# 2022 IEEE Global Engineering Education Conference (EDUCON)

## Table of Contents

Title	Page range
Work-In-Progress: Converting textual software engineering class diagram exercises to UML models	1–3
Work-in-Progress: LabVIEW Application Programming Interfaces for Remote Access to Oscilloscope and Arbitrary Waveform Generator	4–6
Work-in-Progress: What Else Matters When Gamifying a Learning Activity	7–9
Gamit! Interactive platform for gamification	10–13
Work in Progress: Perception of complex engineering problem among capstone design students	14–16
Teaching effective Cybersecurity through Escape the Classroom Paradigm	17–23
Efficient Structural Analysis of Source Code for Large Scale Applications in Education	24–30
Seek-and-Find-Drawings in the Research of Students' Conceptions in Computer Science Education	31–35
Learning CAN bus communication with a remote laboratory	36–40
Technology Assessment as a Field of Professional Competency of Technoscience Society Engineers	41–44
Practical UML Programming based on the Executable UML Method at Secondary School Students	45–50
Semi-automatic generation of textual exercises for software engineering education	51–56
How self-reliant Peer Teaching can be set up to augment learning outcomes for university learners	57–62
Half-full or half-empty? The impact of influential events pre- and intra-COVID-19 pandemic on enrolment, progression and completion of online courses	63–72
Pictoch: A Block-based Programming Learning Environment through Pictogram Content Creation	73–78
Clustering Young Children's Coding Project Scores with Machine Learning	79–85
Interdisciplinary CS1 for Non-Majors: The Case of Graduate Psychology Students	86–93
H2O Learn - Hybrid and Human-Oriented Learning: Trustworthy and Human-Centered Learning Analytics (TaHCLA) for Hybrid Education	94–101
Using transdisciplinary problem-oriented teaching approaches to inspire students for the diversity of engineering sciences	102–107
Scenarios for student-centred learning: RFID Pocket Lab and IoT Platform as teaching tools	108–116
An Experience Report on Transitioning to Blended Learning and Portfolio-assessment: a Cross-campus Course in Programming	117–122
Learning to Program: an In-service Teachers' Perspective	123–132
Game-Based Learning for Young Children: A Case Study	133–138
Computer Science Education in Angola: The Key Challenges	139–147
Applying Project-based Learning to Improve Computer Network Courses: An Experience Report	148–156
The Ethical Competency Development Framework	157–163
Computer Science in Schools: A Literature Mapping of Professional Development for In-Service Teachers	164–173
Investigation of Student's Engagement in Blended PBL-based Engineering Course and its Influence on Performance	174–179
Hands-on Physics Experiments for K-6 Teachers at CERN	180–188
Implementation of Virtual Concurrent Engineering Tools in Engineering Education 4.0	189–194
Idea Lab: Bridging Product Design and Manufacturing in Engineering Education 4.0	195–200
Virtual Museum Tours for Schools: Teachers' Experiences and Expectations	201–209
Providing additional support in an introductory programming course	210–216
Can Math Be a Bottleneck? Exploring the Mathematics Perceptions of Computer Science Students	217–225
Online teaching and learning due to Covid-19: Case study on the impact on engineering students	226–235
Analysis of Graduate Attributes Assessment in Final Year Engineering Design Project-What are the Global Practices?	236–241
Hands-on Experiments in Electricity for Physics Teachers and Students	242–248
STEM Lab on Climate Change with Simple Hands-on Experiments	249–256
A Review of Student-Centered Evaluation: Functions and Perceptions	257–260
Academic Support for Deaf and Hard of Hearing Students in Inclusive Engineering Education Programs: Key Decisions	261–269
Learn Programming In Virtual Reality? A Case Study of Computer Science Students	270–275
Cross-university certification system as proof of competence in project management	276–284
Fostering Creativity in Seniors and Freshman Students of Engineering	285–291
Conversational Intelligent Tutoring Systems for Online Learning: What do Students and Tutors Say?	292–298
Improving Student Outcomes Attainment by Project Based Learning in Electrical Machines	299–306
Flipped Classroom with Digital Circuits: An HTML5-based Interactive Simulation Tool	307–312
Are negative emotions useful for learning?	313–319
Cyber-SoftBook: A Platform for Collaborative Content Development and Delivery for Cybersecurity Education	320–327
Education and Training for Automation 4.0 in Thailand - ETAT	328–332
Self-reliant peer teaching as an additional dimension of university-level education for high potentials	333–338
Take Home Lab as a chance for practical experience and problem based learning in a remote working situation	339–343
Path to Outcome Based Higher Education: An Analysis of Influence of Socio-demographic Factors on Student Engagement	344–350

