TABLE OF CONTENTS

KEYNOTES

Cell Culture Engineering - and What This Means for the Future of Medicine.....	1
<i>Alison Moore</i>	
Human Gene Therapy - Principles, History, State of the Art, Challenges and Approaches for Mitigation	2
<i>Guangping Gao</i>	

AWARD LECTURES

Cell Culture and Social Engineering	3
<i>Manuel Carrondo</i>	
Accelerated Process Development and Commercialization - Bringing Life-saving Drugs to Market	5
<i>Pooja Jambunathan</i>	

SESSION 1: MULTISPECIFIC MODALITIES COMMERCIALIZATION SUCCESSES & FUTURE TRENDS

Continuous Improvement in Bispecifics Manufacturing: Advantages and Disadvantages of 2-Cell Vs. 1-Cell Culture Process	6
<i>Jessica Wu</i>	
Cellular Demands of Secreted Protein Products – Systems and Synthetic Biology Improve Quality and Titer.....	7
<i>Johan Rockberg</i>	
Insights into Bispecific Antibody Development, Characterization, Andmanufacture	8
<i>Latonia Harris</i>	
Building One Block at a Time Toward Complex Biologics Using Cell-Free Protein Synthesis Process.....	9
<i>Marcella Yu</i>	
Transforming Molecule Selection and Process Development Through Attribute Focus and the Deployment of High-Performance Computing Tools.....	10
<i>Neeraj Agrawal</i>	
Regeneron Bispecific Molecule Structure Begets Platform Production Process Compatibility.....	11
<i>Shawn Lawrence</i>	
Challenges and Successes in Developing and Manufacturing Multiple Formats of Bispecific Antibodies	12
<i>Weichang Zhou</i>	

SESSION 2: CELL LINE DEVELOPMENT CURRENT STATE AND FUTURE DIRECTIONS

Cell Line Technologies for Speed-To-clinic and Commercial Production of Biologics.....	13
<i>Gang Chen</i>	
Chromosomal Instability Drives Convergent and Divergent Evolution Toward Advantageous Inherited Traits in Mammalian CHO Bioproduction Lineages.....	14
<i>Meiping Chang</i>	
What's in a Phenotype?.....	15
<i>Nicole Borth</i>	
Newly-Established Chinese Hamster-derived Cell Line for Protein Production.....	16
<i>Takeshi Omasa</i>	
Engineering of Chinese Hamster Ovary Cell Lipid Metabolism Results in an Expanded ER and Enhanced Recombinant Biotherapeutic Protein Production.....	17
<i>James Budge</i>	

SESSION 3: SYSTEMS AND SYNTHETIC BIOLOGY FOR IMPROVED CELL CULTURE

The microRNA Landscape of the Extracellular Vesicles Generated by Chinese Hamster Ovary Cells Under Normal and Stressed Conditions	18
<i>Eleftherios Papoutsakis</i>	
GalMAX: Model-Inspired Glycoengineering for Biopharmaceutical Quality Assurance.....	19
<i>Ioscani Jiménez Del Val</i>	
Systems and Synthetic Biology Approaches Towards Optimization of N- Glycan Sialylation.....	20
<i>Jack Scarcelli</i>	
Metabolic Engineering of High-Productivity CHO Host Lines for Biomanufacturing.....	21
<i>Jamey Young</i>	
Biologics 4.0: Emergence of the CHO Biofoundry	22
<i>Lars Nielsen</i>	
Feedback-Responsive Cell Factories for Biomanufacturing	23
<i>Laura Segatori</i>	
What Does a Cell Need for Efficient Protein Secretion: Deciphering, Modeling, and Augmenting the CHO Machinery	24
<i>Nathan Lewis</i>	
Synthetic Cell Lines for Recombinant AAV Production	25
<i>Wei-Shou Hu</i>	
Transcriptomics Guided Mechanistic Metabolic Model for Perfusion Culture Process.....	26
<i>Veronique Chotteau</i>	

SESSION 4: ANALYSIS AND CONTROL OF CELL CULTURE-BASED MANUFACTURING

Advanced Control of Glycosylation and Titer in Fed-Batch Monoclonal Antibody Production.....	27
<i>Anne Robinson</i>	

Effective Cell Culture Operations by Implementing Accurate, Non-Invasive Determination of the Critical Process Parameter pH in Roche’s Drug Substance Network.....	28
<i>Christian Klinger</i>	
Real-Time Data-driven and Multi-scale Model-guided System for Bioprocess Digital Twin Platform.....	29
<i>Dong-Yup Lee</i>	
Upstream Control Strategy Development for Afucosylated Species in mAb Biomanufacturing	30
<i>Jianlin Xu</i>	
Bioreactor Scale Induced Alteration in Cell Metabolic State Can Impact Amino Acid Misincorporations in Recombinant Proteins Produced in CHO Cells.....	31
<i>Shanta Boddapati</i>	
Machine Learning and Advanced Data Analytics Automating the Exploitation of Raman Spectroscopy: from Micro-Scale to Large-Scale Operation.....	32
<i>Stephen Goldrick</i>	

