**Volume 12578**

Proceedings of SPIE 0277-786X, V. 12578

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at [SPIDigitalLibrary.org](http://SPIDigitalLibrary.org).

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Optics Damage and Materials Processing by EUV/X-ray Radiation (XDam8)*, edited by Libor Juha, Saša Bajt, Stéphane Guizard, Proc. of SPIE 12578, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

---

**Paper Numbering:** A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

# Contents

v *Conference Committee*

---

## DAMAGE TO OPTICS/DETECTORS I

---

12578 03 **Radiation hardness of luminescent screens under FEL radiation** [12578-2]

12578 05 **High-power optical elements for 13.5nm EUV (Invited Paper)** [12578-4]

---

## MECHANISMS AND THEORY I

---

12578 09 **Materials under XUV irradiation: effects of structure, size, and temperature** [12578-10]

---

## MECHANISMS AND THEORY II

---

12578 0E **EUUV impact on silicon and carbon etching versus deposition** [12578-13]

---

## MECHANISMS AND THEORY III

---

12578 0J **Ion emission from plasmas produced by femtosecond pulses of short-wavelength free-electron laser radiation focused on massive targets: an overview and comparison with long-wavelength laser ablation** [12578-18]