# 2022 IEEE Global Engineering Education Conference (EDUCON)

## Table of Contents

Title	Page range
Active Learning of Students with Diverse Goals and Backgrounds in the Light of Industry 4.0 Requirements	351–355
Self-Assessment tool with topic-driven navigation for algorithms learning	356–363
A systematic review of paper-based versus computer-based testing in engineering and computing education	364–372
Evaluation of First-Year Student's Learning of Engineering Ethics in a Blended PBL Course	373–378
Study on Massive Open Online Courses in Universities	379–385
A STEM intervention on Students' Attitudes Towards Science	386–393
Design Process of Extended Reality Educational Resources in Engineering: A Comparison of Three Cases in Latin American Universities	394–399
Hybrid approach for e-learning in Electric and Electronic Circuits laboratory courses	400–405
Introducing Project Based Learning for Teaching and Learning Electrical Drives: A case of UPV	406–412
Analysing Students' Problem Solving Capabilities to Support Teaching in Software Development	413–418
Teaching reflective practice in teams: In-person and virtual activities	419–422
Retention and support strategies for university students during COVID-19 pandemic	423–427
Computing Competencies: Mapping CC2020 Dispositions to SFIA Responsibility Characteristics	428–437
Statistical Analysis Methods in Engineering Education Research: A comprehensive state-of-the-art review	438–444
COACH_ING EDUCATIONAL MODEL: - analysis and application for business	445–450
MaS: Modeling At School – On the Benefits and Skill Development of the Use of Modeling Diagrams at School	451–457
Codifying Systematic Manuscript Preparation Checklists as a Training and Productivity Resource for Research Students	458–465
From the classroom to the game: applying available pedagogical guidelines in game-based learning	466–472
Student Success in Asynchronous STEM Education: measuring and identifying contributors to learner outcomes	473–479
Women Empowering Women: A mentoring program	480–484
Virtual labs: 5 ways to connect with Factory IO for mechatronics engineering courses	485–490
A Course Design for Teaching Leadership Skills	491–497
The Universal IT Support Design for Engineering Education	498–507
A framework for self-organized learning environments to develop soft skills in geographically distributed and multicultural engineering teams	508–512
Factors Impacting Students' Creativity-related Self-efficacy in an Undergraduate Makerspace-based Course	513–522
Design of the Smart Schoolhouse Self-assessment Model	523–531
An Analysis of Gamified Mobile Applications to Educate Children about Astronomy	532–536
Using Machine Learning Methods to Understand Students' Performance in an Engineering Course	537–540
Software engineering, bridging theory and practice in an agile learning environment	541–546
Deploy Social Assistive Robot (SAR) to develop symbolic play and imitation skills in students with Autism Spectrum Disorder (ASD)	547–552
Adapting a Very Small Size Soccer (VSSS) competition for learning robotics in virtual teaching	553–558
A Digital Twin implementation for Mobile and collaborative robot scenarios for teaching robotics based on Robot Operating System	559–564
Virtual Dissection Activities as a Strategy for Blended Synchronous Learning in the New Normal	565–570
Connecting Design and Engineering Physics with Reverse Engineering	571–578
Virtual reality as a flexible resource to improve engineering education	579–585
Enhancing Students' Critical Thinking and Visualization Skills of Three-Dimensional Problems in Electromagnetics	586–589
Training of engineers: approaches to customization of educational programs	590–596
Implementation of Learner Generated MOOC Through Inter-Institute Faculty - Student Peer Collaboration	597–602
Cultivating mathematical thinking with SCRATCH, or approaching programming via geometry?	603–609
Penetration of Cooperative Learning in Engineering Education: A Systematic Literature Review	610–619
A Tangible-Tool-Based Lesson Plan on Cipher Key Exchange Protocol for Early-Stage Learners	620–627
Serious games in management to support the active construction of knowledge in engineering studies	628–633
Reform of active pedagogy in the age of Covid	634–639
Self-Directed Learning using Eye-Tracking: A Comparison Between Wearable Head-Worn and Webcam-based Technologies	640–643
Evaluating Usability and Educational Effectiveness of a Serious Game for Programmers Using Alternative Interfaces and Types of Activities	644–651
Application of Somatosensory Camera in Robot Remote Experimental Teaching	652–655
Identify the necessary skills for designing the training tracks for the next-gen of lighting engineers	656–662
EDU Movies: using fiction movies for student centered learning	663–669
EXECUTE: Exploring Eye Tracking Data to Support E-Learning	670–676
In-the-Online-Class Remote Lab in Post COVID-19 Pandemic	677–682
Implementation of hybrid chemistry labs as a learning strategy in post-COVID times	683–686
An Electric and Electronic Circuit Remote Laboratory in a Control Course	687–694
ASSESEMENT AND INTEGRATED STEAM IN ENGINEERING EDUCATION	695–703
Predicting Students Performance Using Eye-Gaze Features in an Embodied Learning Environment	704–711