SESSION 5: CCE FOR CELL-BASED THERAPIES

Adaptive T Cell Processing Through Integrated Process Analytical Technologies.....	33
<i>Ivie Aifuwa</i>	
Process Analytical Utility of Raman Spectroscopy for Cell Therapy Manufacturing	34
<i>James Piret</i>	
A Soft Sensor of Cell Concentration in a Perfusion Bioreactor Via a Digital Twin	35
<i>Joseph Egan</i>	
Rapid, Scalable, Cost-Effective Process for Generation of Stably Integrated Chimeric Antigen Receptor (CAR) Engineered T-cells by “Gene Writing”: An All RNA Approach, Without Need for Use of Viral Vectors Or Nucleases	36
<i>Madhusudan V. Peshwa</i>	
Advancing Manufacture of hiPSC-Derived Hepatocytes with Improved Functionality: A Nature-inspired Protocol.....	37
<i>Margarida Serra</i>	
AI-Enabled Biomanufacturing	38
<i>Stephen Balakirsky</i>	
Engineered T-Cell Therapy: State of the Science	39
<i>Susan Abu-Absi</i>	
Differential Effects on Natural Killer Cell Production by Membrane-bound Cytokine Stimulations	40
<i>Zhimei Du</i>	

SESSION 6: PRODUCTION OF VIRAL VECTORS AND OTHER EMERGING THERAPEUTIC MODALITIES

Overcoming Barriers in Viral Vector Manufacturing: Small Molecule Targeting of Antiviral Defences	41
<i>Jean-Simon Diallo</i>	

Scalable, Serum-Free Cell Culture Platform for Improved Production of Diverse Live Virus and Viral Vector Vaccine Candidates	42
<i>James Wagner</i>	
Advancing the Productivity, Robustness, and Scalability of AAV Production Process by Transient Transfection in Suspension Cell Culture	43
<i>Jenny Shupe</i>	
Development of a Second-Generation Lentiviral Vector to Reduce COGM While Meeting Both Vector and CAR T Cell CQAs.....	44
<i>Julia Proctor</i>	
A Hot New Bioprocess Strategy to Improve Small EV Production	45
<i>Kerstin Otte</i>	
Development of a Subclonal Host Cell Line for AAV Production	46
<i>Saurabh Sen</i>	

SESSION 7: CELL CULTURE FOR INTEGRATED AND CONTINUOUS BIOPROCESSING

Ultra-Intensified Intermittent-perfusion Fed-batch (UIIPFB) Process Quadrupled Productivity of a Bispecific Antibody	47
<i>Jun Tian</i>	
Scaleable Microscale Perfusion Systems for Yeast and Mammalian Cells to Accelerate Process Development of Bioproducts.....	48
<i>María Del Carme Pons Royo</i>	
Development of a Highly Concentrated Perfusion Medium Supplement to Decrease Media Demand Leveraging a Newly Designed 250 mL Single Use Perfusion Bioreactor	49
<i>Mona Bausch</i>	
Maintaining Productivity Over Extended Durations for Perfusion Processes	50
<i>Paul Gramlich</i>	
On Digital Bioprocessing for Manufacturing Intelligence: Application of Process Analytical Technology (PAT) and Process Data Analytics (PDA) for Upstream Process Development and Intensification.....	51
<i>Ricardo Suárez-Heredia</i>	

POSTER SESSION

Case Study: Optimization Stage of a Bispecific DART® Molecule Identified Dissolved Carbon Dioxide (dCO ₂) is a Critical Upstream Process Parameter for Growth, Productivity and Scalability	52
<i>Nathalie Gerassimov</i>	
The Impact of Expression Vector Position on Transgene Transcription Allows for Rational Expression Vector Design in a Targeted Integration System	53
<i>Kathryn Beal</i>	
Co-Culturing Cell Lines for Efficient Manufacture of Multispecifics.....	54
<i>Dawn Eriksen-Stapleton</i>	
Analysis of Production Bottlenecks in BiTE® Molecules Producing CHO Cells	55
<i>Tobias Jerabek</i>	

