SPIE

**Volume  
12010**

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at [SPIDigitalLibrary.org](http://SPIDigitalLibrary.org).

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Photonic and Phononic Properties of Engineered Nanostructures XII*, edited by Ali Adibi, Shawn-Yu Lin, Axel Scherer, Proc. of SPIE 12010, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

---

**Paper Numbering:** A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

# Contents

v *Conference Committee*

---

## MODELING AND SIMULATION OF NANOPHOTONIC STRUCTURES

---

12010 02 **Resonance properties of isolated-particle optical lattices: Antireflection-quenched Mie scattering and Mie modal memory** [12010-5]

---

## PHOTONIC CRYSTAL STRUCTURES

---

12010 04 **Wide-band self-collimation in low refractive index hexagonal lattice** [12010-24]

---

## NANOPHOTONIC DESIGN APPROACHES BASED ON ARTIFICIAL INTELLIGENCE

---

12010 05 **A learning-based approach for metasurface design beyond the unit-cell approximation (Invited Paper)** [12010-39]

---

## NOVEL MATERIALS AND PHENOMENA IN ENGINEERED NANOSTRUCTURES

---

12010 06 **Phononic crystal for dynamic viscosity determination (Invited Paper)** [12010-45]

---

## OPTOELECTRONIC PROPERTIES OF TWO-DIMENSIONAL MATERIALS

---

12010 07 **Highly emitting colloidal MoS<sub>2</sub> quantum dots for optoelectronic applications** [12010-60]

12010 08 **Hybrid organic, inorganic two-dimensional layered materials for photodetectors and photovoltaics** [12010-61]

---

## POSTER SESSION

---

12010 09 **Angular-dependent asymmetric plasmonic resonance of inclined nanopillars using stencil nanolithography** [12010-62]

12010 0A **Design of all-optical 2x1 line selector using metal-insulator-metal plasmonic waveguide based Mach-Zehnder interferometer** [12010-64]

- 12010 0B **A tunable Fabry-Perot cavity stabilized via a mechanically connected shearing interferometer**  
[12010-71]
- 12010 0C **Height distributions of uncapped InAs/InGaAsP/InP quantum dashes and their effect on emission wavelengths** [12010-72]
- 12010 0D **A systematic post-growth thermal annealing step for receding size inhomogeneity inside multiple InAs/In<sub>x</sub>(Ga)<sub>1-x</sub>As sub-monolayer quantum dot layers** [12010-73]
- 12010 0E **A comparative study of analog, digital, and linear alloy technique on the strain and optical properties of symmetrical InGaAs/InAs/InGaAs quantum dot-in-a-well (DWELL) heterostructure**  
[12010-74]
- 12010 0F **High energy proton implantation effect on the emission wavelength and strain phenomenon of strain coupled InAs/In(Ga)As submonolayer (SML) QDs and Stranski-Krastanov (SK) QDs**  
[12010-75]