# 2022 IEEE Global Engineering Education Conference (EDUCON)

## Table of Contents

Title	Page range
Extracting Learning Performance Indicators from Digital Learning Environments	712–718
Reasoning Skills Assessment in Information Technology National Entrance Examination Reform; A Design Science Approach	719–726
Students' Expectations Towards Multi-Campus Courses	727–732
Unintended Consequences when the Engineering Design Team is Noninclusive: An Exploration of the Literature	733–738
Digital teaching system StudyWays® as a new educational concept	739–745
Children's learning based on the colors in the fruit's perception in the techno-emotional cooking: Case study of emotions delimitation	746–751
Gamification as a strategy in collaborative learning against virtual education in times of pandemic	752–756
Studying the impact of learning situation on learner model	757–762
Linux, LaTeX, and Python in secondary and baccalaureate	763–768
Teaching and Facilitating an Online Learning Environment for a Web Programming Module	769–774
Collaborative tools web 3.0 in the teaching of mathematics in times of covid-19 pandemic	775–779
Learning sign language basics supported by assistive technology	780–784
Flipped classroom in the meaningful learning of the students of the Basic Education Career: Case study Technical University of Ambato	785–789
An Insight into Cultural Competence and Ethics in K-12 Artificial Intelligence Education	790–794
Classification of Students' Misconceptions in Individualised Learning Environments (C-SMILE): An Innovative Assessment Tool for Engineering Education	795–800
A Guide Towards a Definition of Computational thinking in K-12	801–810
Industrial engineering practice: Process approach for equity and inclusion culture	811–815
Developing disciplinary competencies in an "hybrid model" comparing "on-line" versus "face-to-face" interaction between students and lecturers	816–821
A PROPOSAL FOR MICROMANAGEMENT OF PEOPLE THROUGH RPG CARDS IN EDUCATION FOR INNOVATION.	822–828
Service-learning as a bridge to connect theory and practice: A case study	829–835
A hydraulic 3D-lab based on virtual Gora dam visits at Call of Duty Warzone to Develop Student's Competencies During the COVID-19 Pandemic	836–843
Design of Research Canvas to align Research Efforts at Engineering Education Research Centre in India	844–849
Structuring research experiences for undergraduate engineering students through research problems in engineering education	850–856
Assessment of command structuring in Scratch programming using the SOLO taxonomy	857–862
Participatory Approach to Engineering Service Learning Programs - Quality Framework for the Implementation of Unnat Bharat Abhiyan Program in Indian	863–872
A COVID-Band for a Safer School Environment	873–877
Active Learning on the collaborative digital twin of the process plants	878–883
Bringing the Industry Expertise to the Classroom for Enhancing Life-Long Learning	884–889
Influence of COVID-19 on the university examination situation of students with impairments	890–893
Effectiveness of introducing concept-wise questions through post-tests in ensuring student learning	894–900
Trustworthy Autonomous Systems (TAS): Engaging TAS experts in curriculum design	901–905
PenQuest Reloaded: A Digital Cyber Defense Game for Technical Education	906–914
Intelligent analysis of labor market and educational content matching	915–920
EduML: An explorative approach for students and lecturers in machine learning courses	921–928
Continuous Examination by Automatic Quiz Assessment Using Spiral Codes and Image Processing	929–935
AutoQuery - A simple natural language to SQL query generator for an e-learning platform	936–940
Teaching Microcontrollers - using Arduino as a Platform	941–945
Development and Assessment of a Web-based Platform for a hands-on Physics Lab teaching measurements and linear regression	946–955
Teaching Solar Energy Systems Design using Game-Based Virtual Reality	956–960
Easy or Difficult! MOOC difficulty and retention	961–968
Integrating Industry 4.0 in engineering education during a global pandemic: Approach and Learning Efficacy	969–974
Covid-19 and Online Learning Challenges in Engineering Education: A Case Study of the American University of Sharjah	975–980
Exploring the factors influencing students' experience with challenge-based learning: a case study	981–988
A Recommendation Algorithm for University Master Tutors Based on Machine Learning	989–997
Digital Transformation(DX) for Skill Learners - The Design Methodology and Implementation of Educational Chatbot using Knowledge Connection and	998–1003
CryptoScratch: Developing and evaluating a block-based programming tool for teaching K-12 cryptography education using Scratch	1004–1013
Development of Student's Innovative Solution Based on Work-Integrated Learning Activity	1014–1019
Towards developing a learning analytics dashboard for a massive online robotics competition	1020–1025
Student-led organisations and STEM education: a review	1026–1030
Student-led organisations impact on STEM students' entrepreneurial behaviour: insights from Portugal and Brazil	1031–1035
IEEE Standards: Powering Innovation and your Career	1036–1043
Understand the influence of learning analytics dashboards on learner self-regulation and academic success	1044–1047
Enhancing Automatic Attendance System Using Face Recognition	1048–1054
Students Perception and Satisfaction on Technology-enhanced Active Student Engagement in Online Teaching and Learning	1055–1061

