2023 IEEE 64th Annual Symposium on Foundations of Computer Science (FOCS) **FOCS 2023**

Table of Contents

Preface	xx
Organizers	xxi
Program Committee	xxii

Session 1A

Graph Colouring Is Hard on Average for Polynomial Calculus and Nullstellensatz	1
<i>Jonas Conneryd (Lund University; University of Copenhagen), Susanna F. de Rezende (Lund University), Jakob Nordström (University of Copenhagen; Lund University), Shuo Pang (University of Copenhagen; Lund University), and Kilian Risse (EPFL)</i>	
Clique Is Hard on Average for Unary Sherali-Adams	12
<i>Susanna F. De Rezende (Lund University, Sweden), Aaron Potechin (University of Chicago, USA), and Kilian Risse (EPFL, Switzerland)</i>	
On Lifting Integrality Gaps to SSEH Hardness for Globally Constrained CSPs	26
<i>Suprovat Ghoshal (Northwestern University & TTIC, USA) and Euiwoong Lee (University of Michigan, USA)</i>	
On Small-Depth Frege Proofs for PHP	37
<i>Johan Håstad (KTH Royal Institute of Technology, Sweden)</i>	

Session 1B

Thin Trees for Laminar Families	50
<i>Nathan Klein (University of Washington, USA) and Neil Olver (London School of Economics and Political Science, UK)</i>	
One Tree to Rule Them All: Poly-Logarithmic Universal Steiner Tree	60
<i>Costas Busch (Augusta University, USA), Da Qi Chen (University of Virginia, USA), Arnold Filtser (Bar-Ilan University, Israel), Daniel Hathcock (Carnegie Mellon University, USA), D Ellis Hershkowitz (Brown University, Rhode Island; ETH Zürich, Switzerland), and Rajmohan Rajaraman (Northeastern University, USA)</i>	

Optimal Fault-Tolerant Spanners in Euclidean and Doubling Metrics: Breaking the $\Omega(\log n)$ Lightness Barrier	77
<i>Hung Le (University of Massachusetts at Amherst, USA), Shay Solomon (Tel-Aviv University, Israel), and Cuong Than (University of Massachusetts at Amherst, USA)</i>	
Sub-quadratic $(1+\epsilon)$ -approximate Euclidean Spanners, with Applications	98
<i>Alexandr Andoni (Columbia University, USA) and Hengjie Zhang (Columbia University, USA)</i>	

Session 1C

Envy-Free Cake-Cutting for Four Agents	113
<i>Alexandros Hollender (EPFL, Switzerland) and Aviad Rubinfeld (Stanford University, USA)</i>	
Convergence of Approximate and Packet Routing Equilibria to Nash Flows Over Time	123
<i>Neil Olver (London School of Economics and Political Science, UK), Leon Sering (ETH Zürich, Switzerland), and Laura Vargas Koch (ETH Zürich, Chile; Universidad de Chile, Switzerland)</i>	
Simultaneous Auctions are Approximately Revenue-Optimal for Subadditive Bidders	134
<i>Yang Cai (Yale University, USA), Ziyun Chen (Tsinghua University, USA), and Jinzhao Wu (Yale University, USA)</i>	
Constant Approximation for Private Interdependent Valuations	148
<i>Alon Eden (The Hebrew University, Israel), Michal Feldman (Tel Aviv University, Israel), Kira Goldner (Boston University, USA), Simon Mavris (Tel Aviv University, Israel), and Divyarthi Mohan (Tel Aviv University, Israel)</i>	

Session 2A

Randomly Punctured Reed–Solomon Codes Achieve the List Decoding Capacity over Polynomial-Size Alphabets	164
<i>Zeyu Guo (The Ohio State University, USA) and Zihan Zhang (The Ohio State University, USA)</i>	
A Proof that Reed-Muller Codes Achieve Shannon Capacity on Symmetric Channels	177
<i>Emmanuel Abbe (EPFL) and Colin Sandon (EPFL)</i>	
Gilbert and Varshamov Meet Johnson: List-Decoding Explicit Nearly-Optimal Binary Codes	194
<i>Silas Richelson (University of California, USA) and Sourya Roy (University of California, USA)</i>	
Optimal Testing of Generalized Reed-Muller Codes in Fewer Queries	206
<i>Dor Minzer (Massachusetts Institute of Technology, USA) and Kai Zheng (Massachusetts Institute of Technology, USA)</i>	