From Nanoliter to Large-Scale Bioreactors: How Integrated Technologies Bring Antibody Treatments to Patients Faster.....	56
<i>Véronique Lecault</i>	
Fast Track Fed-Batch Culture Development for COVID-19 Vaccine Clinical Study.....	57
<i>Joon-Chul Lee</i>	
Polyclonal Production of Antibodies Using CHO Cell Line Mixtures.....	58
<i>Anna Christina Adams</i>	
Designing a Highly Productive Next Generation CHO Fed Batch Platform.....	59
<i>Kyle McElearney</i>	
Rescue Protein Production with Effector Gene Determination in CHO Cells.....	60
<i>Ece Cagdas</i>	
Design, Expression, and Characterization of an Asymmetric Bispecific Antibody Fused to a scFv Shuttle for Brain Uptake.....	61
<i>Juan Carlos Rivera</i>	
Designing a CHO Protein Production Platform Using Multi-Omics Technology.....	62
<i>Chengjian Tu</i>	
Streamlining T Cell Engager Development with a Diverse Panel of Fully Human CD3-Binding Antibodies, Bispecific Engineering Technology, and an Integrated Discovery Engine.....	63
<i>Swapnil Bhargava</i>	
Mitigating Development Risk of Complex Modalities During Early-Stage Cell Line Development.....	64
<i>Ren Liu</i>	
Fucosylation Inhibitor Development for Producing Afucosylated Antibodies.....	65
<i>Lakshmi Kandari</i>	
A Production-Adapted, Multi-Auxotrophic, CHO Cell Line for Reducing Monoclonal and Bispecific Antibody Cell Line Development Timelines.....	66
<i>James Ravellette</i>	
High Throughput Analysis for Cell Line Development.....	67
<i>Saloni Khurana</i>	
Process for Generation of High-Producing CHO Cell Lines for Biomanufacturing of Biologics Using Our CHOrcTA Platform.....	68
<i>Simon Joubert</i>	
Identifying Early Predictors of Instability in CHO Cell Lines Using the Berkley Lights Beacon® Optofluidic System.....	69
<i>James Donaldson</i>	
Engineering Chinese Hamster Ovary Cells for Enhanced Protein Secretion.....	70
<i>Mauro Torres</i>	
Power of Platform to Accelerate Therapies Beyond a Pandemic.....	71
<i>Ronan Kelly</i>	
Engineering CHO Cell Lines for the Production of Biosimilars of Murine Cell Derived Reference Products.....	72
<i>Shivani Gupta</i>	

Novel Directed Evolution Platform for Creating High-Productivity Cells for Therapeutic Protein Production, Virus Production, and Other Processes	73
<i>Larry Forman</i>	
A Novel System for Glycosylation Engineering by Natural and Artificial Micornas	74
<i>Kerstin Otte</i>	
Fine Tuning of Plasmid Design to Generate Tailored CHO Cell Lines for Production of Bi- and Multispecifics	75
<i>Anett Ritter</i>	
Rebuilding CHO Again and Again: Development of a Species Agnostic Modular Cell Line Development Platform for Cultivated Meat	76
<i>Kim Le</i>	
Modulation of Sialic Acid Content for Enzyme Fusions Using Combinatorial Approach of Cell Line Engineering and Process Development	77
<i>Yashas Rajendra</i>	
High Yielding Large-Scale Transient Expression of Biotherapeutics in CHO: Beyond Preclinical Development	78
<i>Anurag Khetan</i>	
Omics-Based Characterization of Random Transgene Integration Sites from CHO Production Cell Lines	79
<i>Sofie O'Brien</i>	
High ER Content and Upregulated UPR Pathway Render a Unique CHO Host with High Antibody Productivity and Product Quality	80
<i>Ren Liu</i>	
Engineered Transposon for Improved Cell Line Development	81
<i>Kristi Daris</i>	
Characterization of Extrachromosomal Circular DNA (eccDNA) Structure, Function, and Dynamics in a CHO K-1 Clone	82
<i>Dylan Chitwood</i>	
Identification of Transgene Integration Sites, Their Structure and Epigenetic Status with Cas9-Targeted Nanopore Sequencing in CHO Cells	83
<i>Nicolas Marx</i>	
Genome-Wide CRISPR-Cas9 Screen Identifies Hyperosmotic Stress Responsive Genes in Chinese Hamster Ovary Cells	84
<i>Su Hyun Kim</i>	
NextGen Sequencing (NGS) Platform and Applications in Cell Line Development	85
<i>Ying Shen</i>	
Characterization of Neutralizing Human Anti-Tetanus Monoclonal Antibodies Produced by Stable Cell Lines	86
<i>Ana Maria Moro</i>	
Finding the Ideal: Single-Cell Cloning and Seamless Media Transitions	87
<i>Michelle Sabourin</i>	

Automation of a Cell Culture Process with Lager Vessels	88
<i>Tibor Anderlei</i>	
Enhancing Recombinant Protein and Viral Vector Production in Mammalian Cells by Targeting the YTHDF Readers of N6-methyladenosine in mRNA	89
<i>Niall Barron</i>	
CRISPR Activation Screening of Dormant Genes to Improve Secretory Capacity in CHO Cells	90
<i>Johan Blatt Rojek</i>	
Dynamic Regulation of Mitochondrial Metabolism as a Strategy to Maximize mAb Production in Industrial CHO Cell Cultures	91
<i>Kevin Ruiz-Marquez</i>	
Transposase-Mediated Transgene Integration for Rapid Generation of High-producing Stable Cell Lines	92
<i>Lauren Kraft</i>	
Applying Synthetic Biology and Computational Biology to Advance Biologics Expression Platforms	93
<i>Haewon Chung</i>	
Development of a High Throughput CHO Cell Glycosylation Enzyme Mrna Expression Profiler	94
<i>Shivani Gupta</i>	
Use of Stable CHO Pools and CHO TGE to Accelerate SARS-CoV-2 Vaccine Development	95
<i>Yves Durocher</i>	
Novel Cell Engineering Platform for Increasing Specific Productivity of CHO Cells for Therapeutic Antibody Production in Fed-Batch Cultures.....	96
<i>Kathy Ngo</i>	
Cell Lines Development Through Targeted Integration Involving a CRISPR-Mad7-based System in CHO-DG44	97
<i>Dubhe Beatriz Bulte Ocaña</i>	
Transcriptional Response to Recombinant Protein Production in Isogenic Multi-Copy CHO Cells.....	98
<i>Giulia Scapin</i>	
A Microplate-Based Assay for Analyzing Purity and Mispairing of Bispecifics and Other Complex Molecules in Cell Culture Samples	99
<i>Sebastian Giehring</i>	
Prediction of CHO Cell Line Stability Using Expression of DNA Repair Genes	100
<i>Lauren Cordova</i>	
Methylation Inhibition for Coping with Epigenetic-Based Heterogeneity of CHO Cell Subclones and Improving Recombinant MAB Production.....	101
<i>Octavio Ramirez</i>	
Simultaneous Genetic Engineering and Culture Media Manipulation Improve rh-EPO Productivity Through Lactate Re-metabolization on CHO Cell Culture	102
<i>Oscar Gatica</i>	
Further Accelerating Cell Line Development and CMC Timeline: The Journey from COVID to non-COVID Programs.....	103
<i>Sam Zhang</i>	

