitoring in bridge hangers and stay cable by means of vibration measurement	511
A business case for risk-informed bridge monitoring using the value of information	518
Design and construction of a three-span continuous box girder model	526
Bridge-vessel anti-collision monitoring system: design and implementation	534
Temperature distribution in different bridges types based on data from SHM systems	540

Image stabilization technology for active bridge-vessel anti-collision monitoring system	549
Acceleration data quality assessment for bridge structural health monitoring via statistical and deep-learning approach	555
Benefits of using digital image correlation systems for advanced structural assessment	561
Vibration-based structural health monitoring from operational long-gauge fiber optic strain data	571
The application of black-box modeling in long-term tunnel deformation monitoring	580
<b>All types of bridges</b>	<b>588</b>
Dynamic loadings of moving vehicles on curved concrete segmental single box girder bridges	589
Slip coefficient of 90-year-old riveted joint surface with red lead paint for corrosion	598
Structural design criteria for road bridges made of UHPC large prefabricated parts - approaches to possible CO2 savings potential in bridge construction	605
FE analysis of continuous shear connector	615
Climate impact estimation – from feasibility study to handover	622
Framework for facility management of bridge structures using digital twins	629
Control and optimization of UAV measurement parameters for alignment measurement in bridge construction	638
A prediction method for cable forces of cable-stayed bridges using fuzzy processing and Bayes estimation	644
Durability design of composite bridges with given life in seasonal freezing region	653
Exploitation problems with particular road and railway composite bridges in Bulgaria	660
Addressing society's various needs in the selection and use of key bridge components	666
Lateral torsional buckling of plate girder composite bridges – general method	675
City of Ghent – adapting infrastructure to societal needs	682
Design of a funicular concrete bridge with knitted formwork	690
The impact of heavy vehicle platoons on bridge traffic loads	700
The modernisation of the Albert Canal and its bridges	709
Eldvatn bridge – Iceland's first network arch bridge	718
Framework for investigating the effect of different design lives on the design of bridges	726
Development of a traffic load model for bridge structures within an urban subway system	734
“La Belle Liégeoise”, the new footbridge in Liège	741
Updating bridge axle loads using WIM in Switzerland	748
<b>Additive manufacturing</b>	<b>757</b>
Automated structural design for 3D printed circular composite bridges	758
<b>Structural analysis and optimisation</b>	<b>767</b>
Out-of-plane buckling of arches with rectangular cross-sections and curved webs	768
Numerical evaluation of horizontal cracking potential in continuously reinforced concrete pavement under varying saw-cut depths	776
Elaboration of a rapid assessment method for masonry arches	783
Application of mobile devices for the rapid assessment of masonry arch bridges – worked example and benchmarking	793
Numerical analyses on flexural performance of prefabricated UHPC link slab	801
Nonlinear structural analysis of a masonry wall	809
Resistance of prestressed bridge girders to diagonal tension cracking	819
Optimization in a realistic structural engineering context: redesign of the Market Hall in Ghent	828
Application potential of textile reinforcement in concrete construction for infrastructure buildings: environmental performance and availability	836
Experimental study on anti-collision device using titanium steel and recycle tires	845
Large-scale load carrying capacity test of curved steel box girders with/without horizontal stiffeners subjected to bending	852
Parametric bridge design – reinforcement design	860
Experimental performance of optimized trusses	868

Parametric study of orthotropic steel decks with open ribs using FEA	877
Analysis for optimization of spiral reinforcement in pre-fabricated bridge columns	885
A multi-objective genetic algorithm for optimal design of cable networks with external dampers and cross-ties	893
Design and analysis of the Wing-spread Bridge: a pedestrian bridge in the Binjiang Avenue, Shanghai	901
Impact of the structural model used on the steel hall fire resistance assessment	909
Multi-level objective optimization method for high rise frame shear wall structure	917
Application of viscous dampers for structural response reduction in building renovation	925
<b>Concepts and methods for the performance assessment of existing structures</b>	<b>932</b>
Nonlinear finite element analysis for structural assessment of existing bridges: network manager experiences	933
Correlation between the rust colour distribution rate and corroded surface characteristics of galvanized steel wires	941
The development of a BIM data structure for bridge maintenance	949
Evaluation method of defects in concrete structures using hammer test by time-frequency analysis and neural networks	955
Full scale test of a PC bridge to calibrate assessment methods	965
Investigating the effects of climate change on structural resistance and actions	974
Fatigue assessment of a steel truss bridge based on multi-dimensional finite element modelling	986
Non-destructive and effective bridge monitoring through fast-falling weight deflectometer	995
Study on after-slip strength of high-strength bolted frictional joints with a filler plate	1005
Bridge management systems: overview and framework for smart management	1014
Longitudinal response of a cable-stayed bridge to wind loads using fluid-structure interaction simulations	1023
Standardised bridge weigh-in-motion data and its applications in bridge engineering	1031
Traffic loads for the assessment of existing bridges	1040
Structural robustness as an extended status indicator in bridge maintenance management systems	1049
Anchorage/lap strength of bars in RC structures in case of low concrete cover thickness	1057
A methodology for resiliency assessment of existing bridges – a study on a bridge from 1930	1066
Parametric approach in BIM environment for the assessment of existing masonry buildings	1074
An interdisciplinary approach to landslide damage assessment in urban areas	1083
Updating of the corrosion degree based on visual data combined with strain or modal data	1092
<b>Innovative structures</b>	<b>1102</b>
Multidimensional load-bearing behaviour of timber-concrete-composite road bridges with consideration of flexibility of connections	1103
Concepts for walkable coverings of historic site	1110
Butt welded connections of high strength steel	1118
Early-age cracking behavior of advanced reinforced concrete pavement under environmental loading	1126
Timber-granite-composite structures for pedestrian and cycle path bridges	1135
The hyperion tower, an audacious demonstration of the use of materials	1144
Innovative TBM traffic tunnels	1153
Investigations on the structural behaviour of CFRP reinforced concrete members for modular bridge constructions	1163
Reliability, sustainability and innovation in bridges and structures	1172
The Enshi funicular	1181
Footbridge Nelson Mandela in Béziers: a contemporary slender arch bridge in UHPFRC	1189
A deployable tensegrity footbridge: static design and optimization	1196
The Samuel De Champlain Bridge – A holistic approach to sustainability and durability	1205
New concept of high voltage overhead line between Avelin and Gavrelle – structural and dynamic design	1215
Design, simulation and matched structure of a living ecological & energized modules (EEMs) bridge system	1224