# 2022 IEEE Global Engineering Education Conference (EDUCON)

## Table of Contents

Title	Page range
Engineering Training in The Context of Digital Transformation	1062–1068
Integrating Research Elements into Computer Science Degree Programs: Preparing Students to Engage in Research Projects	1069–1073
Software engineering students' perceptions for a 3D Learning environment regarding anxiety.	1074–1081
A Computational Thinking Course for Pre-Service Teachers	1082–1088
Teacher-guided Autonomous Learning Enabled by Artificial Intelligence Empowered Remote Experiment Platform	1089–1094
Enhanced engagement through instructor-created interactive video assignments in a flipped electrical engineering classroom	1095–1103
Redesigning international student mobility for global competence development	1104–1112
Physical and Virtual Game Based Experiential Learning for Supply Chain and Operations Management Teaching Practice and Effectiveness	1113–1120
Design & Deployment K-12 Educational Robotics Activities in Tunisia Public Primary Schools.	1121–1127
Coders Assembly - Peer Assisted Learning Model for Freshman Programming Courses	1128–1134
An innovative course delivery model for industry-master programs – presentation of a case-study at the University of South-Eastern Norway	1135–1143
Storified Programming MOOCs: A Case Study on Learner Engagement and Perception	1144–1153
Development of a Vignette-based Instrument to Assess Students' Perception of the Teacher's Empathy during Collaborative Algorithmic Problem-solving Tasks	1154–1160
Efforts and Suggestions for Improving Cybersecurity Education	1161–1168
Cryptographic Algorithms and Computer Security Principles Gamification	1169–1178
Creating Educational and Research Tools for QoS-Focused Software-Defined Networking Projects	1179–1182
Challenge based Collaborative Online International Learning: A case of Mexico and Colombia.	1183–1188
Visualization of Students' Solutions as a Sequential Network	1189–1194
Impact of COVID-19 pandemic to EDUCON: a bibliometric analysis	1195–1202
Quantifying the Impact of Online Teaching of Fundamentals of Communication Systems on Students' Achievements	1203–1207
Competence development in student-centered learning environments	1208–1212
Decreasing exam-anxiety levels with mindfulness through EEG measurements	1213–1220
IT skills and language challenges hindering student-centred learning: A case of a rural Eastern Cape University in South Africa	1221–1227
An Effective Methodology for the Attraction of Students into Engineering Programs for Post-Covid Normality	1228–1234
Risk Management for A Resilient and Sustainable Engineering Education	1235–1240
Internet of Things Meets Machine Learning: A Water Usage Alert Example	1241–1247
Responsibility and Challenge Based Learning (CBL)	1248–1253
An AI-Assisted Bias Detection Framework for Equity-Driven Education	1254–1263