High-Throughput Clone Ranking Method for Rapid Clone Selection	104
<i>Zoe Horton</i>	
Hybrid Cell Line Development System Utilizing Site-Specific Integration and Methotrexate-Mediated Gene Amplification in Chinese Hamster Ovary Cells	105
<i>Jae Seong Lee</i>	
A Mathematical Modeling Framework for Determining the Probability of Obtaining a Clonally-Derived Mammalian Cell Line	106
<i>Jennitte Stevens</i>	
Development of a High-Density CHO-C System Enables Rapid Protein Production in 10 Days.....	107
<i>Joyce Chao-Yi Teng</i>	
Subcellular Fractionation Coupled to Shotgun Proteomics Allows the Identification of Novel Targets of the Classical Secretion Pathway Associated with Increased Productivity in Recombinant CHO Cells	108
<i>Norma A. Valdez-Cruz</i>	
CRISPR/Cas9 as a Tool to Correct Point Mutations in a Recombinant Monoclonal Antibody Gene in the Genome of CHO Cells.....	109
<i>Daniel Barreto-Cabrera</i>	
Assessment of Cloning Efficiency and Error Rates of Different Single-Cell Dispensing and High-resolution Imaging Technologies.....	110
<i>Olga Rimkevich</i>	
Investigating "Difficult-To-Express" mAb Frameworks in Transient and Site-specific Integration-based CHO Expression Systems.....	111
<i>Alana Szkodny</i>	
Enabling Pandemic Speed to Clinic for SARS-CoV2 Neutralizing Antibodies	112
<i>Peter Onyskiw</i>	
Profiling lnc-RNA in CHO Cells Using NGS Technologies	113
<i>Caterina Ruggeri</i>	
Beyond Exponential Phase: Metabolic Phenotypes in the Stationary Phase of CHO Cell Cultures	114
<i>Jerneja Štor</i>	
Slowly Co-Fluctuating Gene Expression Patterns Are Heritable and Associated with Stress Resistance and Improved Productivity in CHO Cell Line Development	115
<i>Mark Blenner</i>	
Blueprint from Nature: Multi-Omics Comparison of CHO and Plasma Cells Unveils Novel Cell Engineering Targets to Improve Productivity.....	116
<i>Linus Weiss</i>	
From Observational to Actionable: Rethinking Omic Studies in Biopharmaceutical Protein Production	117
<i>Hooman Hefzi</i>	
Investigation of the Role of Ubiquitination in ER Stress Mechanisms in Recombinant CHO Cells.....	118
<i>Paula Meleady</i>	
Role of TXNIP in Metabolic Shift to Lactate Consumption in CHO Cell Fed-Batch Cultures.....	119
<i>Bhanu Chandra Mulukutla</i>	