Session 2B

Separating MAX 2-AND, MAX DI-CUT and MAX CUT	234
<i>Joshua Brakensiek (Stanford University, USA), Neng Huang (University of Chicago, USA), Aaron Potechin (University of Chicago, USA), and Uri Zwick (Tel Aviv University, Israel)</i>	
Triplet Reconstruction and all Other Phylogenetic CSPs are Approximation Resistant	253
<i>Vaggos Chatziafratis (University of California at Santa Cruz, USA) and Konstantin Makarychev (Northwestern University, USA)</i>	
Improved Hardness of Approximating k-Clique Under ETH	285
<i>Bingkai Lin (Nanjing University, China), Xuandi Ren (University of California at Berkeley, USA), Yican Sun (Peking University, China), and Xiuhua Wang (Tsinghua University, China)</i>	
Efficient Algorithms for Semirandom Planted CSPs at the Refutation Threshold	307
<i>Venkatesan Guruswami (UC Berkeley, USA), Jun-Ting Hsieh (Carnegie Mellon University, USA), Pravesh K. Kothari (Carnegie Mellon University, USA), and Peter Manohar (Carnegie Mellon University, USA)</i>	

Session 2C

The Minimal Canonical form of a Tensor Network	328
<i>Arturo Acuaviva (Universidad Complutense de Madrid, Spain), Visu Makam (Radix Trading Europe B.V., The Netherlands), Harold Nieuwboer (University of Amsterdam, The Netherlands), David Pérez-García (Universidad Complutense de Madrid, Spain), Friedrich Sittner (Universidad Complutense de Madrid, Spain), Michael Walter (Ruhr University Bochum, Germany), and Freek Witteveen (University of Copenhagen, Denmark)</i>	
Query-Optimal Estimation of Unitary Channels in Diamond Distance	363
<i>Jeongwan Haah (Microsoft Quantum, USA), Robin Kothari (Microsoft Quantum, USA), Ryan O'Donnell (Carnegie Mellon University, USA), and Ewin Tang (University of Washington, USA)</i>	
When Does Adaptivity Help for Quantum State Learning?	391
<i>Sitan Chen (Harvard University, USA), Brice Huang (MIT, USA), Jerry Li (Microsoft Research, USA), Allen Liu (Massachusetts Institute of Technology, USA), and Mark Sellke (Harvard University, USA)</i>	
Exponential Quantum Speedup in Simulating Coupled Classical Oscillators	405
<i>Ryan Babbush (Google Quantum AI, USA), Dominic W. Berry (Macquarie University, Australia), Robin Kothari (Google Quantum AI, USA), Rolando D. Somma (Google Quantum AI, USA), and Nathan Wiebe (University of Toronto; Canadian Institute for Advanced Research, Canada; Pacific Northwest National Laboratory, USA)</i>	

Session 3A

Attribute-Based Encryption for Circuits of Unbounded Depth from Lattices	415
<i>Yao-Ching Hsieh (University of Washington, USA), Huijia Lin (University of Washington, USA), and Ji Luo (University of Washington, USA)</i>	

ABE for Circuits with Poly(λ)-Sized Keys from LWE	435
<i>Valerio Cini (AIT Austrian Institute of Technology, Austria) and Hoeteck Wee (NTT Research, USA)</i>	
Learning in Pessiland via Inductive Inference	447
<i>Shuichi Hirahara (National Institute of Informatics, Japan) and Mikito Nanashima (Tokyo Institute of Technology, Japan)</i>	
Kolmogorov Comes to Cryptomania: On Interactive Kolmogorov Complexity and Key-Agreement	458
<i>Marshall Ball (New York University, USA), Yanyi Liu (Cornell Tech, USA), Noam Mazon (Cornell Tech, USA), and Rafael Pass (Tel Aviv University, Israel; Cornell Tech, USA)</i>	

Session 3B

A Randomized Algorithm for Single-Source Shortest Path on Undirected Real-Weighted Graphs ..	484
<i>Ran Duan (Tsinghua University, China), Jiayi Mao (Tsinghua University, China), Xinkai Shu (The University of Hong Kong, China), and Longhui Yin (Tsinghua University, China)</i>	
Faster High Accuracy Multi-Commodity Flow from Single-Commodity Techniques	493
<i>Jan van den Brand (Georgia Institute of Technology, USA) and Daniel J. Zhang (Georgia Institute of Technology, USA)</i>	
A Deterministic Almost-Linear Time Algorithm for Minimum-Cost Flow	503
<i>Jan van den Brand (Georgia Tech, USA), Li Chen (Georgia Tech, USA), Rasmus Kyng (ETH Zurich, Switzerland), Richard Peng (University of Waterloo, Canada), Yang P. Liu (Stanford University, USA), Maximilian Probst Gutenberg (ETH Zurich, Switzerland), Sushant Sachdeva (University of Toronto, Canada), and Aaron Sidford (Stanford University, USA)</i>	
Negative-Weight Single-Source Shortest Paths in Near-Linear Time: Now Faster!	515
<i>Karl Bringmann (Saarland University and Max Planck Institute for Informatics, Saarland Informatics Campus, Germany), Alejandro Cassis (Saarland University and Max Planck Institute for Informatics, Saarland Informatics Campus, Germany), and Nick Fischer (Weizmann Institute of Science, Israel)</i>	

