Volume 11920

Proceedings of SPIE-OSA Biomedical Optics, 1605-7422, V. 11920

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIEDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:
Author(s), "Title of Paper," in *Diffuse Optical Spectroscopy and Imaging VIII*, edited by Davide Contini, Yoko Hoshi, Thomas D. O'Sullivan, Proc. of SPIE-OSA 11920, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B … 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

ADVANCES IN INSTRUMENTATION AND TECHNOLOGY I

11920 02 **In-vivo time-domain diffuse correlation spectroscopy with a superconducting nanowire single-photon detector** [11920-1]

11920 03 **SOLUS: a novel multimodal approach to ultrasound and diffuse optics imaging of breast cancer** [11920-2]

11920 04 **Fast-gated digital silicon photomultiplier maximizes light harvesting and depth sensitivity in time-domain diffuse optics** [11920-3]

11920 05 **Silicon photomultiplier-based detection module with up to 1 cm^2 area to push time-domain diffuse optics performances** [11920-4]

11920 06 **Time-domain diffuse optics beyond pile-up limits: a simulation study based on relevant figures of merit** [11920-5]

11920 07 **A hybrid DCS and TD-NIRS device for monitoring tissue oxygenation and perfusion, towards ICU applications** [11920-6]

11920 08 **New hybrid time-domain device for diffuse correlation spectroscopy and near-infrared spectroscopy for brain hemodynamic assessment** [11920-7]

ADVANCES IN INSTRUMENTATION AND TECHNOLOGY II

11920 09 **Beyond oxygen in-vivo long-wavelength near infra-red spectroscopy for hypoxia assessment** [11920-8]

11920 0A **High-speed 2D imaging with frequency-domain near-infrared spectroscopy** [11920-9]

11920 0B **Single-pixel spatial frequency domain imaging with integrating detection** [11920-10]

11920 0C **Frequency domain functional near infrared spectroscopy and diffuse tomography improves quantitative accuracy** [11920-11]

11920 0D **Application of a precise integrating sphere method for the determination of in-vitro optical properties of biological samples from domestic pig** [11920-12]

11920 0E **Evaluation of tabulated hemoglobin absorption spectra using collimated transmission on oxygenated human lysed blood** [11920-13]

11920 0F **Hemoglobin spectra and employed wavelengths affect estimation of concentration and oxygen saturation: blood-lipid phantom study** [11920-14]

CEREBRAL HEMODYNAMICS AND NEURAL ACTIVITY

11920 0G **Discrimination between healthy and glaucomatous subjects with TD-fNIRS** [11920-15]

11920 0H **Hypoxia leads to decrease in hemodynamic responses of visual cortex** [11920-16]

11920 0I **An optical biomarker of hypoxic-ischaemic injury severity in the neonatal brain** [11920-17]

11920 0J **Does wearing a non-medical face mask cause changes in cerebral hemodynamics?** [11920-18]

11920 0K **Brain activations during programming tasks: TD-NIRS and EEG study** [11920-19]

11920 0L **Subject specific atlas-based frequency domain diffuse optical tomography** [11920-20]

11920 0M **Intraoperative statistical parametric brain mapping using RGB imaging** [11920-21]

CLINICAL AND PRECLINICAL APPLICATIONS OF DIFFUSE OPTICS

11920 0N **Diffuse optical spectroscopic imaging of the human lactating breast** [11920-22]

11920 0O **Optical mammography in the time domain up to 1060 nm: from tests on healthy women to initial data for monitoring neoadjuvant chemotherapy** [11920-23]

11920 0P **Potential for improved thyroid cancer screening aided by multi-modal clinical ultrasound and hybrid diffuse optics (LUCA platform)** [11920-24]

11920 0Q **Intracranial pressure driven cardiac pulsation waveform changes measured with diffuse correlation spectroscopy** [11920-25]

11920 0R **Performance assessment of commercial continuous-wave near-infrared spectroscopy devices for the international HEMOCOVID-19 clinical trial** [11920-26]

11920 0S **Cerebral time domain near-infrared spectroscopy of people with multiple sclerosis: a feasibility study** [11920-27]

11920 0T **Adipose tissue thickness and optical properties affect differential pathlength factor in NIRS studies on human skeletal muscle** [11920-28]

THEORY, ALGORITHMS, AND COMPUTATIONAL TOOLS I

11920 0U **Optimum selection of individual-level neonatal models in place of subject-specific priors for infant diffuse optical tomography** [11920-29]

11920 0V **Dual-slope broadband diffuse reflectance spectrometer for absolute absorption spectra of turbid media** [11920-30]

11920 0W **Application of numerical methods for heterogenic spatial frequency domain imaging simulations** [11920-31]

11920 0X **Determination of optical properties from spatially resolved diffuse reflectance using relative and absolute data** [11920-32]

11920 0Y **Real-time, wide-field endoscopic quantitative imaging based on 3D profile corrected deep-learning SSOP** [11920-33]

11920 0Z **Fourier transform provides computational advantages for time-domain diffuse optical tomography** [11920-34]