Workflow for Mining Process Relevant Knowledge from Transcriptomics	120
<i>Meeri Mäkinen</i>	
Model-Based Medium Optimization Methodologies in High-cell Density Perfusion Culture.....	121
<i>Mirko Pasquini</i>	
Learning Mechanistic Metabolic Models with Small Datasets	122
<i>Yen-An Lu</i>	
Leveraging Single-Cell and Bulk Transcriptomics Towards Improved Insect Cell Factories for Biopharmaceuticals	123
<i>Filipa Moura</i>	
Integrated Platform for High-Throughput Media Optimization	124
<i>Dirk Mueller</i>	
Amino Acid Degradation Pathway Inhibitors Trigger Apoptosis in Chinese Hamster Ovary Cells.....	125
<i>Veronica Martinez</i>	
Improving Bone Morphogenetic Protein Production in CHO Cells by Understanding Its Maturation, Signaling, and Endocytosis	126
<i>Gyun Min Lee</i>	
NEXT-FLUX (Neural-net EXtracellular Trained Flux Constraints)	127
<i>Benjamin Strain</i>	
Targeted DNA Methylation of Endogenous Promoters and the CMV Promoter Entails Distinct and Subsequent Histone Modification Changes in CHO Cells	128
<i>Nicolas Marx</i>	
Comprehensive Meta-Analysis of the CHO Coding Transcriptome	129
<i>Markus Riedl</i>	
Establishment and Application of a Multiomics Systems Biology Approach for Cell Culture Process Development and Optimization.....	130
<i>Chris Lowe</i>	
Metabolic Engineering of CHO Cells Towards Cysteine Prototrophy	131
<i>Laura Greenfield</i>	
Screening of Chemically Defined Basal and Feed Media Formulations for IgM Production	132
<i>Abhinav Rabindra Jain</i>	
Enhancing CHO Cell Productivity Through a Novel Dual Selection System Using Aspg and Gs in Glutamine Free Medium.....	133
<i>Nathan Lewis</i>	
Mechanistic Insights into the Metabolization of S-Sulfocysteine by CHO Cells Using a Multi- omics Approach.....	134
<i>Melanie Nguyen</i>	
Genome-Scale Modelling of Resource Allocation in CHO Cell Metabolism	135
<i>James Morrissey</i>	
Using Next-Generation Sequencing Technology, RNA-Seq, to Understand the Chinese Hamster Ovary (CHO) Cell Transcriptome Under Industrially Relevant Conditions.....	136
<i>Benjamin Synoground</i>	

Design of Experiments Guided Control of Waste Inhibitory By-Products in High Density CHO Cell Cultures	137
<i>Pranay Ladiwala</i>	
Intracellular Factors Influencing Protein Aggregation in CHO Cell Culture	138
<i>Krishnakumar Malu</i>	
A User-Friendly Tool Using Systems Biology Models to Infer Cell Functions from Omics	139
<i>Helen Masson</i>	
Multi-Omics Strategy for Cell Culture Medium Optimization in Fed-Bach CHO Cell Cultivation	140
<i>Chengjian Tu</i>	
Advanced Cell Culture Performance by Rational Media Design Based on in Depth Process Understanding	141
<i>Jochen Schaub</i>	
Elucidating Dipeptide Utilization and Metabolism by CHO Cells for Improved Cell Culture Performance.....	142
<i>Xiangchen Cai</i>	
Precision Editing of the CHO Genome Via CRISPR-Based Prime Editing: Progress and Challenges	143
<i>Nicholas Sandoval</i>	
Scale-Down Model Qualification Study Identifies Parameters to Improve Full-scale Robustness.....	144
<i>Abasha Williams</i>	
Feedback Control of Intensified Fed-Batch Mammalian Cell Culture Using Inline Raman Spectroscopy	145
<i>Thaddaeus Webster</i>	
Loss of Cell Viability is Tracked by Decreased Cytoplasmic Conductivity	146
<i>Michael Butler</i>	
A Completely Automated High Inoculation Density Fed Batch Process that Accommodates Clonal Diversity and Routinely Doubles Space Time Yield as Compared to Low Inoculation Density Processes	147
<i>Brandon Downey</i>	
Development of a New Control Strategy Based on Prior Knowledge that Enables Rapid and Streamlined Process Characterization	148
<i>Michael Handlogten</i>	
Robust Cell Culture Performance Facilitated by Comprehensive Equipment Characterization – the Importance of Hydrodynamic Stress	149
<i>Thomas Wucherpennig</i>	
Getting a Foot in the Door: Implementing Online Cell Growth Monitoring in Manufacturing for Both Legacy and New Processes.....	150
<i>Alexandra Tsoras</i>	
Introducing Seahorse Analyzer to Mammalian Cell Culture Process Development	151
<i>Mitch Raith</i>	
Multivariate Data Analysis of GMP Cell Culture Bioprocessing in Pfizer.....	152
<i>Guogang Dong</i>	

Fully-Automated Bioreactor Process Control Eliminates Hands-on Time Through Closed-loop Cloud Software Integration.	153
<i>Adam Carcella</i>	
A Scalable 3D Printed Bioreactor for the Expansion of Anchorage-Dependent Stem Cells	154
<i>Nicholas McMahon</i>	
Achieving Product Quality Targets While Maintaining High Titer in CHO Cell Culture Processes.....	155
<i>Ryan Graham</i>	
Improving Iron Tolerance and CHO Cell Culture Performance Via Adaptation in High-Iron Chemically Defined Media.....	156
<i>Karthik Jayapal</i>	
Hybrid Dynamic Model of Monoclonal Antibody Production Using CHO Cells	157
<i>Mariana Monteiro</i>	
Quantitative Assessment of Desirability of Platform Cell Culture Media.....	158
<i>Kimberly Curtis</i>	
Integrated Microfluidics for At-Line Culture Monitoring of Proteins and Metabolites	159
<i>Meeri Mäkinen</i>	
Developing a Control Strategy for Sequence Variants	160
<i>Amy Johnson</i>	
Short Chain Fatty Acids Produced by CHO Cells Enhance Their Specific Productivity in Fed-Batch Cultures	161
<i>Cameron Harrington</i>	
Image-Based Machine Learning Model Development of Cell Culture Attributes in Bench Top Bioreactors.....	162
<i>Joseph Fantuzzo</i>	
Understanding the Impact of High Gas Entrance Velocity on CHO Cell Culture Processes to Improve Process Scale Up.....	163
<i>Robin Luo</i>	
NAD ⁺ Supplementation Improves mAbs Productivity in CHO Cells Via a Glucose Metabolic Shift	164
<i>Jong Youn Baik</i>	
A Less-Traveled Path for Data in Bioprocess Development: from Dynamic Experiments to Dynamic Process Models	165
<i>Yu Luo</i>	
Explore a Probabilistic Network Model Application for Biopharma Manufacturing Process.....	166
<i>Jun Luo</i>	
The Power of At-Line Amino Acid Measurements for Accelerated Process and Media Development of a mAb-expressing CHO Cell Line	167
<i>Graziella Piras</i>	
Challenges We Just Couldn't IgG-Nore: Case Studies of Process Optimization for Next-Generation, Highly Engineered Multispecifics	168
<i>Michael Dolan</i>	