<b>Case studies</b>	<b>1232</b>
Interaction of normal and shear loads in carbon reinforced slab segments	1233
Real condition experiment on a new bridge weigh-in-motion solution for the traffic assessment on road bridges	1242
Design of Jakarta Mass Rapid Transit package CP103	1249
Gaining a realistic fatigue load model using sensor-based measurements	1258
Numerical calibration of railway bridge based on measurement data	1264
Equivalent nosing force for a steel railway bridge based on in situ measurements	1273
Timber and concrete hybrid superstructures – a potential step towards sustainability?	1280
Fixed link crossings: a global perspective	1288
Combined solution: the structures of the A120 Little Hadham bypass and flood alleviation scheme	1296
Verification calculation of the Cortenoeverse bridge using finite element analysis	1304
Challenges when enhancing the infrastructure – case studies	1313
Using movable modular grandstands in large sports stadia	1323
Construction in Antarctica and South Georgia: delicate works in a pristine environment	1330
Permanent glass-fibre-reinforced under water concrete floor	1339
<b>Exceptional loads on structures</b>	<b>1347</b>
Accidental impact by ships in the updated EN 1991-1-7	1348
<b>Structural behaviour under fire conditions</b>	<b>1356</b>
Fire behaviour of large scale loaded tunnel segment tests for project Rotterdamsebaan, The Netherlands	1357
<b>Design for earthquakes</b>	<b>1365</b>
Classification of earthquake-induced building damage using innovative methods	1366
Simplified approach for the seismic analysis of precast girder bridges with gap	1375
Time history analysis of an existing structure in accordance with Turkish and European standards	1383
Effect on buckling behavior and seismic performance of steel piers corrosion-damaged near ground	1392
Ground motion spatial variability and cable-stayed bridges: do we need to consider the asynchronous motion?	1398
Investigation on the reasonable area of energy-dissipation bars for hybrid rocking columns	1407
Investigation of hybrid multi-core buckling-restrained brace components	1415
Variations in seismic retrofit design of cable-stayed bridges of different sizes	1422
Evaluation of a low-cost seismic energy dissipation device for buildings	1430
Repair project of a vehicular bridge damaged during the 2017 Puebla-Morelos earthquake: seismic evaluation	1437
Influence of Mullins and hardening effects of seismic isolation rubber bearings on the seismic response	1444
<b>Soil-structure Interaction</b>	<b>1453</b>
Numerical analyses on mechanical performance of flat buried approach slab and soil deformation	1454
Finite element analyses of a buckling-restrained pile	1462
WTF design software	1471
<b>Fatigue and fracture</b>	<b>1478</b>
Fatigue strength of large diameters tension rods with metric cut thread	1479
Evaluation of the contact area of lorry tyres in Eurocode's fatigue load model 4 (FLM4)	1488
Refurbishment of orthotropic steel decks with steel plates	1496
Development of ductile cast-iron bridge slabs for onsite replacement	1504
Ultimate strength and fatigue life of cable-stayed bridges considering cable corrosion	1511
Highway bridge deck made of ductile-cast-iron	1519
Numerical analysis of the fatigue behaviour of friction stir welded joints in aluminum bridge decks	1528
Improving economic efficiency of wind energy using data-based fatigue assessment methods	1537
Influence of inspection on the safety of fatigue loaded welded cruciform steel joints – comparison of simplified and advanced crack growth models	1546
Fatigue behaviour of Vossloh SKL14 tension clamps	1555

