Volume 11860

Proceedings of SPIE 0277-786X, V. 11860

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Environmental Effects on Light Propagation and Adaptive Systems IV*, edited by Karin Stein, Szymon Gladysz, Proc. of SPIE 11860, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

ATMOSPHERIC TURBULENCE CHARACTERIZATION I

- 11860 04 **Urban characteristics of the Monin-Obukhov similarity theory in the surface anisotropic layer of the atmosphere** [11860-2]
- 11860 05 **C-DIMM: an autonomous, outdoor and fixed seeing monitor for astronomy, atmospheric studies and free space optical communications** [11860-3]

ATMOSPHERIC TURBULENCE CHARACTERIZATION II

- 11860 07 **Investigation of the atmosphere above the sea regarding laser performance** [11860-6]
- 11860 08 **Investigation of vertical profiles of optical turbulence from mesoscale simulations runs and radiosonde data** [11860-7]

LASER BEAM PROPAGATION AND FREE-SPACE OPTICAL COMMUNICATIONS

- 11860 09 **Propagation of laser beams carrying orbital angular momentum through simulated optical turbulence in Rayleigh-Bénard convection (Invited Paper)** [11860-8]
- 11860 0A **Demonstration of GBit/s coherent free-space optical communications over an 800 m outdoor path** [11860-9]
- 11860 0C **Neural network classification of structured light in optical turbulence** [11860-11]
- 11860 0D **Distortions of the non-paraxial Gaussian beam propagating through inhomogeneous atmosphere** [11860-12]

ADAPTIVE OPTICS

- 11860 0E **Hybrid adaptive optical system correcting turbulent distortions on the long atmospheric paths** [11860-13]
- 11860 0G **Simulation of an optimized holographic wavefront sensor for realistic turbulence scenarios** [11860-15]
- 11860 0H **Direct multiplexing of low order aberration modes in a photopolymer-based holographic element for analog holographic wavefront sensing** [11860-16]

11860 01 **Dynamic interferometric wavefront sensor for strong turbulence conditions based on polarization imaging sensor [11860-17]**