Can Social Robots Effectively Elicit Curiosity in STEM Topics from K-1 Students During Oral Assessments?	1264–1268
Virtual Reality for educating Qatari Sign Language using signing avatar: The future of creative learning for deaf students	1269–1274
Experiential learning at home in an engineering thermodynamics course	1275–1278
Towards flexible delivery in engineering education: students' perception on block-teaching delivery	1279–1284
Remote Practical Work Environment based on Containers to replace Virtual Machines	1285–1290
Formation of Skill standards for Printed Circuit Board Assembly Inspection by Define-Measure-Analyze- Improve-Control method	1291–1295
Business Continuity & Disaster Recovery (BC/DR) - A simulation game for holistic cyber security education	1296–1302
Analysis of dual and non-dual student learning outcomes and student dropout data	1303–1309
Educational Test-bed for Maintenance 4.0	1310–1315
PBL strategy for Learning Maintenance Engineering	1316–1321
Developing Applications for Children With Special Needs Into a Project Based Learning Approach at Human - Computer Interaction Course	1322–1329
A Challenge Based Model for the Development of Digital Transformation and Disciplinary Competences in Structural Engineering Courses	1330–1335
Fab Lab-based learning: an environment to promote Women and Leadership in Engineering Education	1336–1345
A cybersecurity competition to support the autonomous, collaborative, and personalized learning in computer engineering	1346–1354
Roadmap for development of skills in Artificial Intelligence by means of a Reinforcement Learning model using a DeepRacer autonomous vehicle	1355–1364
Education Path: Student orientation based on the job market needs	1365–1373
A Flexible Teaching Model with Digital Transformation Competences for Structural Engineering Courses	1374–1380
Implementation of an environmental laboratory workshop as part of distance learning	1381–1386
Career Counseling Chatbot using Microsoft Bot Frameworks	1387–1392
Coaching to support ethics learning in an interdisciplinary challenge-based learning course	1393–1400
Virtual laboratory workshop in physics	1401–1404
Neural Network for Spam Recognition in Short Message Services as an Instructional Application for Students of Vocational Education and Training	1405–1412
Beautiful patterns' MIT and Tec de Monterrey International Bootcamp: engineering women students teaching IT to high-school women students	1413–1418
The role of higher education towards sustainable consumption behavioural change: topics discussed in sustainable consumption education	1419–1428
The implementation of the flipped classroom model in the teaching of educational robotics: A study in secondary school students	1429–1436
arPcTECHture - gamified educational 3D virtual world for introductory concepts in computer architecture	1437–1442

