Volume 11953

Proceedings of SPIE, 1605-7422, V. 11953

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Optical Fibers and Sensors for Medical Diagnostics, Treatment and Environmental Applications XXII*, edited by Israel Gannot, Katy Roodenko, Proc. of SPIE 11953, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v *Conference Committee*

OPTICAL FIBERS AND SENSORS I

- 11953 02 **Cellulose optical fiber for sensing applications** [11953-2]
- 11953 03 **Transmission properties of 700- μm -bore hollow optical fibers based on flexible Ni-Ti tube**
[11953-6]

OPTICAL FIBERS AND SENSORS II

- 11953 04 **Real-time quantification of CD63 with anti-CD63 functionalized plasmonic fiber optic probe**
[11953-10]

OPTICAL FIBERS AND SENSORS III

- 11953 05 **D-SPR optical fiber plasmonic biosensor for protein detection** [11953-13]
- 11953 06 **High sensitivity D-shaped photonic crystal fiber plasmonic refractive index sensor** [11953-15]

OPTICAL FIBERS AND SENSORS IV

- 11953 07 **Automated OCT A-line abdominal tissue classification using a hybrid MLP-CNN classifier during ventral hernia repair** [11953-16]
- 11953 08 **Downward viewing common-path optical coherence tomography guided hydro-dissection needle for DALK** [11953-17]
- 11953 09 **Optical fiber probe for optical coherence tomography with extended depth of field using a modified GRIN fiber lens** [11953-18]

OPTICAL FIBERS AND SENSORS VI

- 11953 0A **Infrared spectroscopy in analysis of wastewater and in bioreactor applications: from FTIR to quantum cascade lasers (QCLs)** [11953-31]

- 11953 0B **IR microfluidics for in situ sensing of molecular interfaces (Invited Paper)** [11953-33]
- 11953 0C **Selective detection of metal cations using hydrogel-core microstructured polymer optical fibers by fiber enhanced Raman spectroscopy** [11953-34]

OPTICAL FIBERS AND SENSORS V

- 11953 0D **Depth-resolved backscattering signal reconstruction based OCT attenuation compensation** [11953-24]
- 11953 0E **Optical frequency comb generation using a microtoroid resonator in an aqueous environment** [11953-35]
- 11953 0F **Transferring ultra-thin metallic metasurfaces to fibre endoscope probes for advanced imaging** [11953-25]
- 11953 0G **Lithographically patterned fiber bundles for in-vivo Raman spectroscopy** [11953-36]

OPTICAL FIBERS AND SENSORS VIII

- 11953 0H **Optical fiber sensors for detecting spraying drift in drone agricultural applications** [11953-38]
- 11953 0I **AgriTech imaging of underground plant root growth using a distributed fiber optic sensor** [11953-39]

POSTER SESSION

- 11953 0J **Multichannel detector system for surface plasmon resonance biosensors** [11953-48]
- 11953 0K **Ta₂O₅ coated PCF based tunable plasmonic sensor for sensitivity enhancement and wide range RI detection** [11953-49]
- 11953 0L **Development of a portable, non-contact diffuse reflectance system for tissue spectroscopy** [11953-52]