<b>Failures and forensic engineering</b>	<b>1564</b>
Contributing human and organizational factors to the collapse of the FC Twente stadium roof	1565
Evaluation, repair & rehabilitation of 2 flyovers using advance assessment methods – a case study	1572
Effect of loading rate, surface flaw length and orientation on strength of laser-modified architectural glass	1581
<b>Dynamics of structures</b>	<b>1589</b>
Vibration serviceability performance of prefabricated cross-laminated timber steel rib composite floors	1590
Vibration of structurally connected high-rise buildings under wind force	1598
Long-term extreme buffeting response of long-span bridges considering uncertain turbulence parameters	1606
FEM based approach for development of a new high-speed load-model for railway bridges	1614
Dynamic behavior of aluminum deck-on-steel girder bridges under vehicular traffic loads considering the effect of road roughness	1623
Railway bridge dynamics: development of a new high-speed train load model for dynamic analyses of train crossing	1633
Numerical modeling strategy for deteriorated concrete decks in SHM applications	1643
An experimental study of cable tension identification based on measurements of mode shapes	1651
The Arc Majeur, when art challenges technology	1658
Dynamic response under pedestrian loading of the footbridge “La Belle Liégeoise”	1667
Wind response sensitivities of a long suspension bridge	1675
<b>Strengthening and retrofitting</b>	<b>1683</b>
Exploration of novel faying surface treatment for high-strength frictional bolted joints to enhance its after-slip performance	1684
Strengthening of box girder bridges with external prestressing - case study for the Langeland Bridge.	1692
Testing of composite girders with coiled spring pin shear connectors	1700
Monitoring of a Norwegian steel-concrete bridge strengthening for composite action	1709
Strengthening old steel railway bridges: a review	1718
Performance assessment on influence zone of existing structures for metro construction	1728
Conservation of historical buildings – concepts and details	1738
Advancements in shear strengthening of prestressed concrete I-girders using fiber reinforced polymers	1746
A method for replacing lower flange splice plate of a steel I-girder connection using BPL	1754
Condition assessment, rehabilitation and upgradation of stadia in Delhi using modern technology	1761
Numerical study on rehabilitation of the U-rib butt weld fatigue crack in orthotropic steel deck using carbon fiber reinforced polymer strip	1771
<b>Safety, reliability and risk</b>	<b>1778</b>
Risk management and criticality ranking of civil infrastructures – case study	1779
Structural reliability of RC frames under sudden column removal scenarios considering static and dynamic methods	1789
Fire performance of reinforced concrete slabs: a numerical analysis	1797
Accounting for spatial variability in partial factor based design verifications	1805
Response surface method strategies coupled with NLFEA for structural reliability analysis of prestressed bridges	1813
Eurocode structural fire design of Brazilian masonry buildings	1823
Enhancement of structural safety by safety factors – a case against the common approach	1831
Reliability-based structural assessment of a historical steel railway bridge	1839
Impact evaluation of human-made hazards on terrestrial transport infrastructure assets: modelling variables and failure modes	1847
<b>All structural materials</b>	<b>1854</b>
Assessment of the aftertreatment quality of concrete	1855
Climatic advantages of the spread of timber constructions in peripheral regions - the case of southern Switzerland	1863

Investigation of the load-bearing behavior of composite joints in cross-section supplements for concrete structures	1872
Slussen – the lock of Stockholm	1882
Engineering of a contemporary version of the stone arches of the “Pont des Trous” in Tournai	1891
<b>High-rise buildings</b>	<b>1900</b>
Numerical study on multi-cell CFT column under lateral force in different direction	1901
Silver Tower Brussels – Adaptative outriggers	1909
Automation of seismic design of high-rise structure with braced steel frame	1917
Bi-direction evolutionary structural optimization in seismic design of braced steel frame tall buildings	1924
Sensitivity data driven optimal design for steel frame tall buildings	1931
High-rise building analysis considering construction stages: floor structure stiffness influence over vertical element axial shortening	1941
<b>Parametric design</b>	<b>1948</b>
Automated framework for optimized path-planning for pile foundation drilling machines based on 4D BIM modelling	1949
Optioneering of long viaducts via parametric design	1957
Automated design of high voltage pylons	1965
<b>Large span structures</b>	<b>1973</b>
Trysfjord bridge, parametric analysis and modelling for drawingless construction of a concrete balanced cantilever bridge	1999
Investigations on the buckling behaviour due to different launching bearings	1974
Super-long span bridge aerodynamics benchmark: additional results for TG3.1 Step 1.2	1982
Design of the A1-M1 link road extradosed bridge in Mauritius	1990
Indicative implied safety level in ULS of a suspension bridge deck	2005
<b>Architecture of structures</b>	<b>2015</b>
A low-carbon, funicular concrete floor system: design and engineering of the HiLo floors	2016
Lannion downstream bridge over the Léguer River	2025
ViA15 - A paradigm switch for bridge design	2035
<b>Light-weight structures</b>	<b>2043</b>
Numerical study of a blind bolted connection between an aluminum bridge deck and steel girders	2044
Design, construction and structural response of a lightweight FRP footbridge	2053
<b>IABSE Reports</b>	
<b>Author index</b>
