2021 IEEE 62nd Annual Symposium on Foundations of Computer Science (FOCS) **FOCS 2021**

Table of Contents

FOCS 2021 Preface	xvii
FOCS 2021 Organizing Committee and Sponsors	xviii
FOCS 2021 Program Committee	xix
Subreviewers	xx
FOCS 2021 Awards	xxvi

Session 1A

A Better-than-2 Approximation for Weighted Tree Augmentation	1
<i>Vera Traub (ETH Zurich, Switzerland) and Rico Zenklusen (ETH Zurich, Switzerland)</i>	
Integer Programs with Bounded Subdeterminants and Two Nonzeros Per Row	13
<i>Samuel Fiorini (Université libre de Bruxelles, Belgium), Gwenael Joret (Université libre de Bruxelles, Belgium), Stefan Weltge (Technical University of Munich, Germany), and Yelena Yuditsky (Université libre de Bruxelles, Belgium)</i>	
A Constant-Factor Approximation Algorithm for Nash Social Welfare with Submodular Valuations	25
<i>Wenzheng Li (Stanford University, USA) and Jan Vondrak (Stanford University, USA)</i>	
A Polynomial Lower Bound on the Number of Rounds for Parallel Submodular Function Minimization	37
<i>Deeparnab Chakrabarty (Dartmouth College), Yu Chen (University of Pennsylvania), and Sanjeev Khanna (University of Pennsylvania)</i>	

Session 1B

Post-Quantum Succinct Arguments: Breaking the Quantum Rewinding Barrier	49
<i>Alessandro Chiesa (EPFL & UC Berkeley, Switzerland), Fermi Ma (UC Berkeley & Simons Institute), Nicholas Spooner (Boston University), and Mark Zhandry (Princeton & NTT Research)</i>	
On the Impossibility of Post-Quantum Black-Box Zero-Knowledge in Constant Round	59
<i>Nai-Hui Chia (Indiana University Bloomington, USA), Kai-Min Chung (Academia Sinica, Taiwan), Qipeng Liu (Simons Institute for the Theory of Computing, USA), and Takashi Yamakawa (NTT Corporation, Japan)</i>	

SNARGs for P from LWE	68
<i>Arka Rai Choudhuri (Johns Hopkins University, USA), Abhishek Jain (Johns Hopkins University, USA), and Zhengzhong Jin (Johns Hopkins University, USA)</i>	
Fine-Grained Cryptanalysis: Tight Conditional Bounds for Dense k-SUM and k-XOR	80
<i>Itai Dinur (Ben-Gurion University), Nathan Keller (Bar-Ilan University), and Ohad Klein (Bar-Ilan University)</i>	

Session 1C

Demystifying the Border of Depth-3 Algebraic Circuits	92
<i>Pranjal Dutta (Chennai Mathematical Institute, India), Prateek Dwivedi (Indian Institute of Technology Kanpur, India), and Nitin Saxena (Indian Institute of Technology Kanpur, India)</i>	
Fooling Constant-Depth Threshold Circuits	104
<i>Pooya Hatami (The Ohio State University, USA), William Hoza (UC Berkeley, USA), Avishay Tal (UC Berkeley, USA), and Roei Tell (MIT, USA)</i>	
Unambiguous DNFs and Alon–Saks–Seymour	116
<i>Kaspars Balodis (University of Latvia, Latvia), Shalev Ben-David (University of Waterloo, Canada), Mika Göös (EPFL, Switzerland), Siddhartha Jain (EPFL, Switzerland), and Robin Kothari (Microsoft Quantum, USA)</i>	
Hardness vs Randomness, Revised: Uniform, Non-Black-Box, and Instance-Wise	125
<i>Lijie Chen (Massachusetts Institute of Technology) and Roei Tell (Massachusetts Institute of Technology)</i>	