Session 4A

Advisor-Verifier-Prover Games and the Hardness of Information Theoretic Cryptography	539
<i>Benny Applebaum (Tel Aviv University, Israel) and Oded Nir (Tel Aviv University, Israel)</i>	
On Pseudolinear Codes for Correcting Adversarial Errors	556
<i>Eric Ruzomberka (Princeton University, USA), Homa Nikbakht (Princeton University, USA), Christopher G. Brinton (Purdue University, USA), and H. Vincent Poor (Princeton University, USA)</i>	
A New Approach to Post-Quantum Non-Malleability	568
<i>Xiao Liang (NTT Research, USA), Omkant Pandey (Stony Brook University, USA), and Takashi Yamakawa (NTT, Japan)</i>	

Towards Separating Computational and Statistical Differential Privacy	580
<i>Badih Ghazi (Google Research), Rahul Ilango (MIT), Pritish Kamath (Google Research), Ravi Kumar (Google Research), and Pasin Manurangsi (Google Research)</i>	

Session 4B

Bridge Girth: A Unifying Notion in Network Design	600
<i>Greg Bodwin (University of Michigan, USA), Gary Hoppenworth (University of Michigan, USA), and Ohad Trabelsi (Toyota Technological Institute at Chicago, USA)</i>	
Planar Disjoint Paths, Treewidth, and Kernels	649
<i>Michał Włodarczyk (Ben-Gurion University of the Negev, Israel) and Meirav Zehavi (Ben-Gurion University of the Negev, Israel)</i>	
Flip-Width: Cops and Robber on Dense Graphs	663
<i>Szymon Toruńczyk (University of Warsaw, Poland)</i>	
Folklore Sampling is Optimal for Exact Hopsets: Confirming the \sqrt{n} Barrier	701
<i>Greg Bodwin (University of Michigan) and Gary Hoppenworth (University of Michigan)</i>	

Session 5A

Fourier Growth of Communication Protocols for XOR Functions	721
<i>Uma Girish (Princeton University, USA), Makrand Sinha (University of Illinois at Urbana-Champaign, USA), Avishay Tal (University of California at Berkeley, USA), and Kewen Wu (University of California at Berkeley, USA)</i>	
SAT Reduces to the Minimum Circuit Size Problem with a Random Oracle	733
<i>Rahul Ilango (EECS, Massachusetts Institute of Technology, USA)</i>	
Doubly-Efficient Interactive Proofs for Distribution Properties	743
<i>Tal Herman (Weizmann Institute of Science, Israel) and Guy Rothblum (Apple)</i>	
IOPs with Inverse Polynomial Soundness Error	752
<i>Gal Arnon (Weizmann Institute, Israel), Alessandro Chiesa (EPFL, Switzerland), and Eylon Yogev (Bar-Ilan University, Israel)</i>	

Session 5B

Lipschitz Continuous Algorithms for Graph Problems	762
<i>Soh Kumabe (The University of Tokyo, Japan) and Yuichi Yoshida (National Institute of Informatics, Japan)</i>	
Compressing CFI Graphs and Lower Bounds for the Weisfeiler-Leman Refinements	798
<i>Martin Grohe (RWTH Aachen University, Germany), Moritz Lichter (RWTH Aachen University, Germany), Daniel Neuen (University of Bremen, Germany), and Pascal Schweitzer (TU Darmstadt, Germany)</i>	

Strong Spatial Mixing for Colorings on Trees and its Algorithmic Applications	810
<i>Zongchen Chen (University of Buffalo), Kuikui Liu (MIT), Nitya Mani (MIT), and Ankur Moitra (MIT)</i>	
Singular Value Approximation and Sparsifying Random Walks on Directed Graphs	846
<i>AmirMahdi Ahmadinejad (Amazon, USA), John Peebles (Apple, USA), Edward Pyne (MIT, USA), Aaron Sidford (Stanford University, USA), and Salil Vadhan (Harvard University, USA)</i>	

Session 5C

Improved Streaming Algorithms for Maximum Directed Cut via Smoothed Snapshots	855
<i>Raghuvansh R. Saxena (Tata Institute of Fundamental Research, India), Noah G. Singer (Carnegie Mellon University, USA), Madhu Sudan (Harvard University, USA), and Santhoshini Velusamy (Toyota Technological Institute at Chicago, USA)</i>	
Streaming Lower Bounds and Asymmetric Set-Disjointness	871
<i>Shachar Lovett (University of California San Diego, USA) and Jiapeng Zhang (University of Southern California, USA)</i>	
Streaming Euclidean k-Median and k-Means with $o(\log n)$ Space	883
<i>Vincent Cohen-Addad (Google Research), David P. Woodruff (Carnegie Mellon University), and Samson Zhou (Texas A&M University)</i>	
Hidden Permutations to the Rescue: Multi-Pass Streaming Lower Bounds for Approximate Matchings	909
<i>Sepehr Assadi (University of Waterloo, Canada; Rutgers University, USA) and Janani Sundaresan (University of Waterloo, Canada)</i>	