Modeling the Effect of Gradients on Cell Culture Performance in Various Large Scale Bioreactors	169
<i>Katherine Raudenbush</i>	
Modeling the Effect of Bioreactor pH on Chinese Hamster Ovary (CHO) Cell Metabolism and Site-Specific N-linked Glycosylation of VRC01.....	170
<i>Jayanth Venkatarama Reddy</i>	
Targeted Modulation of Biochemical Pathways to Optimize the Balance Between Productivity and Product Quality in Biosimilars	171
<i>Rama Bhupal Reddy Kandula</i>	
Modulation of Product Quality of Biosimilars Using Metabolic Modelling to Achieve Robust Process Control.....	172
<i>Suman Bandyopadhyay</i>	
Peptide-Based Solutions to Reduce Undesired Cell Culture Media Chemistry – New Options for Stabilized Media Formulations.....	173
<i>Martin Schilling</i>	
Achieving Desirable Product Quality by Modulating Cell Culture Via Real Time Analysis	174
<i>Meena George</i>	
Achieving Product Quality Comparability While Making Cell Culture Process Changes.....	175
<i>Eleanor Oates</i>	
Development of Real-Time Monitoring System and Data-driven Digital Twin Models for Forecasting Multi-step Ahead Cell Culture Performance.....	176
<i>Seo-Young Park</i>	
Upstream Process Development Approach to Selectively Reduce One Or More Unpaired Cysteines of a Monoclonal Antibody.....	177
<i>Coralie Borrossi</i>	
Validation of the Model-Based Cell Culture Media Design Platform “CELIA” for Biomass and Product Optimization in a Bioreactor Setting.....	178
<i>Ziomara P. Gerdtzen</i>	
Next-Gen Glycoengineering: Combining Cellular and Metabolic Engineering to fine-tune β 1,4-Galactosylation.....	179
<i>Apostolos Tsopanoglou</i>	
Lectin-Aided Flow Cytometry Reveals a Close Correlation Between Cell Surface and mAb Glycosylation- Aided Flow Cytometry Reveals a Close Correlation Between Cell Surface and mAb Glycosylation.....	180
<i>Apostolos Tsopanoglou</i>	
CHO Stable Pool Fed-Batch Process Development of SARS-CoV-2 Spike Protein Production	181
<i>Juan Sebastian Reyes Davila</i>	
Synthetic Cell Lines for Recombinant AAV Production	182
<i>Min Lu</i>	
Small Scale Cell Culture Based Assay for Predicting Antibody Reduction Susceptibility	183
<i>Antonio Barberio</i>	

Quantitation of Amino Acids in Diverse Mammalian Cell Culture Media Types with the REBEL At-Line Analyzer.....	184
<i>Kenion Blakeman</i>	
Characterization of Cell Cycle and Apoptosis Using Flow Cytometry for Bioprocess Monitoring.....	185
<i>Xiaodan Ji</i>	
Achieving High Titer in a Non-Platform CHO Cell Culture Process When Converting to an Internal Medium Platform	186
<i>Tom Hayes</i>	
Real Time Monitoring of Commercial Manufacturing and Quality Control for Enhanced Process and Method Reliability	187
<i>Neeraj J. Agrawal</i>	
Amino Acid Analysis to Support a Genome-Scale Nutrient Minimization Forecast Algorithm for Controlling Essential Amion Acid Levels in CHO Cell Cultures.....	188
<i>Ji Young L. Anderson</i>	
Closing the Loop on Cell Culture Analyzer Variability.....	189
<i>Paul Steve</i>	
Dynamic pH Profiles Drive Higher Cell Specific and Volumetric Productivity.....	190
<i>Sarah Harcum</i>	
Accelerating Attribute-Focused Cell Culture Process Development Through the Deployment of an Automatic Assay Preparation Platform	191
<i>Chao-Hsiang Wu</i>	
Computer Simulations of the Shear Stress/energy Dissipation in Peristaltic Pumps.....	192
<i>Jeffrey Chalmers</i>	
Development of a High-Throughput Workflow for Upstream Process Control	193
<i>Michael Skoumal</i>	
Controlling pCO ₂ in High Density Perfusion Cultures.....	194
<i>Colin Jaques</i>	
At-Line Investigation of Capacitance for Assessing Biomass of Mammalian Cell Culture and Fixed Cell Calibration Standard	195
<i>An Zhang</i>	
Investigating Cell Culture Process Parameters and Galactosylation Using Media Buffering Experiment and Digital Twin Modeling	196
<i>Woo Suk Ahn</i>	
Cell Culture Oxygen Utilization as Orthogonal Measure of Biomass for Feed Control	197
<i>Christopher Jackman</i>	
Transcriptional and Metabolic Response of CHO Cells to Different Carbon Dioxide Concentrations.....	198
<i>Jorge Campano</i>	
Tracking Amino Acid Metabolism in CHO Cell Cultures Using Stable Isotope Labeling Assisted Metabolomics	199
<i>Maciek Antoniewicz</i>	