Session 2A

Rapid Mixing of Glauber Dynamics via Spectral Independence for all Degrees	137
<i>Xiaoyu Chen (Nanjing University, China), Weiming Feng (University of Edinburgh, China; University of Edinburgh, United Kingdom), Yitong Yin (Nanjing University, China), and Xinyuan Zhang (Nanjing University, China)</i>	
Spectral Independence via Stability and Applications to Holant-Type Problems	149
<i>Zongchen Chen (MIT, USA), Kuikui Liu (University of Washington, USA), and Eric Vigoda (UC Santa Barbara, USA)</i>	
A Matrix Trickle-Down Theorem on Simplicial Complexes and Applications to Sampling Colorings	161
<i>Dorna Abdolazimi (University of Washington, USA), Kuikui Liu (University of Washington, USA), and Shayan Oveis Gharan (University of Washington, USA)</i>	
Towards the Sampling Lovász Local Lemma	173
<i>Vishesh Jain (Stanford University, USA), Huy Pham (Stanford University, USA), and Thuy-Duong Vuong (Stanford University, USA)</i>	

Session 2B

A Single-Exponential Time 2-Approximation Algorithm for Treewidth	184
<i>Tuukka Korhonen (University of Helsinki, Finland; University of Bergen, Norway)</i>	
Parameterized Problems Complete for Nondeterministic FPT Time and Logarithmic Space	193
<i>Hans L. Bodlaender (Utrecht University, The Netherlands), Carla Groenland (Utrecht University, The Netherlands), Jesper Nederlof (Utrecht University, The Netherlands), and Céline M. F. Swennenhuis (Eindhoven University of Technology, The Netherlands)</i>	
PPSZ is Better than you Think	205
<i>Dominik Scheder (Shanghai Jiao Tong University, China)</i>	
At Most 3.55^n Stable Matchings	217
<i>Cory Palmer (University of Montana, USA) and Dömötör Pálvölgyi (Eötvös Loránd University, Hungary)</i>	

Session 2C

An Invariance Principle for the Multi-slice, with Applications	228
<i>Mark Braverman (Princeton University, USA), Subhash Khot (New York University, USA), Noam Lifshitz (The Hebrew University of Jerusalem, Israel), and Dor Minzer (MIT, USA)</i>	
Applications of Random Algebraic Constructions to Hardness of Approximation	237
<i>Boris Bukh (Carnegie Mellon University, USA), Karthik C. S. (Rutgers University, USA), and Bhargav Narayanan (Rutgers University, USA)</i>	
Almost Optimal Inapproximability of Multidimensional Packing Problems	245
<i>Sai Sandeep (Carnegie Mellon University)</i>	

Session 3A

Random Walks and Forbidden Minors III: $\text{poly}(d\epsilon^{-1})$ -time Partition Oracles for Minor-free Graph Classes	257
<i>Akash Kumar (EPFL), C. Seshadhri (University of California Santa Cruz, USA), and Andrew Stolman (University of California Santa Cruz, USA)</i>	
Non-adaptive vs Adaptive Queries in the Dense Graph Testing Model	269
<i>Oded Goldreich (Weizmann Institute of Science, Israel) and Avi Wigderson (Institute for Advanced Study, USA)</i>	
Exact and Approximate Pattern Counting in Degenerate Graphs: New Algorithms, Hardness Results, and Complexity Dichotomies	276
<i>Marco Bressan (University of Milan, Italy) and Marc Roth (University of Oxford, United Kingdom)</i>	
Testability of Relations Between Permutations	286
<i>Oren Becker (University of Cambridge, United Kingdom), Alexander Lubotzky (The Hebrew University, Israel), and Jonathan Mosheiff (Carnegie Mellon University, USA)</i>	