Best Paper Talks

Strong Bounds for 3-Progressions	933
<i>Zander Kelley (University of Illinois Urbana-Champaign) and Raghu Meka (University of California)</i>	
The Subspace Flatness Conjecture and Faster Integer Programming	974
<i>Victor Reis (University of Washington, USA) and Thomas Rothvoss (University of Washington, USA)</i>	

Session 6A

Certified Hardness vs. Randomness for Log-Space	989
<i>Edward Pyne (MIT, USA), Ran Raz (Princeton, USA), and Wei Zhan (Princeton, USA)</i>	
Derandomization vs Refutation: A Unified Framework for Characterizing Derandomization	1008
<i>Lijie Chen (University of California, Berkeley, USA), Roei Tell (The University of Toronto, Canada), and Ryan Williams (Massachusetts Institute of Technology, USA)</i>	

Top-Down Lower Bounds for Depth-Four Circuits	1048
<i>Mika Göös (EPFL, Switzerland), Artur Riazanov (EPFL, Switzerland), Anastasia Sofronova (EPFL, Switzerland), and Dmitry Sokolov (EPFL, Switzerland)</i>	
Toward Better Depth Lower Bounds: A KRW-Like Theorem for Strong Composition	1056
<i>Or Meir (University of Haifa, Israel)</i>	

Session 6B

Handling Correlated Rounding Error via Preclustering: A 1.73-Approximation for Correlation Clustering	1082
<i>Vincent Cohen-Addad (Google Research, France), Euiwoong Lee (University of Michigan, Michigan), Shi Li (Nanjing University, China), and Alantha Newman (CNRS, Université Grenoble Alpes, France)</i>	
Deterministic Clustering in High Dimensional Spaces: Sketches and Approximation	1105
<i>Vincent Cohen-Addad (Google Research, France), David Saulpic (Institute of Science and Technology Austria, Austria), and Chris Schwiegelshohn (Aarhus University, Denmark)</i>	
The Price of Explainability for Clustering	1131
<i>Anupam Gupta (Carnegie Mellon University), Madhusudhan Reddy Pittu (Carnegie Mellon University), Ola Svensson (EPFL), and Rachel Yuan (Carnegie Mellon University)</i>	

Session 6C

Agnostic proper learning of monotone functions: beyond the black-box correction barrier	1149
<i>Jane Lange (MIT, USA) and Arsen Vasilyan (MIT, USA)</i>	
Near Optimal Memory-Regret Tradeoff for Online Learning	1171
<i>Binghui Peng (Columbia University, USA) and Aviad Rubinfeld (Stanford University, USA)</i>	
Tight Time-Space Lower Bounds for Constant-Pass Learning	1195
<i>Xin Lyu (University of California, Berkeley, USA), Avishay Tal (University of California, Berkeley, USA), Hongxun Wu (University of California, Berkeley, USA), and Junzhao Yang (Tsinghua University, China)</i>	
Optimal PAC Bounds Without Uniform Convergence	1203
<i>Ishaq Aden-Ali (UC Berkeley, USA), Yeshwanth Cherapanamjeri (MIT, USA), Abhishek Shetty (UC Berkeley, USA), and Nikita Zhivotovskiy (UC Berkeley, USA)</i>	

Session 7A

Weighted Pseudorandom Generators via Inverse Analysis of Random Walks and Shortcutting	1224
<i>Lijie Chen (Miller Institute for Basic Research in Science, University of California, Berkeley, USA), William M. Hoza (University of Chicago, USA), Xin Lyu (University of California, Berkeley, USA), Avishay Tal (University of California, Berkeley, USA), and Hongxun Wu (University of California, Berkeley, USA)</i>	
Explicit Orthogonal and Unitary Designs	1240
<i>Ryan O'Donnell (Carnegie Mellon University, USA), Rocco A. Servedio (Columbia University, USA), and Pedro Paredes (Princeton University, USA)</i>	
Polynomial-Time Pseudodeterministic Construction of Primes	1261
<i>Lijie Chen (UC Berkeley, USA), Zhenjian Lu (University of Oxford, UK), Igor C. Oliveira (University of Warwick, UK), Hanlin Ren (University of Oxford, UK), and Rahul Santhanam (University of Oxford, UK)</i>	
Two Source Extractors for Asymptotically Optimal Entropy, and (Many) More	1271
<i>Xin Li (Johns Hopkins University, MD USA)</i>	

Session 7B

Traversing Combinatorial 0/1-Polytopes via Optimization	1282
<i>Arturo Merino (TU Berlin, Germany) and Torsten Mütze (University of Warwick, United Kingdom)</i>	
The Vector Balancing Constant for Zonotopes	1292
<i>Rainie Bozzai (University of Washington, USA), Victor Reis (University of Washington, USA), and Thomas Rothvoos (University of Washington, USA)</i>	
A Deterministic Near-Linear Time Approximation Scheme for Geometric Transportation	1301
<i>Emily Fox (The University of Texas at Dallas) and Jiashuai Lu (The University of Texas at Dallas)</i>	