# 2022 IEEE Global Engineering Education Conference (EDUCON)

## Table of Contents

Title	Page range
Micro-Grid Educational Laboratory Modernization using IEDs	1443–1447
Personalized Micro-credentials based on Learning Analytics for reducing the gap University - Industry	1448–1454
Is CoI framework a sign of deep and meaning learning outcomes?	1455–1459
Gradual and Tolerant Programming for Novices	1460–1466
Implementation of BIM and game engines for engineering online learning	1467–1472
Ideas Generation and Integration: A Method For Teamwork In A Virtual Environment	1473–1479
International Innovative Labs – I-Living-Labs	1480–1489
One kit to rule them all: designing take home lab kits at programme level	1490–1495
Programmable Hardware BBC micro:bit as a Tool for Developing Teacher Competencies.	1496–1501
Identifying the Motivational Influences on Students' Choice of Engineering Major	1502–1511
Gamification in the teaching of prevention measures for covid 19	1512–1516
Using a Theory of Action to Define Effective Pre-University STEM Programs	1517–1522
From xc-MOOC to e-MOOC: A case study as a reference model and a proposed non-linear approach to an evolved MOOC	1523–1532
The flipped classroom in meaningful math learning: case study eighth year of EGB	1539–1543
The use of web 3.0 tools for reading skill development: Case blogs in virtual education	1544–1548
Natural Language Processing for Learning Assessment in STEM	1549–1554
Designing and Using Capture The Flag for Coordination and Interaction in Engineering Education	1555–1560
The intervention, intersection and impact of social sciences theories upon computing education	1561–1570
A computational tool for engineer dropout prediction	1571–1576
Artificial intelligence in African schools: Towards a contextualized approach	1577–1582
Circular Challenge: education for the creation of a zero-waste world	1583–1586
Integrated Model for Comprehensive Digital Education Platforms	1587–1593
Application of graph theory in teaching and understanding of the mathematical problems	1594–1601
How can we evaluate? A Systematic Mapping of Maker Activities and their Intersections with the Formal Education System	1602–1608
EASLE EDUCATIONAL PLATFORM AS A TOOL TO DEVELOP READING SKILLS	1609–1614
The transition from study to work: Early career experiences of recent UCL Integrated Engineering Programme (IEP) graduates	1615–1620
Personalized e-learning recommender system based on a hybrid approach	1621–1627
SPaRk-Bot: An All-In-One Educational Robotic Platform	1628–1633
Impersonating Chatbots in a Code Review Exercise to Teach Software Engineering Best Practices	1634–1642
Teaching Expert Development Project by KOSEN Security Educational Community	1643–1651
How to survive a PhD – using Design Thinking methods and the Business Model Canvas	1652–1657
Handwriting treatment and acquisition in dysgraphic children using a humanoid robot-assistant	1658–1663
Aligning Engineering Education with Industrial Needs through specialized courses	1664–1669
On the link between Education and Industry 4.0: a framework for a data-driven education design	1670–1677
What do teachers think and do about Sustainability at engineering degrees? A new instrument to know it.	1678–1682
Using CDIO Principles for Teaching of Mechanical Design Courses	1683–1688
Challenges in Teaching Assembly Language Programming – Desired Prerequisites vs. Students' Initial Knowledge	1689–1698
The Development of a Readiness Assessment Framework for Tomorrow's SMEs for Adopting the Educational Components of future of I4.0	1699–1708
Raspberry Pi Applications in Electronics and Control Laboratories	1709–1713
Innovative System Design for Remote Air Traffic Control Simulation Training	1714–1720
Analytics for Supporting Teaching Success in Higher Education: A Systematic Review	1721–1727
Identifying Success Criteria for Sustainable AI-based Online Laboratory Courseware System	1728–1733
Work-In-Progress: Code Quality Issues of Computing Undergraduates	1734–1736
Cyber Government for Sustainable Governance: Examining Solutions to Tomorrow's Crises and Implications through the 5th wave theory, Edu 5.0 concept and	1737–1746
Mapping the future sustainable, through the 5th wave/tomorrow age theory or theory of comprehensive everything with a focus on educational SMEs	1747–1761
WORK IN PROGRESS: A workflow for programming learning, working on version control remote repositories	1762–1764
Work-in-Progress: Computing Sentence Similarity for Short Texts using Transformer models	1765–1768
WaterMobile & WaterTalk– Teaching K-12 Students about Water through Hands-on Experimentation.	1769–1771
Augmented Reality as an enabling technology in the design of a workstation	1772–1778
Work-in-Progress: The vector of increasing the attractiveness of modern master degree programmes in engineering education at a regional university	1779–1782
The Jennifer Aniston Neuron and Other Adventures in Neuroscience: an Informal Learning Environment	1783–1784
Work-in-Progress: The Development of a Smart-Environments Learning Kit for Computer Science Classes	1785–1787
FRIYAY – A Contemporary Model of Education for Engineering and Management Institutions	1788–1795
A Vision of Teaching and Learning with AI	1796–1803