Session 3B

The Algorithmic Phase Transition of Random k -SAT for Low Degree Polynomials	298
<i>Guy Bresler (Massachusetts Institute of Technology, USA) and Brice Huang (Massachusetts Institute of Technology, USA)</i>	
One-step Replica Symmetry Breaking of Random Regular NAE-SAT	310
<i>Danny Nam (Princeton University), Allan Sly (Princeton University), and Youngtak Sohn (Stanford University)</i>	
Sharp Thresholds in Random Simple Temporal Graphs	319
<i>Arnaud Casteigts (University of Bordeaux, France), Michael Raskin (Technical University of Munich, Germany), Malte Renken (Technical University of Berlin, Germany), and Viktor Zamaraev (University of Liverpool, United Kingdom)</i>	
Proof of the Contiguity Conjecture and Lognormal Limit for the Symmetric Perceptron	327
<i>Emmanuel Abbe (EPFL, Switzerland), Shuangping Li (Princeton University, USA), and Allan Sly (Princeton University, USA)</i>	

Session 3C

Approximating Maximum Independent Set for Rectangles in the Plane	339
<i>Joseph S. B. Mitchell (Stony Brook University, USA)</i>	
A Gap-ETH-Tight Approximation Scheme for Euclidean TSP	351
<i>Sándor Kisfaludi-Bak (Institute for Theoretical Studies, ETH Zürich, Switzerland), Jesper Nederlof (Utrecht University, Utrecht, The Netherlands), and Karol Wegrzycki (Saarland University and Max Planck Institute for Informatics, Germany)</i>	
Optimal Approximate Distance Oracle for Planar Graphs	363
<i>Hung Le (University in Amherst Massachusetts, USA) and Christian Wulff-Nilsen (University of Copenhagen, Denmark)</i>	
Covering Polygons is Even Harder	375
<i>Mikkel Abrahamsen (University of Copenhagen)</i>	

Session 4A

Robust Recovery for Stochastic Block Models	387
<i>Jingqiu Ding (ETH Zurich, Switzerland), Tommaso D'Orsi (ETH Zurich, Switzerland), Rajai Nasser (ETH Zurich, Switzerland), and David Steurer (ETH Zurich, Switzerland)</i>	
On Statistical Inference when Fixed Points of Belief Propagation are Unstable	395
<i>Siqi Liu (UC Berkeley, USA), Sidhanth Mohanty (UC Berkeley, USA), and Prasad Raghavendra (UC Berkeley, USA)</i>	
Sum-of-Squares Lower Bounds for Sparse Independent Set	406
<i>Chris Jones (University of Chicago, USA), Aaron Potechin (University of Chicago, USA), Goutham Rajendran (University of Chicago, USA), Madhur Tulsiani (Toyota Technological Institute, USA), and Jeff Xu (Carnegie Mellon University, USA)</i>	

Chow-Liu++: Optimal Prediction-Centric Learning of Tree Ising Models	417
<i>Enric Boix-Adserà (MIT, USA), Guy Bresler (MIT, USA), and Frederic Koehler (MIT, USA)</i>	

Session 4B

The Minimum Formula Size Problem is (ETH) Hard	427
<i>Rahul Ilango (MIT, USA)</i>	
The Hardest Explicit Construction	433
<i>Oliver Korten (Columbia University, NY)</i>	
Tradeoffs for Small-Depth Frege Proofs	445
<i>Toniann Pitassi (Columbia University, USA; University of Toronto, Canada), Prasanna Ramakrishnan (Stanford University, USA), and Li-Yang Tan (Stanford University, USA)</i>	
Group Isomorphism is Nearly-Linear Time for Most Orders	457
<i>Heiko Dietrich (Monash University, Australia) and James B. Wilson (Colorado State University, USA)</i>	