Session 8A

Computing Linear Sections of Varieties: Quantum Entanglement, Tensor Decompositions and Beyond	1316
<i>Nathaniel Johnston (Mount Allison University, Canada), Benjamin Lovitz (Northeastern University, USA), and Aravindan Vijayaraghavan (Northwestern University, USA)</i>	
Parallel Repetition for the GHZ Game: Exponential Decay	1337
<i>Mark Braverman (Princeton University, USA), Subhash Khot (New York University, USA), and Dor Minzer (Massachusetts Institute of Technology, USA)</i>	
Bounding the Quantum Value of Compiled Nonlocal Games: From CHSH to BQP Verification	1342
<i>Anand Natarajan (MIT, USA) and Tina Zhang (MIT, USA)</i>	
stateQIP = Statepspace	1349
<i>Tony Metger (ETH Zurich, Switzerland) and Henry Yuen (Columbia University, USA)</i>	

Session 8B

Constant-Factor Approximation Algorithms for Convex Cover and Hidden Set in a Simple Polygon	1357
<i>Reilly Browne (Stony Brook University, USA), Prahlad Narasimham Kasthurirangan (Stony Brook University, USA), Joseph S. B. Mitchell (Stony Brook University, USA), and Valentin Polishchuk (Linköping University, Sweden)</i>	
Improved Approximations for Vector Bin Packing via Iterative Randomized Rounding	1366
<i>Ariel Kulik (Technion, Israel), Matthias Mnich (Hamburg University of Technology, Institute for Algorithms and Complexity, Germany), and Hadas Shachnai (Technion, Israel)</i>	
Parameterized Approximation Schemes for Clustering with General Norm Objectives	1377
<i>Fateme Abbasi (University of Wrocław, Poland), Sandip Banerjee (University of Wrocław, Poland), Jarosław Byrka (University of Wrocław, Poland), Parinya Chalermsook (Aalto University, Finland), Ameet Gadekar (Aalto University, Finland), Kamyar Khodamoradi (University of Regina, Canada), Dániel Marx (CISPA Helmholtz Center for Information Security, Germany), Roohani Sharma (Max Planck Institute for Informatics, Germany), and Joachim Spoerhase (University of Sheffield, United Kingdom)</i>	
Memory-Query Tradeoffs for Randomized Convex Optimization	1400
<i>Xi Chen (Columbia University, USA) and Binghui Peng (Columbia University, USA)</i>	

Session 8C

Quartic Samples Suffice for Fourier Interpolation	1414
<i>Zhao Song (Adobe Research), Baocheng Sun (Weizmann Institute of Science), Omri Weinstein (The Hebrew University and Columbia University), and Ruizhe Zhang (Simons Institute)</i>	
Fast Numerical Multivariate Multipoint Evaluation	1426
<i>Sumanta Ghosh (California Institute of Technology, USA), Prahladh Harsha (Tata Institute of Fundamental Research, India), Simao Herdade (Yahoo Research, USA), Mrinal Kumar (Tata Institute of Fundamental Research, India), and Ramprasad Saptharishi (Tata Institute of Fundamental Research, India)</i>	
Locally Uniform Hashing	1440
<i>Ioana O. Bercea (IT University of Copenhagen), Lorenzo Beretta (University of Copenhagen), Jonas Klausen (University of Copenhagen), Jakob Bæk Tejs Houen (University of Copenhagen), and Mikkel Thorup (University of Copenhagen)</i>	
Generalizations of Matrix Multiplication can Solve the Light Bulb Problem	1471
<i>Josh Alman (Columbia University, USA) and Hengjie Zhang (Columbia University, USA)</i>	

Session 9A

Tight Space Lower Bound for Pseudo-Deterministic Approximate Counting	1496
<i>Ofer Grossman (MIT, USA), Meghal Gupta (U.C. Berkeley, USA), and Mark Sellke (Harvard University, USA)</i>	
Extracting Randomness from Samplable Distributions, Revisited	1505
<i>Marshall Ball (NYU, USA), Eli Goldin (NYU, USA), Dana Dachman-Soled (University of Maryland, USA), and Saachi Mutreja (Columbia University, USA)</i>	
Pseudorandom Hashing for Space-Bounded Computation with Applications in Streaming	1515
<i>Praneeth Kacham (Carnegie Mellon University), Rasmus Pagh (University of Copenhagen), Mikkel Thorup (University of Copenhagen), and David P. Woodruff (Carnegie Mellon University)</i>	
Work-Efficient Parallel Derandomization I: Chernoff-Like Concentrations via Pairwise Independence	1551
<i>Mohsen Ghaffari (MIT, USA), Christoph Grunau (ETH Zurich, Switzerland), and Václav Rozhoň (ETH Zurich, Switzerland)</i>	