Developing Methodologies to Optimise Production of Recombinant Antibodies at Specific Phases of Chinese Hamster Ovary (CHO) Cell Culture.....	200
<i>Ellie Hawke</i>	
Model-Based Scale-up of CHO Cell Culture Process	201
<i>Emmanuel Anane</i>	
Understanding the Effect of Oxidative and ER Stress on CHO Cell Culture and Product Quality Through Multivariate Analysis.....	202
<i>Leran Mao</i>	
Lifecycle Management of a Commercial Platform Monoclonal Antibody Process: the Promise of ICHQ12	203
<i>Cillian McCabe</i>	
Combined Effect of Ammonia Stress and Cell Line Age on CHO Cell Derived VRC01 Monoclonal Antibody Glycosylation.....	204
<i>Nicholas Sandoval</i>	
DNA Sequence to a Million Doses of COVID-19 Therapeutic Antibody in 9 Months – Making the Seemingly Impossible, Possible	205
<i>Matthew D. Osborne</i>	
Characterization of Cellular Viability Drop During Media and Platform Development	206
<i>Vince Price</i>	
Expression of Stress Proteins During Fed Batch and Perfusion Cultures.....	207
<i>Claudia Berdugo</i>	
Real-Time Bioprocess and Automated Feed Control with In-line Raman Sensor.....	208
<i>Ching-Jen Yang</i>	
Mixing and Mass Transfer in Shake Flasks and Their Relationship with Antibodies Productivity of CHO Cells	209

Generation and Characterization of a Process-Specific HCP Reagent Using Stably Transfected Null Cell Pools	210
<i>Sven Loebrich</i>	
High Density Culture of Human Induced Pluripotent Stem Cells in Stirred Tank Bioreactors for Regenerative Therapies	211
<i>Jorge Escobar</i>	
From Product Microheterogeneity to Homogeneity Using Integrated Modeling Methodology and New Cell Culture Component	212
<i>Bassem Ben Yahia</i>	
Transient Expression of CHIKV VLP in Large Stirred Tank Bioreactors	213
<i>Peifeng Chen</i>	
Automation of an N-1 Perfusion Process Using BioCapacitance.....	214
<i>Abbey Weith</i>	
Multifunctional Surface Modifications to Capture and Expand Flowing Endothelial Colony-Forming Cells.....	215
<i>Corinne A. Hoesli</i>	

Design and in Vitro Validation of Smart Microcarriers for Next Generation Cell Culture.....	216
<i>Hugo Level</i>	
Proof-Of-concept of a Novel Scalable Magnetic Bead-based Cell Separation Technology	217
<i>Nils Brechmann</i>	
Immunocompetent Human 3D Brain Cell Cultures to Advance ATMP Development.....	218
<i>Catarina Brito</i>	
Novel Vertical-Wheel Bioreactors for the Scalable, Robust and Efficient Production of Shear-Sensitive Cell Therapy Products – Human Pluripotent Stem Cells (aggregate Culture) and Mesenchymal Stromal Cells (microcarrier Culture).....	219
<i>Matthew Croughan</i>	
Encapsulation of Mesenchymal Stem Cells and MCF-7 Cancer Cells in Aqueous Two-phase Systems Droplets for 3D Culture Applications.....	220
<i>Marco Rito-Palomares</i>	
Integration of Pancreatic Aggregates into BioSilk Network to Treat Diabetes	221
<i>Kelly Blust</i>	
Development of a Dynamic SH-SY5Y 3D Culture Model for Biological Evaluation of Alzheimer-induced Pathology	222
<i>Macarena Fernandez</i>	
Novel Cell Engineering Platform for Improving Production of AAV for Gene Therapy Applications	223
<i>Kathy Ngo</i>	
Environmental Footprint of Adherent Cell Culture Viral Vector Drug Substance Manufacturing Process.....	224
<i>Morgan Soukup</i>	
Advancing Large-Scale Production of MSC-derived Extracellular Vesicles Through Cellular Pre-conditioning and Enhanced Process Control	225
<i>Margarida Serra</i>	
A Scalable and Flexible Solution for Robust T Cell Expansion	226
<i>Jeffrey Mulkin</i>	
Simple and Convenient Method for Adipose-Derived Mesenchymal Stem Cells Serum-free Medium Development.....	227
<i>Joon-Chul Lee</i>	
Novel Impeller Design for Stem Cell Bioprocessing and Its Application in hMSC Stirred-Tank Bioreactor Cultures.....	228
<i>Tom Adam Wyrobnik</i>	
Towards the Design of a Feeder-Free System for Natural Killer Cell Expansion	229
<i>Janani Narayan</i>	
Ex Vivo Expansion and Differentiation of Erythroblasts: from Culture Dishes to Stirred Tank Reactors for the Production of Red Blood Cells.....	230
<i>George Barringer</i>	
Cell Therapy Process Development with a 2 mL Perfusion Bioreactor.....	231
<i>Ryan Trocki</i>	