Session 4C

Fitting Distances by Tree Metrics Minimizing the Total Error Within a Constant Factor	468
<i>Vincent Cohen-Addad (Google Research, Switzerland), Debarati Das (BARC, University of Copenhagen, Denmark), Evangelos Kipouridis (BARC, University of Copenhagen, Denmark), Nikos Parotsidis (Google Research, Switzerland), and Mikkel Thorup (BARC, University of Copenhagen, Denmark)</i>	
Embeddings of Planar Quasimetrics into Directed ℓ_1 and Polylogarithmic Approximation for Directed Sparsest-Cut	480
<i>Ken-Ichi Kawarabayashi (National Institute of Informatics, Japan) and Anastasios Sidiropoulos (University of Illinois at Chicago, USA)</i>	
Hop-Constrained Metric Embeddings and Their Applications	492
<i>Arnold Filtser (Bar-Ilan University, Israel)</i>	
A Hitting Set Relaxation for k-Server and an Extension to Time-Windows	504
<i>Anupam Gupta (Carnegie Mellon University), Amit Kumar (IIT Delhi, India), and Debmalya Panigrahi (Duke University)</i>	

Session 5A

Fully Dynamic Electrical Flows: Sparse Maxflow Faster Than Goldberg-Rao	516
<i>Yu Gao (Georgia Institute of Technology, USA), Yang P. Liu (Stanford University, USA), and Richard Peng (Georgia Tech / University of Waterloo, USA)</i>	
Faster Sparse Minimum Cost Flow by Electrical Flow Localization	528
<i>Kyriakos Axiotis (MIT, USA), Aleksander Mądry (MIT, USA), and Adrian Vladu (CNRS & IRIF, Université de Paris, France)</i>	

2-Norm Flow Diffusion in Near-Linear Time	540
<i>Li Chen (Georgia Tech, USA), Richard Peng (Georgia Tech, USA), and Di Wang (Google Research, USA)</i>	
On the Power of Preconditioning in Sparse Linear Regression	550
<i>Jonathan Adam Kelner (MIT, USA), Frederic Koehler (Stanford University, USA), Raghu Meka (UCLA, USA), and Dhruv Rohatgi (MIT, USA)</i>	

Session 5B

Quantum Learning Algorithms Imply Circuit Lower Bounds	562
<i>Srinivasan Arunachalam (IBM T. J. Watson Research Center, USA), Alex B. Grilo (Sorbonne Université and CNRS, France), Tom Gur (University of Warwick, UK), Igor C. Oliveira (University of Warwick, UK), and Aarthi Sundaram (Microsoft Quantum, USA)</i>	
Exponential Separations Between Learning With and Without Quantum Memory	574
<i>Sitan Chen (UC Berkeley), Jordan Cotler (Harvard University), Hsin-Yuan Huang (Caltech), and Jerry Li (Microsoft Research, Redmond)</i>	
Quantum Soundness of Testing Tensor Codes	586
<i>Zhengfeng Ji (Tsinghua, China), Anand Natarajan (MIT, USA), Thomas Vidick (Caltech, USA), John Wright (UT Austin, USA), and Henry Yuen (Columbia, USA)</i>	
Quasi-Polynomial Time Approximation of Output Probabilities of Geometrically-Local, Shallow Quantum Circuits	598
<i>Nolan J. Coble (University of Maryland) and Matthew Coudron (University of Maryland, National Institute of Standards and Technology)</i>	

Session 5C

Improved Extractors for Small-Space Sources	610
<i>Eshan Chattopadhyay (Cornell University) and Jesse Goodman (Cornell University)</i>	
Affine Extractors for Almost Logarithmic Entropy	622
<i>Eshan Chattopadhyay (Cornell University, USA), Jesse Goodman (Cornell University, USA), and Jyun-Jie Liao (Cornell University, USA)</i>	
Tight Bounds for General Computation in Noisy Broadcast Networks	634
<i>Klim Efremenko (Ben-Gurion University, Israel), Gillat Kol (Princeton University, USA), Dmitry Paramonov (Princeton University, USA), and Raghuvansh R. Saxena (Princeton University, USA)</i>	
Constructive Separations and Their Consequences	646
<i>Lijie Chen (MIT, USA), Ce Jin (MIT, USA), Rahul Santhanam (University of Oxford, UK), and R. Ryan Williams (MIT, USA)</i>	

