**Volume 11967**

Proceedings of SPIE, 1605-7422, V. 11967

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at [SPIDigitalLibrary.org](http://SPIDigitalLibrary.org).

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Single Molecule Spectroscopy and Superresolution Imaging XV*, edited by Ingo Gregor, Felix Koberling, Rainer Erdmann, Proc. of SPIE 11967, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

---

**Paper Numbering:** A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

# Contents

v *Conference Committee*

---

## NEW TECHNIQUES IN SUPERRESOLUTION MICROSCOPY

---

11967 02 **Resolution doubling in optofluidics and sample-scanning fluorescence microscopy [11967-3]**

---

## FLIM, FRET & FCS/CORRELATION

---

11967 03 **A user-friendly tool to convert photon counting data to the open-source Photon-HDF5 file format [11967-8]**

---

## NEW TECHNOLOGIES & BIOLOGICAL APPLICATIONS

---

11967 04 **32 Mcps time-correlated single photon counting with a single SPAD avoiding pile-up [11967-9]**

11967 05 **Extraction of diffusion state transitions in single-particle tracking data of membrane receptors [11967-11]**

---

## SUPERRESOLUTION MICROSCOPY/NANOSCOPY I

---

11967 06 **A structured illumination microscopy module using two micro-electromechanical system scanning micromirrors [11967-15]**

11967 07 **Novel semiconductor-laser-integrated active AFM optical probe with ultrashort pulses and nanoscale aperture [11967-17]**

11967 08 **Integrating SHG and two-color STED microscopy for super-resolved imaging of cell-matrix interactions in myocardium [11967-18]**

11967 09 **Super-resolution imaging of the third dimension of the actin cytoskeleton using metal-induced energy transfer and micropatterning [11967-19]**

---

## MULTIMODAL AND CORRELATIVE TECHNOLOGIES

---

11967 0A **Combining metal induced energy transfer and atomic force microscopy to probe the mechanoreponse of a focal adhesion [11967-21]**

11967 0B **Super-resolution imaging with metal-induced energy transfer reveals effect of force on the actin cytoskeleton** [11967-22]

**POSTER SESSION**

---

11967 0C **Modified blaze condition of a digital micromirror device for structured illumination microscopy** [11967-28]

11967 0D **Single molecule photobleaching reveals the piecewise arrangement of monomers in IAPP oligomers** [11967-29]