# 2022 IEEE Global Engineering Education Conference (EDUCON)

## Table of Contents

Title	Page range
Fostering Knowledge Sharing in Education-as-a-Service Communities: A Learning Management System for Lecturers	1804–1813
ArSL21L: Arabic Sign Language Letter Dataset for Metaverse	1814–1821
Student Experiences of PBL During Remote Learning: A Case Study	1822–1823
Smart Cities data analysis with Power BI and R	1824–1828
Promoting movement and strengthening arithmetic performance through gamification - The development of an IT-based learning app	1829–1838
Replication of an Evaluation of Teacher Training in the Classification of Programming Exercises Using Bloom's Taxonomy	1839–1848
Toward a Game-like Experience: Design of a Modern User Interface of a Simulation Game for Teaching Business Process Digitalization	1849–1857
Learning by gaming: Improvement of User Experience of a Simulation Game for Teaching the Digital Transformation and its Administration Cockpit	1858–1867
The four business models for AI adoption in education: Giving leaders a destination for the digital transformation journey	1868–1872
A closer look to STEM education across continents: insights from a multicultural panel discussion	1873–1880
Supporting instructors in the design of actionable feedback for MOOCs	1881–1888
Resilient Learning as a Tool for Excellence: Laurea's Students in the ECHO H2020 Project during the COVID-19 Pandemic	1889–1894
State-of-the-art on writing a literature review: An overview of types and components	1895–1902
Now what? Pedagogical implications of a shift to open book assessment of vector calculus	1903–1909
Phenomenon-based Learning for Age 5.0 Mindsets: Industry, Society, and Education	1910–1915
Smart Governance for Educational Sustainability: Hybrid SMEs & the 5th wave theory Towards Mapping the Future Education in Post-Covid Era	1916–1926
Design Thinking: a didactic-methodological proposal for the training of computer science lecturers	1927–1933
Watch and Learn Using Code Snippets	1934–1937
Reconfiguring the boundaries between learning and assessment in a Vector Calculus course for engineering students	1938–1941
Gamification for Software Engineering Students -an Experience Report	1942–1947
Gender analysis on the Ph.D. theses defended in Spain in the field of Optics and Photonics	1948–1955
Work in Progress: Learning Fundamental Robotics Concepts Through Games at Bachelor Level	1956–1958
Remote Hardware-in-the-Loop Laboratory and its Application in Engineering Education	1959–1964
Programming Teaching Interaction	1965–1969
LMS Logs and Student Performance: The Influence of Retaking a Course	1970–1974
Swedish Students' Expectations on Learning Analytics in Higher Education	1975–1980
Towards a Conceptual Model for a Smart Open learning environment based on Computational Thinking	1981–1987
A Proposed Machine Learning Based Approach to Support Students with Learning Difficulties in The Post-Pandemic Norm	1988–1993
Online assessment of computer vision and robotics skills based on a digital twin	1994–2001
Assessing higher levels of learning through real-life problems in engineering mathematics	2002–2006
The SM-TMC (South Mediterranean Tunisian Maintenance Centre of Excellence) project	2007–2012
Prototype for Crowd-based Co-creation of Artificial Intelligence Natural Language Conversational Agents	2013–2021
MATLAB and Python Open Book Assessments: Lessons from Two UK Institutions	2022–2027
Orchestrating special education during the COVID-19 lockdown. A mapping study of the technologies and challenges	2028–2032
Work-in-progress: Data Science Challenge-X: self-directed, competence-based, project-based learning	2033–2036
Rethinking Women in Engineering Marginalisation: Beyond Interest Ignition	2037–2043
Work-in-Progress: A Holistic Approach to Bridging the Gap between Power Engineering Education and Electric Power Industry	2044–2048
Work-in-progress: Internet-mediated and open book assessments to improve wellbeing	2049–2052
CODI – A Web Application to Facilitate Live, Remote Programming Labs	2053–2061
An immersive learning model by linking with companies as educational partners to improve the performance of industrial engineering students	2062–2070
Framework for inclusive design: an interdisciplinary, experiential learning approach in engineering education	2071–2076
Using e-Learning Standards to Improve Serious Game Deployment and Evaluation	2077–2083
Engineering IoT systems in the convergence between agronomic and computer sciences	2084–2087
Linking Digital Transformation to Learning Strategies and Pedagogy	2088–2092
Developing Digital Transformation Management Graduate Education	2093–2098
The relationship of strategy and technology in education: Bidirectional pedagogical considerations	2099–2103
Impact of alternative designs of multimedia elaboration on learning outcomes: Towards personalized learning of Software Engineering.	2104–2113
Enterprise Resource Planning integrated with Business Analytics in Higher Education	2114–2120
Preparing Future SQA Professionals: An Experience Report of Metamorphic Exploration of an Autonomous Driving System	2121–2126
Work in Progress – Augmented Reality Smart Tele-Assisting Technology for Enhancing Engineering Education	2127–2130