Session 6A

A Theory of PAC Learnability of Partial Concept Classes	658
<i>Noga Alon (Princeton University), Steve Hanneke (Purdue University), Ron Holzman (Technion), and Shay Moran (Technion)</i>	
Optimal Sub-Gaussian Mean Estimation in R	672
<i>Jasper C.H. Lee (University of Wisconsin-Madison & Brown University) and Paul Valiant (IAS & Purdue University)</i>	
Online and Distribution-Free Robustness: Regression and Contextual Bandits with Huber Contamination	684
<i>Sitan Chen (UC Berkeley), Frederic Koehler (UC Berkeley), Ankur Moitra (MIT), and Morris Yau (MIT)</i>	
Learning Deep ReLU Networks Is Fixed-Parameter Tractable	696
<i>Sitan Chen (UC Berkeley), Adam R. Klivans (UT Austin), and Raghu Meka (UCLA)</i>	

Session 6B

Improved List-Decodability and List-Recoverability of Reed—Solomon Codes via Tree Packings... ..	708
<i>Zeyu Guo (UT Austin), Ray Li (Stanford), Chong Shangguan (Shandong University), Itzhak Tamo (Tel Aviv University), and Mary Wootters (Stanford)</i>	
List-Decodability with Large Radius for Reed-Solomon Codes	720
<i>Asaf Ferber (University of California Irvine, USA), Matthew Kwan (IST Austria, Austria), and Lisa Saueremann (Massachusetts Institute of Technology, USA)</i>	
The Zero-Rate Threshold for Adversarial bit-Deletions is Less than $1/2$	727
<i>Venkatesan Guruswami (Carnegie Mellon University, Pennsylvania), Xiaoyu He (Princeton University, New Jersey), and Ray Li (Stanford University, California)</i>	
Exponential Lower Bounds for Locally Decodable and Correctable Codes for Insertions and Deletions	739
<i>Jeremiah Blocki (Purdue University, USA), Kuan Cheng (Peking University, China), Elena Grigorescu (Purdue University, USA), Xin Li (Johns Hopkins University, USA), Yu Zheng (Johns Hopkins University, USA), and Minshen Zhu (Purdue University, USA)</i>	

Session 6C

On Worst-Case Learning in Relativized Heuristica	751
<i>Shuichi Hirahara (National Institute of Informatics, Japan) and Mikito Nanashima (Tokyo Institute of Technology, Japan)</i>	
Amortized Circuit Complexity, Formal Complexity Measures, and Catalytic Algorithms	759
<i>Robert Robere (McGill University, Canada) and Jeroen Zuiddam (University of Amsterdam, Netherlands)</i>	

LEARN-Uniform Circuit Lower Bounds and Provability in Bounded Arithmetic	770
<i>Marco Carmosino (Boston University, USA), Valentine Kabanets (SFU, Canada), Antonina Kolokolova (MUN, Canada), and Igor C. Oliveira (University of Warwick, UK)</i>	
On Classifying Continuous Constraint Satisfaction Problems	781
<i>Tillmann Miltzow (Utrecht University, The Netherlands) and Reinier F. Schmiermann (Utrecht University, The Netherlands)</i>	

Session 7: Plenary Session

Breaking the Cubic Barrier for (Unweighted) Tree Edit Distance	792
<i>Xiao Mao (Massachusetts Institute of Technology, USA)</i>	
Superpolynomial Lower Bounds Against Low-Depth Algebraic Circuits	804
<i>Nutan Limaye (ITU-Copenhagen), Srikanth Srinivasan (Aarhus University), and Sébastien Tavenas (CNRS, LAMA, Univ. Grenoble Alpes, Univ. Savoie Mont Blanc)</i>	

