Table of contents

1.	Winding Technologies I	
1.1.	Flexible Manufacturing of High-value Low-volume Electrical Machines through Robotic Coil Winding Gianmarco Pisanelli, AMRC (GB).....	2
4.	Contacting Technologies	
4.1.	Approach for the Development for an Adaptive Vacuum Laser Welding Process for Hairpin Stators Using Supervised Learning Yazan Bajah, PEM of RWTH Aachen University (DE).....	14
5.	Technologies for Permanent Magnet Rotors II	
5.1.	Wave Spring-Based Magnet Fixations for Electric Traction Motors Markus Heim, Karlsruhe Institute of Technology (KIT) (DE)	26
6.	Trends in Production Processes for Electric Drives II	
6.1.	Prototype fabrication of complex cooling channels by potting, additively manufactured inserts in an electric motor Leonard John, Fraunhofer ICT (DE).....	36
6.2.	Robotic based Assembly of insulating Sleeves onto Winding Coil Ends of Electric Drive Stators Alexander Mahr, University of Erlangen-Nuremberg (FAU) (DE)	42
8.	Trends in Electric Machine Design	
8.1.	An overview of design and calculation of a synchronous-reluctance machine Michael Schmidt, Technische Hochschule Nürnberg Georg Simon Ohm (DE)	52
8.2.	Design of Shaped Electric Machine Windings to Reduce Ohmic Losses Israel Luna Acevedo, General Electric Deutschland Holding GmbH (DE)...	60
8.3.	Segmented exterior-rotor PMSM for increased torque density Timo Wilfling, Technische Hochschule Nürnberg Georg Simon Ohm (DE)..	68
9.	Trends in Production Processes for Electric Drives III	
9.1.	Analysis of the Influence of Various Bending Parameters on the Resulting Electrical Properties of Bent Hairpins Henrik Christoph Born, Chair of Production Engineering of E-Mobility Components (DE).....	78

10.	Soft Magnetic Materials I	
10.1.	Residual stresses and magnetic material properties of embossed and cut magnetic flux barriers in nonoriented electrical steel under tensile load Ines Gilch, Technische Universität München (DE).....	88
10.2.	Influence of high-speed impact cutting on the electromagnetic properties of non-oriented electrical steel sheets Jonas Matt, Mercedes-Benz AG (DE).....	96
10.3.	Influence of the machining conditions on the lifetime under cyclic loading of non-grain-oriented electrical steel strips Patrick Schwarz, Hochschule Esslingen, University of Applied Sciences (DE).....	102
11.	Hairpin Stators	
11.1.	Parameter Study on Bending of Rectangular Copper Hollow Wire for the Use in Hairpin Stator Electric Traction Motors Till Augustin Backes, Chair of Production Engineering of E-Mobility Components RWTH Aachen University (DE) and Dr.-Ing. Raad Al-Kinani, dynamic E flow GmbH (DE).....	110
11.2.	Approach for Flexible Gripping and Sequential Alignment of Hairpin Baskets Felix Fraider, Karlsruhe Institute of Technology (KIT) (DE).....	117
11.3.	Calculation of Process Parameters for the Twisting of Stators with Hairpin Winding Ludwig Hausmann, Karlsruhe Institute of Technology (KIT) (DE).....	124
12.	Trends in Production Processes for Electric Drives IV	
12.1.	Methodology for the Implementation of a Consistent Information Model for the Electric Drives Production Nicolaus Klein, wbk Institute of Production Science Karlsruhe Institute of Technology (KIT) (DE)	134
12.2.	Closed-Loop Process Control for Sequential Tool-Bound Bending of Hairpin Coils Felix Wirth, Karlsruhe Institute of Technology (KIT) (DE)	142
13.	Soft Magnetic Materials II	
13.1.	Systematic Qualification of Layer Thickness, Roundness and Defects of Screen-printed Magnetic Sheets Alexander Schmidt, University of Erlangen-Nuremberg (FAU) (DE)	152
13.2.	Manufacturing processes for 2.5D laminated stacks Dr. Lloyd Tinkler, The University of Sheffield (GB).....	158

14.	Winding Technologies II	
14.1.	A comparison between continuous and hairpin windings for electric traction drives Marta Marijuan, GKN Automotive (ES).....	166
14.2.	Comparison of Optimized Hairpin and Pull-in Winding High-Speed Electrically Excited Synchronous Machines for Traction Applications Samar Singh, Mercedes-Benz AG (DE).....	174
15.	Data-Driven Approaches in Electric Drives	
15.1.	Reinforcement Learning Control of Six-Phase Permanent Magnet Synchronous Machines Lara Broghammer, Technische Hochschule Nürnberg (DE).....	184
15.2.	Cognitive Power Electronics for Detection of Demagnetization in Electric Drives Christoph Blechinger, Fraunhofer Institute for Integrated Systems and Device Technology IISB (DE)	192
15.3.	Efficient Calibration of LPTN Models for Digital Twins of ePowertrain Motors Jon Garcia Urbieto, GKN Automotive (ES).....	199
16.	Soft Magnetic Materials III	
16.1.	Temperature influence on core losses and magnetization demand of electrical steel sheets using adapted Epstein frame and ring probe Martin Regnet, TH Nürnberg GSO (DE)	210
17.	Innovative Conductors	
17.1.	Technological Study of mechanical, electrical, and thermal Characteristics for Profiled High Frequency Litz Wires for Traction Motor Applications Dr. Florian Sell-Le Blanc, Schaeffler Automotive Buehl GmbH & Co. KG (DE), Volkmar Platte, Elektrisola Dr. Gerd Schildbach GmbH & Co. KG	220
17.2.	Comparative Conductor Design Study of Processing and Insulation Characteristics for Continuous Hairpin Stators Using Profiled High Frequency Litz Wires Dr. Florian Sell-Le Blanc, Schaeffler Automotive Buehl GmbH & Co. KG (DE), Volkmar Platte, Elektrisola Dr. Gerd Schildbach GmbH & Co. KG	229
17.3.	Optimized Electromagnetic Compatibility by New Motor Cable Design Stefan Hilsenbeck, LAPP Holding SE (DE)	241

18. Induction Technologies

- 18.1. Analysis of induction-based thermal demagnetization of a permanent magnet rotor in the context of recycling
Thorsten Ihne, University of Erlangen-Nuremberg (DE)252

19. Scientific Poster Session

- 19.1. Methodology for the Mechanical Characterization of Rectangular Winding Wire in the Context of Electric Mobility
Felix Wirth, Karlsruhe Institute of Technology (DE).....260
- 19.2. Influence of Cable Lug Properties on the Torsional Ultrasonic Crimping Process of High-Frequency Litz Wires
Johannes Seefried, University of Erlangen-Nuremberg (DE).....269