Session 9B

Dynamic (1+epsilon)-Approximate Matching Size in Truly Sublinear Update Time	1563
<i>Sayan Bhattacharya (University of Warwick, United Kingdom), Peter Kiss (University of Warwick, United Kingdom), and Thatchaphol Saranurak (University of Michigan, USA)</i>	
Super-Logarithmic Lower Bounds for Dynamic Graph Problems	1589
<i>Kasper Green Larsen (Aarhus University, Denmark) and Huacheng Yu (Princeton University, USA)</i>	
The Complexity of Dynamic Least-Squares Regression	1605
<i>Shunhua Jiang (Columbia University, USA), Binghui Peng (Columbia University, USA), and Omri Weinstein (The Hebrew University and Columbia University, Israel)</i>	
Approximating Edit Distance in the Fully Dynamic Model	1628
<i>Tomasz Kociumaka (Max Planck Institute for Informatics, Saarland Informatics Campus, Germany), Anish Mukherjee (University of Warwick, UK), and Barna Saha (University of California, USA)</i>	

Session 10A

From Grassmannian to Simplicial High-Dimensional Expanders	1639
<i>Louis Golowich (University of California, USA)</i>	
HDX Condensers	1649
<i>Itay Cohen (Tel Aviv University), Roy Roth (Tel Aviv University), and Amnon Ta-Shma (Tel Aviv University)</i>	
Optimal Mixing of the Down-up Walk on Independent Sets of a Given Size	1665
<i>Vishesh Jain (University of Illinois Chicago, USA), Marcus Michelen (University of Illinois Chicago, USA), Huy Tuan Pham (Stanford University, USA), and Thuy-Duong Vuong (Stanford University, USA)</i>	

List Decoding of Tanner and Expander Amplified Codes from Distance Certificates	1682
<i>Fernando Granha Jeronimo (University of California, USA), Shashank Srivastava (Toyota Technological Institute, USA), and Madhur Tulsiani (Toyota Technological Institute, USA)</i>	

Session 10B

Chasing Positive Bodies	1694
<i>Sayan Bhattacharya (University of Warwick, UK), Niv Buchbinder (Tel Aviv University, UK), Roie Levin (Tel Aviv University, Israel), and Thatchaphol Saranurak (University of Michigan, USA)</i>	
Dynamic "Succincter"	1715
<i>Tianxiao Li (Tsinghua University, China), Jingxun Liang (Tsinghua University, China), Huacheng Yu (Princeton University, USA), and Renfei Zhou (Tsinghua University, China)</i>	
Dynamic Treewidth	1734
<i>Tuukka Korhonen (University of Bergen, Norway), Konrad Majewski (University of Warsaw, Norway), Wojciech Nadara (University of Warsaw, Norway), Michał Pilipczuk (University of Warsaw, Norway), and Marek Sokołowski (University of Warsaw, Norway)</i>	
Sensitivity and Dynamic Distance Oracles via Generic Matrices and Frobenius Form	1745
<i>Adam Karczmarz (University of Warsaw and IDEAS NCBR, Poland) and Piotr Sankowski (University of Warsaw, IDEAS NCBR, and MIM Solutions, Poland)</i>	

Session 11A

A Strong Composition Theorem for Junta Complexity and the Boosting of Property Testers	1757
<i>Guy Blanc (Stanford University, USA), Caleb Koch (Stanford University, USA), Carmen Strassle (Stanford University, USA), and Li-Yang Tan (Stanford University, USA)</i>	
New Lower Bounds for Adaptive Tolerant Junta Testing	1778
<i>Xi Chen (Columbia University, USA) and Shyamal Patel (Columbia University, USA)</i>	
Testing Graph Properties with the Container Method	1787
<i>Eric Blais (University of Waterloo, Canada) and Cameron Seth (University of Waterloo, Canada)</i>	
A $d^{1/2+o(1)}$ Monotonicity Tester for Boolean Functions on d -Dimensional Hypergrids*	1796
<i>Hadley Black (University of California, Los Angeles, USA), Deeparnab Chakrabarty (Dartmouth College, USA), and C. Seshadhri (University of California, Santa Cruz, USA)</i>	

Session 11B

Strongly History-Independent Storage Allocation: New Upper and Lower Bounds	1822
<i>William Kuszmaul (Harvard University, USA)</i>	

Tight Cell-Probe Lower Bounds for Dynamic Succinct Dictionaries	1842
<i>Tianxiao Li (Tsinghua University, China), Jingxun Liang (Tsinghua University, China), Huacheng Yu (Princeton University, USA), and Renfei Zhou (Tsinghua University, China)</i>	
Online Ordinal Problems: Optimality of Comparison-Based Algorithms and Their Cardinal Complexity	1863
<i>Nikolai Gravin (Shanghai University of Finance and Economics), Enze Sun (The University of Hong Kong), and Zhihao Gavin Tang (Shanghai University of Finance and Economics)</i>	
Collapsing the Hierarchy of Compressed Data Structures: Suffix Arrays in Optimal Compressed Space	1877
<i>Dominik Kempa (Stony Brook University, USA) and Tomasz Kociumaka (Max Planck Institute for Informatics, Saarland Informatics Campus, Germany)</i>	