Session 8A

Combinatorial Contracts	815
<i>Paul Duetting (Google Research, Switzerland), Tomer Ezra (Tel Aviv University, Israel), Michal Feldman (Tel Aviv University, Israel), and Thomas Kesselheim (University of Bonn, Germany)</i>	
FIXP-Membership via Convex Optimization: Games, Cakes, and Markets	827
<i>Aris Filos-Ratsikas (University of Liverpool, UK), Kristoffer Arnsfelt Hansen (Aarhus University, Denmark), Kasper Høgh (Aarhus University, Denmark), and Alexandros Hollender (University of Oxford, UK)</i>	
On the Nisan-Ronen Conjecture	839
<i>George Christodoulou (University of Liverpool, UK), Elias Koutsoupias (University of Oxford, UK), and Annamaria Kovacs (Goethe University, Germany)</i>	
Continuity, Uniqueness and Long-Term Behavior of Nash Flows Over Time	851
<i>Neil Olver (LSE London, United Kingdom), Leon Sering (ETH Zurich, Switzerland), and Laura Vargas Koch (ETH Zurich, Switzerland)</i>	

Session 8B

Fully Dynamic s-t Edge Connectivity in Subpolynomial Time	861
<i>Wenyu Jin (University of Illinois at Chicago, USA) and Xiaorui Sun (University of Illinois at Chicago, USA)</i>	
Time-Optimal Sublinear Algorithms for Matching and Vertex Cover	873
<i>Soheil Behnezhad (Stanford University)</i>	
Small-Space and Streaming Pattern Matching with k Edits	885
<i>Tomasz Kociumaka (University of California, Berkeley, USA), Ely Porat (Bar Ilan University, Israel), and Tatiana Starikovskaya (DI/ENS, PSL Research University, France)</i>	

A Quantum Advantage for a Natural Streaming Problem	897
<i>John Kallaugher (The University of Texas at Austin, USA)</i>	

Session 8C

Statistically Near-Optimal Hypothesis Selection	909
<i>Olivier Bousquet (Google Brain, Switzerland), Mark Braverman (Princeton University, USA), Gillat Kol (Princeton University, USA), Klim Efremenko (Ben Gurion University, Israel), and Shay Moran (Technion and Google Research, Israel)</i>	
Properly Learning Decision Trees in Almost Polynomial Time	920
<i>Guy Blanc (Stanford University, USA), Jane Lange (MIT, USA), Mingda Qiao (Stanford University, USA), and Li-Yang Tan (Stanford University, USA)</i>	
Sharper Bounds on the Fourier Concentration of DNFs	930
<i>Victor Lecomte (Stanford University, USA) and Li-Yang Tan (Stanford University, USA)</i>	

Session 9A

Smoothed Analysis with Adaptive Adversaries	942
<i>Nika Haghtalab (University of California Berkeley, USA), Tim Roughgarden (Columbia University, USA), and Abhishek Shetty (University of California Berkeley, USA)</i>	
Hiding Among the Clones: A Simple and Nearly Optimal Analysis of Privacy Amplification by Shuffling	954
<i>Vitaly Feldman (Apple, USA), Audra McMillan (Apple, USA), and Kunal Talwar (Apple, USA)</i>	
Settling the Horizon-Dependence of Sample Complexity in Reinforcement Learning	965
<i>Yuanzhi Li (Carnegie Mellon University, USA), Ruosong Wang (Carnegie Mellon University, USA), and Lin F. Yang (University of California, Los Angeles, USA)</i>	
Feature Purification: How Adversarial Training Performs Robust Deep Learning	977
<i>Zeyuan Allen-Zhu (Microsoft Research Redmond, USA) and Yuanzhi Li (Carnegie Mellon University, USA)</i>	

Session 9B

Minor Sparsifiers and the Distributed Laplacian Paradigm	989
<i>Sebastian Forster (University of Salzburg, Austria), Gramoz Goranci (University of Glasgow, United Kingdom), Yang P. Liu (Stanford University, USA), Richard Peng (Georgia Tech / University of Waterloo, USA; Waterloo, Canada), Xiaorui Sun (University of Illinois at Chicago, USA), and Mingquan Ye (University of Illinois at Chicago, USA)</i>	

