SPIE

Volume 12208

Proceedings of SPIE 0277-786X, V. 12208

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:
Author(s), "Title of Paper," in *Organic and Hybrid Light Emitting Materials and Devices XXVI*, edited by Chihaya Adachi, Tae-Woo Lee, Franky So, Proc. of SPIE 12208, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v *Conference Committee*

THERMALLY ACTIVATED DELAYED FLUORESCENT MATERIALS AND OLEDs

12208 03 **High-efficiency and stable blue hyperfluorescence organic light-emitting diode (Invited Paper)** [12208-4]

FABRICATION OF FULL COLOR, PATTERNED, AND STRETCHABLE DISPLAYS

12208 04 **Hybrid color conversion control using OLED and perovskite emitters (Invited Paper)** [12208-25]

12208 05 **Water-repellent highly stable host material for colour conversion layer with enhanced quantum efficiency for micro-led display applications** [12208-28]

QUANTUM DOT LIGHT EMITTING MATERIALS AND DEVICES

12208 07 **Modulation in charge distribution via polyethylenimine-incorporation into ZnO electron transport layer and its impact on quantum-dots light emitting device stability** [12208-31]

ORGANIC AND PEROVSKITE LASERS II

12208 08 **Parametric investigation of ideal metal-dielectric photonic crystals** [12208-39]

12208 09 **Low onset stimulated emission in OLEDs** [12208-42]

MOLECULAR LEVEL APPROACHES FOR ORGANIC LIGHT EMITTING MATERIALS

12208 0A **The role of OLED emissive layer polarization in sub-turn-on charge accumulation** [12208-57]

POSTER SESSION

12208 0B Electronic and optical properties of double perovskites A_2BX_6 (A = Cs; B = Sn, and (X = Cl, Br, I.)
using modified Becke Johnson potential study [12208-60]