Session 11C

Canonical Decompositions of 3-Connected Graphs	1887
<i>Johannes Carmesin (University of Birmingham, UK) and Jan Kurkofka (University of Birmingham, UK)</i>	
Proof of the Clustered Hadwiger Conjecture	1921
<i>Vida Dujmović (University of Ottawa, Canada), Louis Esperet (Laboratoire G-SCOP (CNRS, Univ. Grenoble Alpes), France), Pat Morin (Carleton University, Canada), and David R. Wood (Monash University, Australia)</i>	
Slicing all Edges of an n -Cube Requires $n^{2/3}$ Hyperplanes	1931
<i>Ohad Klein (Hebrew University, Israel)</i>	
Directed Acyclic Outerplanar Graphs Have Constant Stack Number	1937
<i>Paul Jungeblut (Karlsruhe Institute of Technology, Germany), Laura Merker (Karlsruhe Institute of Technology, Germany), and Torsten Ueckerdt (Karlsruhe Institute of Technology, Germany)</i>	

Session 12A

Sparsifying Sums of Norms	1953
<i>Arun Jambulapati (University of Washington, USA), James R. Lee (University of Washington, USA), Yang P. Liu (Stanford University, USA), and Aaron Sidford (Stanford University, USA)</i>	
Towards Derandomising Markov Chain Monte Carlo	1963
<i>Weiming Feng (UC Berkeley, USA), Heng Guo (University of Edinburgh, United Kingdom), Chunyang Wang (Nanjing University, China), Jiaheng Wang (University of Edinburgh, United Kingdom), and Yitong Yin (Nanjing University, China)</i>	
Uniqueness and Rapid Mixing in the Bipartite Hardcore Model (extended abstract)	1991
<i>Xiaoyu Chen (Nanjing University, China), Jingcheng Liu (Nanjing University, China), and Yitong Yin (Nanjing University, China)</i>	

Sampling from the Potts model at low temperatures via Swendsen–Wang dynamics	2006
<i>Antonio Blanca (Pennsylvania State University, USA) and Reza Gheissari (Northwestern University, USA)</i>	

Session 12B

Interior-Point Methods on Manifolds: Theory and Applications	2021
<i>Hiroshi Hirai (Nagoya University, Japan), Harold Nieuwboer (University of Amsterdam, The Netherlands), and Michael Walter (Ruhr University Bochum, Germany)</i>	
ReSQueueing Parallel and Private Stochastic Convex Optimization	2031
<i>Yair Carmon (Tel Aviv University), Arun Jambulapati (University of Washington), Yujia Jin (Stanford University), Yin Tat Lee (Microsoft Research), Daogao Liu (University of Washington), Aaron Sidford (Stanford University), and Kevin Tian (Microsoft Research)</i>	
The Bit Complexity of Efficient Continuous Optimization	2059
<i>Mehrdad Ghadiri (Georgia Tech, USA), Richard Peng (CMU, USA), and Santosh S. Vempala (Georgia Tech, USA)</i>	
Sparse Submodular Function Minimization	2071
<i>Andrei Graur (Stanford University, USA), Haotian Jiang (Microsoft Research, USA), and Aaron Sidford (Stanford University, USA)</i>	

Session 12C

On Symmetric Factorizations of Hankel Matrices	2081
<i>Mehrdad Ghadiri (Georgia Tech, USA)</i>	
Krylov Methods are (nearly) Optimal for Low-Rank Approximation	2093
<i>Ainesh Bakshi (Massachusetts Institute of Technology, USA) and Shyam Narayanan (Massachusetts Institute of Technology, USA)</i>	
Matrix Completion in Almost-Verification Time	2102
<i>Jonathan A. Kelner (Massachusetts Institute of Technology), Jerry Li (Microsoft Research), Allen Liu (Massachusetts Institute of Technology), Aaron Sidford (Stanford University), and Kevin Tian (Microsoft Research)</i>	
Faster Matrix Multiplication via Asymmetric Hashing	2129
<i>Ran Duan (Tsinghua University, China), Hongxun Wu (University of California, USA), and Renfei Zhou (Tsinghua University, China)</i>	

Session 13A

Query Lower Bounds for log-Concave Sampling	2139
<i>Sinho Chewi (Institute of Advanced Study, USA), Jaume de Dios Pont (University of California, USA), Jerry Li (Microsoft Research, USA), Chen Lu (Massachusetts Institute of Technology, USA), and Shyam Narayanan (Massachusetts Institute of Technology, USA)</i>	