Deterministic Decremental SSSP and Approximate Min-Cost Flow in Almost-Linear Time	1000
<i>Aaron Bernstein (Rutgers University New Brunswick, USA), Maximilian Probst Gutenberg (ETH Zurich, Switzerland), and Thatchaphol Saranurak (University of Michigan, USA)</i>	
Deterministic Distributed Vertex Coloring: Simpler, Faster, and Without Network Decomposition	1009
<i>Mohsen Ghaffari (ETH Zurich, Switzerland) and Fabian Kuhn (University of Freiburg, Germany)</i>	
Hardness of Approximate Diameter: Now for Undirected Graphs	1021
<i>Mina Dalirrooyfard (MIT), Ray Li (Stanford University), and Virginia Vassilevska Williams (MIT)</i>	

Session 9C

MAJORITY-3SAT (and Related Problems) in Polynomial Time	1033
<i>Shyan Akmal (MIT CSAIL & EECS, USA) and Ryan Williams (MIT CSAIL & EECS, USA)</i>	
A Time and Space Optimal Stable Population Protocol Solving Exact Majority	1044
<i>David Doty (University of California, Davis), Mahsa Eftekhari (University of California, Davis), Leszek Gasieniec (University of Liverpool), Eric Severson (University of California, Davis), Przemysław Uznanski (University of Wrocław), and Grzegorz Stachowiak (University of Wrocław)</i>	
Stochastic and Worst-Case Generalized Sorting Revisited	1056
<i>William Kuszmaul (Massachusetts Institute of Technology, USA) and Shyam Narayanan (Massachusetts Institute of Technology, USA)</i>	
Tight Space Complexity of the Coin Problem	1068
<i>Mark Braverman (Princeton University), Sumegha Garg (Harvard University), and Or Zamir (Institute for Advanced Study)</i>	

Session 10A

A Proof of the Erdős–Faber–Lovász Conjecture: Algorithmic Aspects	1080
<i>Dong Yeap Kang (University of Birmingham, United Kingdom), Tom Kelly (University of Birmingham, United Kingdom), Daniela Kühn (University of Birmingham, United Kingdom), Abhishek Methuku (University of Birmingham, United Kingdom), and Deryk Osthus (University of Birmingham, United Kingdom)</i>	
New Data Structure for Univariate Polynomial Approximation and Applications to Root Isolation, Numerical Multipoint Evaluation, and Other Problems	1090
<i>Guillaume Moroz (Université de Lorraine, CNRS, Inria, LORIA)</i>	
The Supersingular Isogeny Path and Endomorphism Ring Problems are Equivalent	1100
<i>Benjamin Wesolowski (Univ. Bordeaux, CNRS, Bordeaux INP, IMB, France)</i>	
Harmonic Persistent Homology	1112
<i>Saugata Basu (Purdue University) and Nathanael Cox (Purdue University)</i>	

Session 10B

A Nearly Optimal All-Pairs Min-Cuts Algorithm in Simple Graphs	1124
<i>Jason Li (Simons Institute), Debmalya Panigrahi (Duke University), and Thatchaphol Saranurak (University of Michigan)</i>	
APMF < APSP? Gomory-Hu Tree for Unweighted Graphs in Almost-Quadratic Time	1135
<i>Amir Abboud (Weizmann Institute of Science, Israel), Robert Krauthgamer (Weizmann Institute of Science, Israel), and Ohad Trabelsi (University of Michigan, USA)</i>	
Minimum Cuts in Directed Graphs via Partial Sparsification	1147
<i>Ruoxu Cen (Duke University, USA), Jason Li (UC Berkeley, USA), Danupon Nanongkai (University of Copenhagen, Denmark), Debmalya Panigrahi (Duke University, USA), Thatchaphol Saranurak (University of Michigan Ann Arbor, USA), and Kent Quanrud (Purdue University, USA)</i>	
Spectral Hypergraph Sparsifiers of Nearly Linear Size	1159
<i>Michael Kapralov (École Polytechnique Fédérale de Lausanne, Switzerland), Robert Krauthgamer (Weizmann Institute of Science, Israel), Jakab Tardos (École Polytechnique Fédérale de Lausanne, Switzerland), and Yuichi Yoshida (National Institute of Informatics, Japan)</i>	

