Volume 11855

Proceedings of SPIE 0277-786X, V. 11855

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIEDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:
Author(s), "Title of Paper," in *Photomask Technology 2021*, edited by Stephen P. Renwick, Proc. of SPIE 11855, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B … 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

# Contents

MASK INSPECTION/METROLOGY I

11855 02 Contacts and lines SEM image metrology with SMILE [11855-19]

11855 03 3D-MC modelling of particle contamination induced defects in ebeam mask writing [11855-22]

MASK INSPECTION/METROLOGY II

11855 04 High-precision and cost-effective EUV reticle defect registration with integrated grid matching using KLA LMS IPRO and FlashScan [11855-23]

11855 06 Resolution limit and photon flux dependency in EUV ptychography [11855-31]

EMERGING TECHNOLOGY, NIL, ETC.

11855 08 Subpixel pattern edge placement controllability of digital scanner [11855-14]

11855 09 Nanoimprint lithography methods for achieving sub-3nm overlay [11855-38]

MASK INSPECTION/METROLOGY III

11855 0A Study for big data interrelation using real-time monitoring technology in high cost, high volume manufacturing EUV era [11855-3]

11855 0B Lithography printability review: the ultimate step in reticle analyzer to avoid killer mask defects in wafer fab manufacturing [11855-16]

11855 0E Characterization of mask CD mean-to-target for hotspot patterns by using SEM image contours [11855-33]

MASK RESISTS AND MATERIALS I

11855 0G EMA modelled alternative EUV absorber materials considering optical and stability behavior [11855-7]

11855 0H An EUV photomask cleaning solution for the removal of tin contaminate [11855-40]

11855 0I The semiconductor world of the 2020s according to photomasks: how semiconductor growth depends upon solving photomask market challenges [11855-25]

DL/ML

11855 0K Lithography tool improvement at productivity and performance with data analysis and machine learning (Invited Paper) [11855-1]

11855 0L Litho-aware redundant local-loop insertion framework with convolutional neural network (Invited Paper) [11855-34]

11855 0M Uncertainty quantification of machine learning models: on conformal prediction (Invited Paper) [11855-11]

MASK RESISTS AND MATERIALS II

11855 0O Precision phase angle control with transmissive etching stop film [11855-12]

11855 0P Optimal phase shift and reflectance for high numerical aperture EUV phase shift mask [11855-41]

CURVILINEAR MASKS

11855 0Q Using curvature-based pre-bias to reduce number of iterations in curvilinear mask process correction [11855-24]

11855 0S Rapid full-chip curvilinear OPC for advanced logic and memory [11855-35]

11855 0V Benefits of an integrated pipelined flow for curvilinear MPC and multibeam fracture [11855-30]

MASK WRITING, ARCHITECTURE, AND OPTIMIZATION I

11855 0X Study on modeling of resist surface charge effect on mask blanks with charge dissipation layer in electron beam mask writers [11855-8]

11855 0Y Acceleration method for source mask optimization at 7nm technology node [11855-13]

11855 0Z Sensitivity analysis based SEM measurement down-sampling approach for mask process modeling applications [11855-20]

MASK WRITING, ARCHITECTURE, AND OPTIMIZATION II

11855 11 A new generation cost-efficient laser mask writer, addressable up to the 90nm node [11855-21]

11855 12 File formats for curvilinear multi-beam writing of 193i and EUV masks [11855-46]