Algorithmic Decorrelation and Planted Clique in Dependent Random Graphs: The Case of Extra Triangles	2149
<i>Guy Bresler (Massachusetts Institute of Technology, USA), Chenghao Guo (Massachusetts Institute of Technology, USA), and Yury Polyanskiy (Massachusetts Institute of Technology, USA)</i>	
The Full Landscape of Robust Mean Testing: Sharp Separations Between Oblivious and Adaptive Contamination	2159
<i>Clément Canonne (University of Sydney, Australia), Samuel B. Hopkins (Massachusetts Institute of Technology, USA), Jerry Li (Microsoft Research \ USA), Allen Liu (Massachusetts Institute of Technology, USA), and Shyam Narayanan (Massachusetts Institute of Technology, USA)</i>	
Faster High-Accuracy log-Concave Sampling via Algorithmic Warm Starts	2169
<i>Jason M. Altschuler (UPenn) and Sinho Chewi (IAS)</i>	

Session 13B

Optimal Algorithms for Bounded Weighted Edit Distance	2177
<i>Alejandro Cassis (Saarland University and Max Planck Institute for Informatics, Saarland Informatics Campus, Germany), Tomasz Kociumaka (Max Planck Institute for Informatics, Saarland Informatics Campus, Germany), and Philip Wellnitz (Max Planck Institute for Informatics, Saarland Informatics Campus, Germany)</i>	
Faster Algorithms for Text-to-Pattern Hamming Distances	2188
<i>Timothy M. Chan (UIUC, USA), Ce Jin (MIT, USA), Virginia Vassilevska Williams (MIT, USA), and Yinzhan Xu (MIT, USA)</i>	
All-Pairs Max-Flow is no Harder Than Single-Pair Max-Flow: Gomory-Hu Trees in Almost-Linear Time	2204
<i>Amir Abboud (Weizmann Institute of Science), Jason Li (University of California, Berkeley), Debmalya Panigrahi (Duke University), and Thatchaphol Saranurak (University of Michigan, Ann Arbor)</i>	
Why we Couldn't Prove SETH Hardness of the Closest Vector Problem for even Norms!	2213
<i>Divesh Aggarwal (National University of Singapore, Singapore) and Rajendra Kumar (Weizmann Institute of Science, Israel)</i>	

Session 13C

Covering Planar Metrics (and Beyond): $O(1)$ Trees Suffice	2231
<i>Hsien-Chih Chang (Dartmouth College, USA), Jonathan Conroy (Dartmouth College, USA), Hung Le (UMass Amherst, USA), Lazar Milenkovic (Tel Aviv University, Israel), Shay Solomon (Tel Aviv University, Israel), and Cuong Than (UMass Amherst, USA)</i>	
Planar and Minor-Free Metrics Embed into Metrics of Polylogarithmic Treewidth with Expected Multiplicative Distortion Arbitrarily Close to 1	2262
<i>Vincent Cohen-Addad (Google Research, France), Hung Le (University of Massachusetts Amherst, USA), Marcin Pilipczuk (University of Warsaw, Poland; IT University of Copenhagen, Denmark), and Michał Pilipczuk (University of Warsaw, Poland)</i>	

Path-Reporting Distance Oracles with Logarithmic Stretch and Size $O(n \log \log n)$	2278
<i>Michael Elkin (Ben-Gurion University of the Negev, Israel) and Idan Shabat (Ben-Gurion University of the Negev, Israel)</i>	

Session 14A

Deterministic Fully Dynamic SSSP and More	2312
<i>Jan van den Brand (Georgia Institute of Technology, USA) and Adam Karczmarz (University of Warsaw and IDEAS NCBR, Poland)</i>	
Local Computation Algorithms for Maximum Matching: New Lower Bounds	2322
<i>Soheil Behnezhad (Northeastern University), Mohammad Roghani (Stanford University), and Aviad Rubinfeld (Stanford University)</i>	
Secure Computation Meets Distributed Universal Optimality	2336
<i>Merav Parter (Weizmann Institute, Israel)</i>	

Session 14B

Distribution of the Threshold for the Symmetric Perceptron	2369
<i>Ashwin Sah (Massachusetts Institute of Technology, USA) and Mehtaab Sawhney (Massachusetts Institute of Technology, USA)</i>	
Properly Learning Decision Trees with Queries is NP-Hard	2383
<i>Caleb Koch (Stanford University, USA), Carmen Strassle (Stanford University, USA), and Li-Yang Tan (Stanford University, USA)</i>	
Beyond Moments: Robustly Learning Affine Transformations with Asymptotically Optimal Error.....	2408
<i>He Jia (Georgia Tech, USA), Pravesh K. Kothari (CMU, USA), and Santosh S. Vempala (Georgia Tech, USA)</i>	
Stability and Replicability in Learning	2430
<i>Zachary Chase (Mathematical Institute, Andrew Wiles Building, Radcliffe Observatory Quarter, UK), Shay Moran (Technion-IIT, Israel), and Amir Yehudayoff (Technion-IIT, Israel)</i>