Session 10C

Linear Probing Revisited: Tombstones Mark the Demise of Primary Clustering	1171
<i>Michael A. Bender (Stony Brook University, USA), Bradley C. Kuszmaul (Google Inc., USA), and William Kuszmaul (Massachusetts Institute of Technology, USA)</i>	
Tight Bounds for Adversarially Robust Streams and Sliding Windows via Difference Estimators	1183
<i>David P. Woodruff (Carnegie Mellon University, USA) and Samson Zhou (Carnegie Mellon University, USA)</i>	
Approximability of all Finite CSPs with Linear Sketches	1197
<i>Chi-Ning Chou (Harvard University, USA), Alexander Golovnev (Georgetown University, USA), Madhu Sudan (Harvard University, USA), and Santhoshini Velusamy (Harvard University, USA)</i>	
Terminal Embeddings in Sublinear Time	1209
<i>Yeshwanth Cherapanamjeri (University of California at Berkeley, USA) and Jelani Nelson (University of California at Berkeley, USA)</i>	

Session 11A

Winning the War by (Strategically) Losing Battles: Settling the Complexity of Grundy-Values in Undirected Geography	1217
<i>Kyle W. Burke (Plymouth State University, USA), Matthew T. Ferland (University of Southern California, USA), and Shang-Hua Teng (University of Southern California, USA)</i>	

Reachability in Vector Addition Systems is Ackermann-Complete	1229
<i>Wojciech Czerwiński (University of Warsaw) and Łukasz Orlikowski (University of Warsaw)</i>	
The Reachability Problem for Petri Nets is Not Primitive Recursive	1241
<i>Jérôme Leroux (Univ. Bordeaux, CNRS, Bordeaux INP, LaBRI, France)</i>	

Session 11B

Random Order Online Set Cover is as Easy as Offline	1253
<i>Anupam Gupta (Carnegie Mellon University, USA), Gregory Kehne (Harvard University, USA), and Roie Levin (Carnegie Mellon University, USA)</i>	
Improved Online Correlated Selection	1265
<i>Ruiquan Gao (IIIS, Tsinghua University), Zhongtian He (IIIS, Tsinghua University), Zhiyi Huang (The University of Hong Kong), Zipei Nie (Nine-Chapter Lab, Huawei), Bijun Yuan (The University of Hong Kong), and Yan Zhong (The University of Hong Kong)</i>	
Multiway Online Correlated Selection	1277
<i>Guy Blanc (Stanford University, USA) and Moses Charikar (Stanford University, USA)</i>	

Session 11C

A Direct Product Theorem for Quantum Communication Complexity with Applications to Device-Independent QKD	1285
<i>Rahul Jain (National University of Singapore, Singapore) and Srijita Kundu (National University of Singapore, Singapore)</i>	
Quantum Supremacy and Hardness of Estimating Output Probabilities of Quantum Circuits	1296
<i>Yasuhiro Kondo (Tokyo Institute of Technology, Japan), Ryuhei Mori (Tokyo Institute of Technology, Japan), and Ramis Movassagh (IBM Quantum, MIT-IBM AI Watson lab, USA)</i>	
Noise and the Frontier of Quantum Supremacy	1308
<i>Adam Bouland (UC Berkeley, USA), Bill Fefferman (University of Chicago, USA), Zeph Landau (UC Berkeley, USA), and Yunchao Liu (UC Berkeley, USA)</i>	

Author Index