Utilisation of Capacitance Measurement (dielectric Spectroscopy) to Monitor, Control and Improve Viral Vector and Virus-Based Vaccine Production	232
<i>Aditya Bhat</i>	
The Role of Extracellular Vesicles in the Modulation of the Cell Density Effect	233
<i>Jesús Lavado García</i>	
Continuous Harvesting of Retroviral Murine Leukemia Viral Vector Particles in a High Cell Density Perfusion Cultivation	234
<i>Marc Dominique Hein</i>	
Influenza A Virus OP7 Defective Interfering Particles: Cell Culture-Based Production and Antiviral Efficacy in Vivo.....	235
<i>Lars Pelz</i>	
Scaleable Transient Transfection of Intensified rAAV Production Processes.....	236
<i>Kathryn Olson</i>	
Towards Large-Scale Production of Human-induced Pluripotent Stem Cell-derived Extracellular Vesicles in Stirred-tank Bioreactors	237
<i>Ana Meliciano</i>	
Simplifying Manufacturing and Control of Dual Vector AAV Therapies.....	238
<i>Peter Slade</i>	
Expression of Anti-Apoptotic Genes to Enhance rAAV Production	239
<i>David Catalán-Tatjer</i>	
On the AAVenue to Success: Advances in Technologies for AAV Production.....	240
<i>Sandra Klausning</i>	
Exploring Alternative Oncogene-Free Mammalian Hosts for Adeno-associated Virus Production	241
<i>Seongkyu Yoon</i>	
Design Space Determination and Process Optimization of Product Quality Attributes in Transient rAAV Manufacturing.....	242
<i>Seongkyu Yoon</i>	
Process Improvements for AAV Production by Transient Transfection of HEK293 Cells.....	243
<i>Stephanie Doong</i>	
Hybrid Liposome-Extracellular Vesicles for Targeted Delivery of CRISPR/Cas9.....	244
<i>Jessica Belliveau</i>	
High Cell Density Perfusion Process for rAAV9 Production Based on Transient Transfection of HEK293 Cells.....	245
<i>Brian Ladd</i>	
Accelerating the Vero Vaccine Production Platform Through the Generation of High-Density Cell Banks and Direct Thaw into Microcarrier Bioreactor Cultures.....	246
<i>Samantha Marrone</i>	
The Effect of Cell Density on the Plasmid Utilization for the Production of Adeno-Associated Virus Via the Triple-transfection Method.....	247
<i>Brian Ladd</i>	

Suspension Like Scalability of rAAV9 Production in Adherent Cells.....	248
<i>Brian Ladd</i>	
Intensified Virus Production in Suspension HEK293SF Cells Using High Inoculum Fed-Batch Or Low-perfusion Rate Cultures with Continuous Harvest.....	249
<i>Cristina Silva</i>	
Scalable iPSC-Based Platform to Produce Tissue-specific Extracellular Vesicles	250
<i>Rachel Moen</i>	
Scale Up of Sf9/BEVS-Based AAV Production Process for GMP-manufacturing of Cardiovascular Gene Therapies.....	251
<i>Tae Won Chung</i>	
Medium- and High-cell-density Production of Adeno-Associated Virus Serotype 6 and the Mitigation of Cell Density Effect Via Medium Supplementation	252
<i>Pablo Diego Moco</i>	
Conditioned Medium Derived from Murine BM-MSCs Cultured as Spheroids Exhibit in Vitro Immunomodulatory Capacity.....	253
<i>Claudia Altamirano</i>	
Process Development and Scaleup Comparisons for Transient Production of AAV	254
<i>Michael Gillmeister</i>	
Developing rAAV Production Platform with Enhanced Productivity, Scalability and Biosafety.....	255
<i>Liyang Yang</i>	
Improved Production of Viru Like Particles of Cowpea Chlorotic Mottle Virus Using the Baculovirus Expression System	256
<i>Anayeli Martínez</i>	
HSC70/HSP40 Overexpression in Viral Vector-Producing Sf9 Cells Impacts AAV Productivity and Product Quality.....	257
<i>Juan Aponte-Ubillus</i>	
Large Scale Production and Purification of a Lentiviral Vector Reference Material.....	258
