Volume 12114

Proceedings of SPIE 0277-786X, V. 12114

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Autonomous Air and Ground Sensing Systems for Agricultural Optimization and Phenotyping VII*, edited by J. Alex Thomasson, Alfonso F. Torres-Rua, Proc. of SPIE 12114, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v *Conference Committee*

SESSION 1 ANALYTICS FOR UAV REMOTE SENSING IN AGRICULTURE

- 12114 02 **Leveraging multispectral imagery for fertigation timing recommendations through the N-time automated decision support system** [12114-1]
- 12114 03 **Volunteer cotton plant detection in corn field with deep learning** [12114-3]
- 12114 05 **Cotton crop disease detection on remotely collected aerial images with deep learning** [12114-5]
- 12114 06 **Machine-learning models for the real-time assessment of plant health using UAVs and RGB images** [12114-6]
- 12114 07 **A reinforcement learning approach for smart irrigation systems** [12114-2]

SESSION 2 UAV AND UGV SYSTEMS FOR AGRICULTURAL SENSING

- 12114 08 **Improved autonomous mobile ground control point robot collaborates with UAV to improve accuracy of agriculture remote sensing** [12114-7]
- 12114 0A **Collaboration between UAVs and UGVs for weed classification and detection** [12114-9]
- 12114 0B **Using under-canopy cotton imagery for cotton variety classification** [12114-10]
- 12114 0C **Smart Bi-eBikes (SBB): a low cost UGV solution for precision agriculture applications** [12114-11]

SESSION 3 ACCURACY AND AUTOMATION IN UAV PHENOTYPING

- 12114 0D **Error characterization of the at-altitude radiance ratio method for reflectance conversion of remote sensing data** [12114-14]
- 12114 0E **Machine learning based MTF estimation system evaluation utilizing slanted-edge targets in sUAS scenes** [12114-15]
- 12114 0F **Improved correlation between UAV-based remote sensing and proximal sensor data** [12114-17]

12114 0G **Airborne detection of vertical obstacles from sparse and cluttered point clouds** [12114-34]

SESSION 4 UAS REMOTE SENSING TO MEASURE ET AND MOISTURE

12114 0H **Irrigation scheduling using hybrid remote sensing-based evapotranspiration model informed by unmanned aerial system acquired multispectral and thermal imagery** [12114-19]

12114 0J **Estimating health of hybrid bermudagrass managed by soil moisture sensors using remote sensing technology** [12114-21]

SESSION 5 UAS REMOTE SENSING FOR CROP PHENOTYPING

12114 0K **Exploratory analysis of vineyard leaf water potential against sUAS multispectral and temperature information** [12114-22]

12114 0O **Early estimation of nitrogen stress and uptake in cotton based on spectral and morphological features extracted from UAV multispectral images** [12114-26]

12114 0P **Estimation of plant height using UAS with RTK GNSS technology** [12114-27]

POSTER SESSION

12114 0Q **Analysis of confounding factors that influence barley, corn, and alfalfa crop yield** [12114-28]