11920 10 **Optimal spectral combination of a hyperspectral camera for intraoperative hemodynamic and metabolic brain mapping** [11920-35]

THEORY, ALGORITHMS, AND COMPUTATIONAL TOOLS II

11920 11 **Sensitivity of TD-NIRS in estimating neonatal cerebral hemodynamics with homogenous models of analysis** [11920-36]

11920 12 **pyxopto: an open-source Python library with utilities for fast light propagation modeling in turbid media** [11920-37]

11920 13 **Self-calibrated pulse oximetry based on absorption changes in photon pathlength** [11920-38]

11920 14 **Investigation of effect of modulation frequency on high-density diffuse optical tomography image quality** [11920-39]

11920 15 **Reconstruction of absorption maps by digital tomosynthesis** [11920-40]

11920 16 **Simultaneous diffuse optical and bioluminescence tomography to improve source localization** [11920-41]

11920 17 **A comprehensive method for simulating the effects of detector noise on speckle contrast signal** [11920-42]

WEARABLE AND PORTABLE DIFFUSE OPTICS INSTRUMENTATION AND APPLICATIONS

11920 18 **Motor cortex hemodynamic response function in freely moving subjects recorded via time domain fNIRS** [11920-43]

11920 19 **Evaluating a new generation of wearable high-density diffuse optical tomography (HD-DOT) technology via retinotopic mapping in the adult brain** [11920-44]

11920 1A **ANIMATE: wearable, flexible, and ultra-lightweight high-density diffuse optical tomography technologies for functional neuroimaging of newborns** [11920-45]

11920 1B **Wearable HD-DOT for investigating functional connectivity in the adult brain: a single subject, multi-session study** [11920-46]

11920 1C **Towards cot-side mapping of the sensorimotor cortex in preterm and term infants with wearable high-density diffuse optical tomography** [11920-47]

11920 1D **Application of near-infrared spectroscopy in human elite freedivers while deep diving on a single breath hold** [11920-48]

11920 1E **Functional near-infrared spectroscopy in non-domesticated grey seals** [11920-49]

POSTER SESSION I

11920 1F **Raman spectroscopic analysis of fresh tissue samples from brain tumors** [11920-50]

11920 1G **Monte Carlo photon migration modeling for assessing external jugular venous dynamics** [11920-51]

11920 1H **A comparison between flat and spherical models of the human head for NIR light propagation** [11920-52]

11920 1I **A simple algorithm for diffuse optical tomography (DOT) without matrix inversion** [11920-53]

11920 1J **A smartphone-based 3D printed prototype for polarized fluorescence collection from human cervix** [11920-54]

11920 1K **Exploring different source configurations for laser speckle-based blood flow measurement system** [11920-55]

11920 1L **Multifrequency frequency domain diffuse optical tomography** [11920-56]

11920 1M **3D fluorescence optical tomography with directed sources using the δ-SP_3 approximation** [11920-57]

11920 1N **Assessment of fibrosis in skin models using laser speckle image analysis** [11920-58]

11920 1O **A portable wireless device for monitoring of cell culture growth based on light scattering** [11920-59]

11920 1P **Biochemical analyzer for medical diagnostics based on spectrophotometric principle and programmable light source** [11920-60]

11920 1Q **Phantoms for performance verification and quality control in developing a photonics-based medical device (VASCOVID): a regulatory driven approach** [11920-61]

POSTER SESSION II

11920 1R **Study of spatial distribution of upconversion nanoparticles in sections of rat organs and tumors by the luminescent method** [11920-62]

11920 1S **3D-printed collection channel of Raman probe designed using modular approach** [11920-63]

11920 1T **Low cost spatially resolved diffuse reflectance spectrometry in the SWIR range** [11920-64]

11920 1U **Efficient Monte Carlo simulations of subdiffusive reflectance for spatial frequency domain imaging systems with a low NA** [11920-65]

11920 1V **Comparison of in-vivo measured optical path length distribution of backscattered light in human skin and time-resolved Monte Carlo simulations** [11920-66]

11920 1W **Lateral resolution and imaging depth of shifted position-diffuse reflectance imaging** [11920-67]

11920 1X **Potential of the Beer–Lambert law for skin chromophore mapping from diffuse reflectance images** [11920-68]

11920 1Y **Tissue chromophore concentration estimation aided by artificial neural network trained with finite element modelled diffuse reflectance spectrum** [11920-69]

11920 1Z **Anomaly detection inside diffuse media using deep learning algorithm** [11920-70]

11920 20 **Filament 3D printing technology for diffuse optics applications: advantages and drawbacks** [11920-71]

POSTER SESSION III

11920 21 **Interference amplification method for registration of intracerebral hemodynamic changes** [11920-72]

11920 22 **Comparison of synthetic exposure and sequential exposure for multiple exposure speckle imaging of blood flow** [11920-73]

11920 23 **Medical images reconstruction using computer generated holography and spatial light modulation** [11920-74]

11920 24 **Laser speckle imaging reveals bacterial activity within colony** [11920-75]

11920 25 **Label-free SERS/machine learning procedures for protein classification** [11920-76]
